

# SHT1X PROTO™

## Manual

*All Mikroelektronika's development systems feature a large number of peripheral modules expanding microcontroller's range of application and making the process of program testing easier. In addition to these modules, it is also possible to use numerous additional modules linked to the development system through the I/O port connectors. Some of these additional modules can operate as stand-alone devices without being connected to the microcontroller.*

# Additional board

 **MikroElektronika**

SOFTWARE AND HARDWARE SOLUTIONS FOR EMBEDDED WORLD ...making it simple

# SHT1X PROTO

The SHT1X PROTO additional board is used measure temperature and relative humidity.

## Key features:

- Serial communication;
- Measuring humidity (0 - 100%);
- Measuring temperature (-40 to +125C°);
- Low power consumption; and
- 2.4 to 5.5V power supply voltage.

Figure 1: SHT1X PROTO additional board

## How to connect the board?

The SHT1XPROTO additional board is connected to a microcontroller or some other device via pads CN1. Communication is performed via serial communication. Only two communication lines are used for this purpose: SDA - serial data transfer and SCL - serial clock.
