

Vibro Motor 3 Click

PID: MIKROE-4356

Vibro Motor 3 Click is a compact add-on board that makes an ideal solution for adding simple haptic feedback in any design. This board features the VG0832022D, a coin-sized linear resonant actuator (LRA) that generates vibration/haptic feedback in the Z plane, perpendicular to the motor's surface from Vybronic. Driven by a flexible Haptic/Vibra driver the [DRV2605](#), the VG0832022D vibrates in the Z-axis, which is perpendicular to the face of the vibration motor. It draws only 19mA at 0.6V while producing a G force of 0.55 GRMS, making it ideal for battery-powered wearables. This Click board™ makes an excellent choice for devices with limited battery capacity and for users where crisp haptic feedback and low power consumption are required.

Vibro Motor 3 Click is supported by a [mikroSDK](#) compliant library, which includes functions that simplify software development. This [Click board™](#) comes as a fully tested product, ready to be used on a system equipped with the [mikroBUS™](#) socket.

How does it work?

Vibro Motor 3 Click is based on the VG0832022D, a coin-sized linear resonant actuator that generates vibration/haptic feedback in the Z plane, perpendicular to the motor's surface from Vybronic. The VG0832022D draws only 19mA at 0.6V while producing a G force of 0.55 GRMS and makes an excellent choice for applications requiring crisp haptic feedback and low power consumption. For haptic feedback applications, fast rise and fall times are critical for achieving the optimal user experience.

Mikroe produces entire development toolchains for all major microcontroller architectures.

Committed to excellency, we are dedicated to helping engineers bring the project development up to speed and achieve outstanding results.

ISO 27001: 2013 certification of informational security management system.
ISO 14001: 2015 certification of environmental management system.
OHSAS 18001: 2008 certification of occupational health and safety management system.

ISO 9001: 2015 certification of quality management system (QMS).

Driven by the [DRV2605](#), a flexible Haptic/Vibra driver from [Texas Instruments](#), this Click board™ is designed to provide extremely-flexible haptic control over a standard I2C 2-Wire interface with a maximum clock frequency of 400kHz. It possesses enabling function, routed on the CS pin of the mikroBUS™ socket labeled as the EN, and comes up with an extensive integrated library of over 100 licensed effects that eliminates the need to design haptics waveforms. It also contains a smart-loop architecture, which allows effortless auto resonant drive for LRA motor drive. This feedback provides automatic overdrive and braking, which creates a simplified input waveform paradigm as well as reliable motor control and consistent motor performance.

Additionally, the DRV2605 can also operate in the PWM Mode and accept the PWM signal from the PWM pin of the mikroBUS™ socket. In this mode, the DRV2605 device drives the actuator continuously until the user sets the DRV2605 to a Standby Mode or enters another interface mode. In PWM Mode, the strength of vibration is controlled by the duty cycle, and for the LRA motor, the DRV2605 automatically tracks the resonance frequency unless the LRA_OPEN_LOOP bit in register 0x1D is set. If the LRA_OPEN_LOOP bit is set, then the LRA motor is driven according to the frequency of the PWM input signal. More information about the operating modes of the DRV2605 can be found in the attached datasheet.

This Click board™ is designed to operate with both 3.3V and 5V logic voltage levels selected via the VCC SEL jumper. It allows for both 3.3V and 5V capable MCUs to use the I2C communication lines properly. However, the Click board™ comes equipped with a library that contains easy to use functions and an example code which can be used, as a reference, for further development.

Specifications

Type	Haptic
Applications	Can be used for applications with limited battery capacity and for users where crisp haptic feedback and low power consumption are required.
On-board modules	VG0832022D - coin-sized linear resonant actuator from Vytronics
Key Features	Low power consumption, vibration force in Z-axis, high reliability, excellent choice for

Software Support

We provide a library for the Vibro Motor 3 Click on our [LibStock](#) page, as well as a demo application (example), developed using MikroElektronika [compilers](#). The demo can run on all the main MikroElektronika [development boards](#).

Mikroe produces entire development toolchains for all major microcontroller architectures.

Committed to excellency, we are dedicated to helping engineers bring the project development up to speed and achieve outstanding results.

ISO 27001: 2013 certification of informational security management system.
ISO 14001: 2015 certification of environmental management system.
OHSAS 18001: 2008 certification of occupational health and safety management system.

ISO 9001: 2015 certification of quality management system (QMS).

Library Description

The library covers all the necessary functions to control Vibro Motor 3 Click board™. Library holds the drivers for writing and reading, for enable/disable the device, trigger the device, sets desired mode function, resets all register, for getting status, start or stop the motor, etc.

Key functions:

- void vibromotor3_set_mode (uint8_t mode_sel); - Function is used to apply the desired mode.
- void vibromotor3_start_motor (uint8_t state); - The function is used to start or stop the motor.
- void vibromotor3_set_lra_mode (uint8_t state); - The function is used to sets the device in LRA mode.

Examples description

The application is composed of three sections :

- System Initialization - Initializes I2C, GPIO and LOG structures, and sets CS and PWM pins as output ,and start to write log.
- Application Initialization - Initializes I2C driver, PWM driver and configures Vibro Motor 3 Click board™.
- Application Task - This example shows the capabilities of the Vibro Motor 3 Click board™ by changing duty cycle applied in order to get different vibrations.

The full application code, and ready to use projects can be found on our [LibStock](#) page.

Other mikroE Libraries used in the example:

- I2C
- UART
- PWM
- Conversions

Additional notes and informations

Depending on the development board you are using, you may need [USB UART click](#), [USB UART 2 click](#) or [RS232 click](#) to connect to your PC, for development systems with no UART to USB interface available on the board. The terminal available in all MikroElektronika [compilers](#), or any other terminal application of your choice, can be used to read the message.

mikroSDK

This Click board™ is supported with [mikroSDK](#) - MikroElektronika Software Development Kit. To ensure proper operation of mikroSDK compliant Click board™ demo applications, mikroSDK should be downloaded from the [LibStock](#) and installed for the compiler you are using.

For more information about mikroSDK, visit the [official page](#).
