a new idea just a click away

A compact starter kit with your favorite microcontroller and a mikroBUS[™] socket.

A States Street Cicker

TO OUR VALUED CUSTOMERS

I want to express my thanks to you for being interested in our products and for having confidence in MikroElektronika.

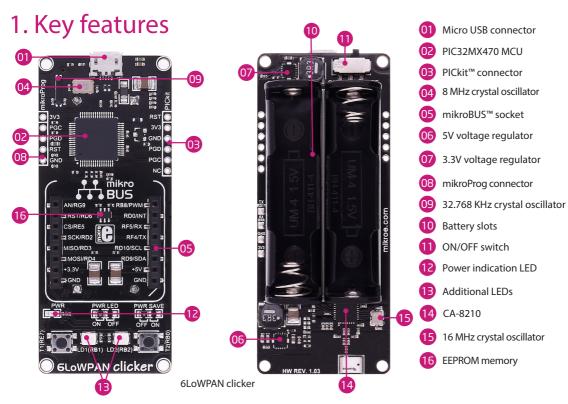

The primary aim of our company is to design and produce high quality electronic products and to constantly improve the performance thereof in order to better suit your needs.

Nebojsa Matic General Manager

2. What is 6LoWPAN clicker?

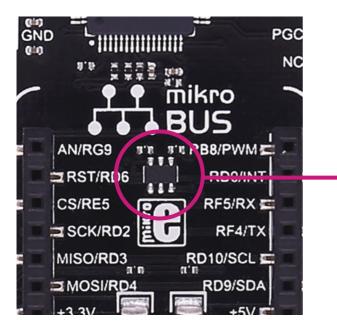

6LoWPAN clicker

6LoWPAN clicker is an amazingly compact starter development kit which brings innovative mikroBUS[™] host socket to your favorite microcontroller. It features the PIC32MX470 32-bit microcontroller,CA-8210 2.4GHz ISM band transceiver, two indication LEDs, two general purpose buttons, ON/ OFF switch, micro USB connector and a single mikroBUS[™] host socket. mikroProg connector and pads for interfacing with external electronics are provided as well. mikroBUS[™] host connector consists of two 1x8 female headers with SPI, I2C, UART, RST, PWM, Analog and Interrupt lines as well as 3.3V, 5V and GND power lines. The 6LoWPAN clicker board can be powered over two standard AAA batteries, or USB cable.

6LoWPAN clicker schematic

3. EEPROM memory

The 24AA025E64 is a a 2 Kbit Electrically Erasable PROM. The device is organized as two blocks of 128 x 8-bit memory with a 2-wire serial interface.

4. Power supply

When the board is powered up the power indication LED will be automatically turned on. The USB connection can provide up to 500mA of current which is more than enough for the operation of all on-board and additional modules.

powered with AAA batteries

6LoWPAN clicker can be powered with two standard AAA batteries. The TPS63000 Buck-Boost converter onboard the clicker regulates the power supply from the batteries.

5. PIC32MX470 microcontroller

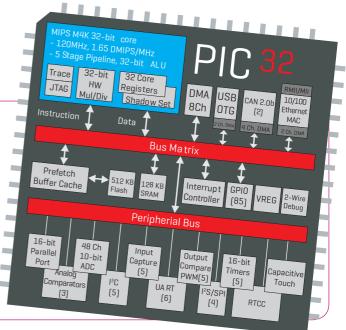

The 6LoWPAN clicker development tool comes with the PIC32MX470 microcontroller. This 32-bit MIPS M4K Core high performance microcontroller is rich with on-chip peripherals and features 512KB of Flash and 128KB RAM. It has integrated full speed USB 2.0. support.

Key microcontroller features

- MIPS32® M4K[™] Core @ 120 MHz/150 DMIPS
- 512KB of program memory
- 128KB or RAM
- USB device/host/OTG
- 10-bit, 1 Msps, 28-channel

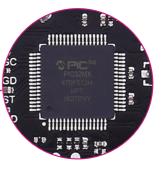

Analog-to-Digital Converter (ADC)

- Max Speed MHz: 120
- Temperature range: -40°C to 105°C

6. Programming the microcontroller

HOPALCICKE

PIC32MX470 microcontroller

The microcontroller can be programmed in two ways:

Using USB HID mikroBootloader,

Using external mikroProg[™] for PIC[°], dsPIC[°], PIC32[°] programmer.

Programming with mikroBootloader

You can program the microcontroller with bootloader which is preprogrammed by default. To transfer .hex file from a PC to MCU you need bootloader software (mikroBootloader USB HID) which can be downloaded from:

download.mikroe.com/examples/starter-boards/ clicker/6lowpan/clicker-6lowpan-bootloader.zip

After the mikroBootloader software is downloaded, unzip it to desired location and start it.

step 1 – Connecting 6LoWPAN clicker

USB HID mikroBootloader window

To start, connect the USB cable, or if already connected press the Reset button on your 6LoWPAN clicker. Click the Connect button within 5s to enter the bootloader mode, otherwise existing microcontroller program will execute.

step 2 - Browsing for .HEX file

| mikroElekt | ronika USB HIC |) Bootloader v2.7.0.0 🛛 🗕 🗖 🗙 |

mikroBootloader ready for next job

Programming with mikroProg[™] programmer

mikroProg[™] connector

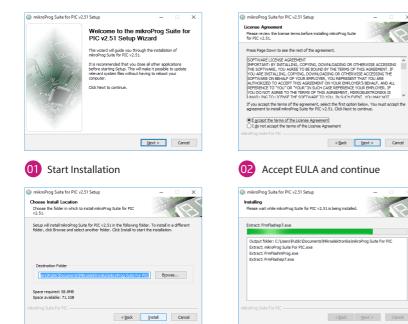

The microcontroller can be programmed with external mikroProg[™] for PIC[®], dsPIC[®] and PIC32[®] programmer and mikroProg Suite[™] for PIC[®] software. The external programmer is connected to the development system via 1x5 mikroProg[™] connector. mikroProg[™] is a fast USB 2.0 programmer with hardware debugger support. It supports PIC10[®], PIC12[®], PIC18[®], dsPIC30/33[®], PIC24[®] and PIC32[®] devices from Microchip[®]. Outstanding performance, easy operation and elegant design are its key features.

7. mikroProg Suite[™] for PIC[®] Software

The mikroProg programmer requires special programming software called mikroProg Suite for PIC®. It can be used for programming all Microchip® microcontroller families, including PIC10®, PIC12°, PIC16°, PIC18°, dsPIC30/33°, PIC24[®] and PIC32[®]. The software has intuitive interface and SingleClick™ programming technology. Just download the latest version of mikroProg Suite™ and your programmer is ready to program new devices. mikroProg Suite is updated regularly, at least four times a year, so your programmer will be more and more powerful with each new release.

8. click boards are plug and play!

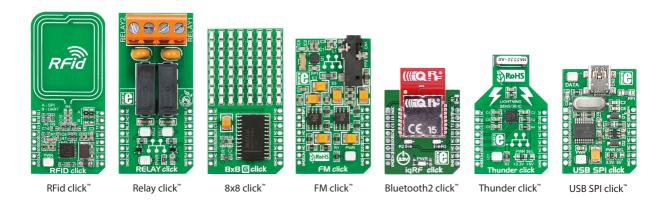

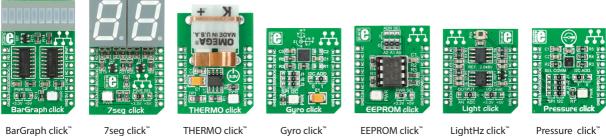

released more than 300 mikroBUS[™] compatible click[™] boards. On the average, we make one click per day. It is our intention to provide you with as many add-on boards as possible, so you will be able to expand your development board with additional functionality. Each board comes with a set of working example codes. Please visit the click[™] boards webpage for the complete list of currently available boards:
