DC Motor 23 Click

PID: MIKROE-5476

DC Motor 23 Click is a compact add-on board with a brushed DC motor driver. This board features the <u>TB67H480FNG</u>, a dual-channel, H-bridge, brushed DC motor driver from <u>Toshiba</u> <u>Semiconductor</u>. Fabricated with the BiCD process (DMOSFET is used for output power transistor), it covers a wide operating voltage range of 8.2V to 44V with a maximum output current capacity of 2A. It also offers many helpful features that support a robust and reliable operation, like the decay modes selection function, several protection features, and one anomaly detection indicator. This Click board[™] makes the perfect solution for driving two brushed or one stepping motors in various applications such as consumer electronics and industrial equipment.

DC Motor 23 Click is supported by a <u>mikroSDK</u> compliant library, which includes functions that simplify software development. This <u>Click board</u> comes as a fully tested product, ready to be used on a system equipped with the <u>mikroBUS</u> socket.

How does it work?

DC Motor 23 Click is based on the TB67H480FNG, a dual-channel, H-bridge, brushed DC motor driver from Toshiba Semiconductor. The TB67H480FNG has a current limit function that monitors the current flowing in the motor. When the motor current reaches the set current value, determined using onboard VREF trimmers (VREFA and VREFB), it shifts to Decay mode, selectable by positioning the SMD jumper labeled as DECAY to an appropriate position marked as 0 and 1, for a fixed OFF time and attenuates the current. The TB67H480FNG has a built-in regulator that allows the motor to be driven by a single power supply, provides a motor output voltage rating of around 40V, and has integrated protection mechanisms such as over-current, over-temperature, and under-voltage lockout for error detection.

Mikroe produces entire development toolchains for all major microcontroller architectures. Committed to excellency, we are dedicated to helping engineers bring the project development up to speed and achieve outstanding results.

ISO 27001: 2013 certification of informational security management system. ISO 14001: 2015 certification of environmental management system. OHSAS 18001: 2008 certification of occupational health and safety management system.

MIKROELEKTRONIKA D.O.O, Batajnički drum 23, 11000 Belgrade, Serbia VAT: SR105917343 Registration No. 20490918 Phone: + 381 11 78 57 600 Fax: + 381 11 63 09 644 E-mail: office@mikroe.com www.mikroe.com

The setting current value can be adjusted with the torque function (100%, 71%, 38%, or 0%), controlled through the <u>PCA9538A</u> port expander, which establishes communication with the MCU via the I2C serial interface. When high torque is not needed, lowering the torque setting can suppress the motor current. In addition to these torque setting pins, with the help of the expander, it is also possible to control some other signals, such as the control signals for selecting the operating mode of the motor driver. These pins, in combination with ENA and ENB pins, routed to default positions of CS and PWM pins of the mikroBUS[™] socket, enable operational modes like CW, CCW, or short-brake.

The PCA9538A also allows choosing the least significant bit (LSB) of its I2C slave address by positioning SMD jumpers labeled as ADDR SEL to an appropriate position marked as 0 and 1, alongside its interrupt feature routed to the INT pin of the mikroBUS[™] socket. Besides, all circuits can be stopped using the Sleep function, routed to default positions of the AN pin of the mikroBUS[™] socket, and thus enable power saving mode, while the RST pin provides a general-purpose reset function.

The DC Motor 23 Click supports an external power supply for the TB67H480FNG, which can be connected to the input terminal labeled as VM and should be within the range of 8.2V to 44V, while the two brushed or one stepping motor coils can be connected to the terminals labeled as B+, B-, A-, and A+.

This Click board[™] can operate with either 3.3V or 5V logic voltage levels selected via the VCC SEL jumper. This way, both 3.3V and 5V capable MCUs can use the communication lines properly. However, the Click board[™] comes equipped with a library containing easy-to-use functions and an example code that can be used, as a reference, for further development.

Specifications

Туре	Brushed
Applications	Can be used for driving two brushed or one stepping motors in various applications such as consumer electronics and industrial equipment
On-board modules	TB67H480FNG - dual-channel, H-bridge, brushed DC motor driver from Toshiba Semiconductor

Mikroe produces entire development toolchains for all major microcontroller architectures.

Committed to excellency, we are dedicated to helping engineers bring the project development up to speed and achieve outstanding results.

ISO 27001: 2013 certification of informational security management system. ISO 14001: 2015 certification of environmental management system. OHSAS 18001: 2008 certification of occupational health and safety management system.

Key Features	Low power consumption, BiCD-based structure, high breakdown voltage/large current, power saving function, various protection features, selectable decay mode, error detection function, and more				
Interface	GPIO,I2C				
Feature	No ClickID				
Compatibility	mikroBUS™				
Click board size	L (57.15 x 25.4 mm)				
Input Voltage	3.3V or 5V				

Pinout diagram

This table shows how the pinout on DC Motor 23 Click corresponds to the pinout on the mikroBUS^m socket (the latter shown in the two middle columns).

Notes	Pin	● ● mikro* ● ● ● BUS			T V	Pin	Notes
Sleep Mode	SLP	1	AN	PWM	16	ENB	Motor B Channel Control
Reset	RST	2	RST	INT	15	INT	Interrupt
Motor A Channel Control	ENA	3	CS	RX	14	NC	
	NC	4	SCK	TX	13	NC	
	NC	5	MISO	SCL	12	SCL	I2C Clock
	NC	6	MOSI	SDA	11	SDA	I2C Data
Power Supply	3.3V	7	3.3V	5V	10	5V	Power Supply
Ground	GND	8	GND	GND	9	GND	Ground

Onboard settings and indicators

Label	Name	Default	Description	
LD1	PWR	-	Power LED Indicator	
JP1	VCC SEL	Left	Logic Level Voltage Selection 3V3/5V: Left position 3V3, Right position 5V	
JP2	DECAY	Left	Decay Mode Selection 1/0: Left position 1, Right position 0	
JP3-JP4	ADDR SEL	Left	I2C Address Selection 0/1: Left position 0, Right position 1	
VREFA	VREFA	-	Motor A Current Threshold Trimmer	
VREFB	VREFB	-	Motor B Current Threshold Trimmer

Software Support

We provide a library for the DC Motor 23 Click as well as a demo application (example), developed using MIKROE compilers. The demo can run on all the main MIKROE development boards.

Package can be downloaded/installed directly from NECTO Studio Package Manager (recommended), downloaded from our LibStock[™] or found on Mikroe github account.

Library Description

This library contains API for DC Motor 23 Click driver.

Key functions

- dcmotor23 set clockwise DC Motor 23 set clockwise function.
- dcmotor23 set counter clockwise DC Motor 23 set counter clockwise function.
- dcmotor23 set decay DC Motor 23 set decay function.

Example Description

This example demonstrates the use of DC Motor 23 click board[™]. by driving the motors in both direction every 3 seconds.

The full application code, and ready to use projects can be installed directly from NECTO Studio Package Manager (recommended), downloaded from our LibStock[™] or found on Mikroe github <u>account</u>.

Other Mikroe Libraries used in the example:

- MikroSDK.Board
- MikroSDK.Log
- Click.DCMotor23

Additional notes and informations

Depending on the development board you are using, you may need USB UART click, USB UART 2 Click or RS232 Click to connect to your PC, for development systems with no UART to USB interface available on the board. UART terminal is available in all MIKROE compilers.

mikroSDK

This Click board[™] is supported with <u>mikroSDK</u> - MIKROE Software Development Kit. To ensure proper operation of mikroSDK compliant Click board[™] demo applications, mikroSDK should be

ISO 27001: 2013 certification of informational security management system. ISO 14001: 2015 certification of environmental management system. OHSAS 18001: 2008 certification of occupational health and safety management system.

downloaded from the <u>LibStock</u> and installed for the compiler you are using.
