PM4358 COMET OCTAL
8-Channel Combined E1/T1/J1 Transceiver/Framer

PRODUCT HIGHLIGHTS

- Programmable integrated termination: T1 100Ω, J1 110Ω, E1 120Ω, E1 75Ω.

- Internal support for redundancy (Y-cable) applications.

- Small footprint 256-pin fine pitch CABGA (17 mm by 17 mm) package.

- Low power dissipation of 165 mW per channel.

- 100% pin and software compatible with PM4359 COMET TETRA , software compatible with PM4351 COMET and PM4354 COMET QUAD.

- Software selectable between T1/J1 and E1 operation on a per device basis.

- Provides digitally programmable longhaul and shorthaul pulse templates and line build out.

- Meets or exceeds T1/J1 and E1 shorthaul and longhaul network access specifications including ANSI T1.102, T1.403, T1.408, AT&T TR 62411, ITU-T G.703, G.704 as well as ETSI 300-011, CTR-4, CTR-12 and CTR-13.

- Provides an 8-bit microprocessor bus interface or SPI compatible hardware only interface for configuration, control, and status monitoring.

- Provides transmit and receive jitter attenuation.

- Provides eight full-featured HDLC controllers, each with 128-byte transmit and receive FIFO buffers.

- Provides a two-frame payload slip buffer to allow independent backplane and line timing.

- Automatically generates and transmits DS-1 performance report messages to ANSI T1.231 and ANSI T1.408 specifications.

- Provides PRBS generators and detectors on each tributary for error testing at DS1, E1 and N x 64 Kbit/s rates as recommended in ITU-T 0.151 and 0.152.

- Provides encoding and decoding of B8ZS, HDB3 and AMI line codes.

- Provides receive equalization, clock recovery and line performance monitoring.

- Uses line rate system clock.

- Provides an IEEE P1149.1 (JTAG) compliant test access port (TAP) and controller for boundary scan test.

- Implemented in a low power 1.8/3.3 V CMOS technology.

- Provides a -40 ℃ to +85 ℃ industrial temperature operating range.

BLOCK

PMC-SIERRA

RECEIVER

- Typical signal recovery of up to -43 dB at 1024 kHz (E1) and up to -44 dB at 772 kHz (T1/J1).

- Guaranteed minimum signal recovery of -36 dB at 1024 kHz (E1) and -36 dB at 772 kHz (T1/J1) using PIC-22 gauge cable emulation.

- Frames to DSX/DS-1 signals in SF, and ESF formats.

- Frames to ITU-T G.704 basic and CRC-4 multiframe formatted E1 signals. The framing procedures are consistent with ITU-T G.706 specifications.

- Frames to TTC JT-G704 multiframe formatted J1 signals. Supports the alternate CRC-6 calculation for Japanese applications. Frames in the presence of and detects the Japanese yellow alarm.

- Tolerates more than 0.4 UI peak-to-peak, high frequency jitter as required by AT&T TR 62411 and Bellcore TR-TSY-000170.

- Provides programmable in-band loopback activate and deactivate code detection.

- Programmable internal termination.

- Provides diagnostic, line and per-DS0 payload loopbacks.

- Extracts up to three HDLC links to an H-MVIP Bus to support the D-channel, for ISDN Primary Rate Interfaces, and the C-channels, for V5.1/V5.2 interfaces. Detects the V5.2 link identification signal.
TRANSMITTER

- Generates DSX-1 shorthaul and DS-1 longhaul pulses with programmable pulse shape compatible with AT&T, ANSI and ITU requirements.

- Generates E1 pulses compliant to G.703 recommendations.

- Supports line side protection or redundancy applications.

- Provides a digital phase locked loop for generation of a low jitter transmit clock complying with all jitter attenuation, jitter transfer and residual jitter specifications of AT&T TR 62411 and ETSI CTR 12 and CTR 13.

- Provides a FIFO buffer for jitter attenuation and rate conversion in the transmit path.

- Supports unframed mode and framing bit, CRC, or data link by-pass.

- Allows insertion of framed or unframed in-band loopback code sequences.

- Allows insertion of a data link in ESF mode. Optionally inserts a datalink in the E1 national use bits.

- Inserts, from an H-MVIP bus, up to three HDLC links to support the D-channel, for ISDN Primary Rate Interfaces, and the C-channels, for V5.1/V5.2 interfaces.

- Transmits TTC JT-G704 multiframe formatted J1 signals. Supports the alternate ESF CRC-6 calculation for Japanese applications.

- Supports transmission of the alarm indication signal (AIS) and the yellow alarm signal. Supports Japanese yellow alarm generation.
- Provides ESF bit-oriented code generation.

APPLICATIONS

- Wireless Base Transceiver Station and Digital Loop Carrier (DLCs).
- Enterprise Router.
- DSLAM.
- APON Optical Network Unit (ONU).
- Integrated Access Device (IAD).
- Voice Gateway.
- Channel and Data Service Units (CSU/DSU).
- Digital Private Branch Exchanges (PBX).
- Test Equipment.
