

6.5 kW, Unidirectional and Bidirectional TVS Protection Device

MPLAD6.5KP10A(e3) – MPLAD6.5KP48CA(e3)

Product Overview

These 6.5 kW rated transient voltage suppressors (TVS) in a surface mount PLAD package are provided with design features to minimize thermal resistance and cumulative heating. These devices have the ability to clamp dangerous high voltage, short term transients such as those produced by electrostatic discharge, radiated RFI, inductive load dumps, and the secondary effects of lightning strikes before they reach sensitive component regions of a circuit. Typical applications include lightning and automotive load dump protection. They are particularly effective at meeting the multi-stroke lightning standard RTCA DO-160, section 22 for aircraft design. The all-metal bottom of this space-efficient, low-profile package provides a very low thermal impedance path for heat to escape to the mounting substrate, keeping the junction temperature low. The PLAD6.5KP is offered with stand-off voltages (V_{WM}) from 10 to 48 volts in either unidirectional or bidirectional versions. High-reliability screening is available in reference to MIL-PRF-19500, and the product is tested in accordance with the requirements of AEC-Q101. For more information on PLAD packaged products and our broad range of TVS solutions, please see our website.
