

DESCRIPTION

The EV1740EC-00A is the evaluation board for the MP1740, a low-power mono BTL class-D audio amplifier. It is one of MPS's products in a very small WLCSP package, high efficiency, and full bridge output structure capable of delivering 3W into 4Ω speaker.

The gain of this module is set at 2V/V, and can be easily programmed by changing the input resistors.

ELECTRICAL SPECIFICATIONS

Parameter	Symbol	Value	Units
Supply Voltage	VIN	2.5 – 5.5	V

FEATURES

- 3W Into 4Ω with 5 V VIN @ 10% THD+N
- Up to 90% Efficiency
- 2.5V~5.5V Operation from a Single Supply
- Module gain is set at 2V/V
- THD+N = 0.1% @ 1.8W, 5V, 4Ω
- Internal 250kHz Switching frequency
- Low Noise (53μV Typical) with 5V VCC
- 2mA Quiescent Current and 0.5μA Shutdown Current
- Internal thermal and short-circuit protection
- Internal depop circuitry

APPLICATIONS

- Wireless or Cellular Handsets
- PDAs
- Portable Audio

EV1740EC-00A EVALUATION BOARD

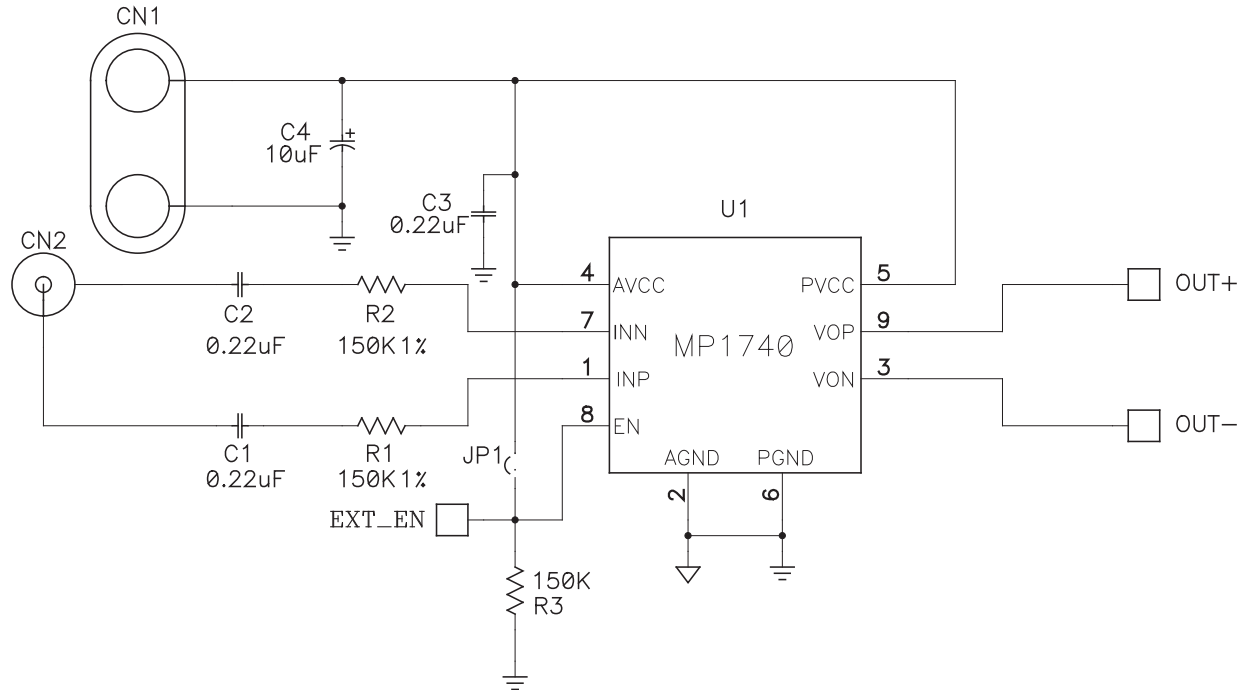

(L x W x H) 1.86" x 1.86" x 0.78"
(4.72cm x 4.72cm x 2.0cm)

Board Number	IC Number
EV1740EC-00A	MP1740

THD+N vs. P_{OUT}
fs=1kHz, V_{CC}=5V, Gain=2V/V
No Weighting

1	U1		Amplifier	WLCSP	MPS	MP1740EC

Note:

1). These external components are used for performance test. For audio performance test, a LC low-pass filter is required even if the analyzer has a low-pass filter. They are not needed for actual application..

QUICK START GUIDE

This board is set up from the factory for MP1740EC evaluation, which is a mono BTL low-power class-D audio amplifier (see Figure 5).

For audio performance test, the LC low-pass filter is required even if the analyzer has a low-pass filter. So please use TP1 and TP2 for output terminals (see Figure 6).

For more information, consult the MP1740 datasheet.

Figure 5. Connection for Mono BTL output (Top viewer)

Figure 6. Connection for Audio Performance Test measure (Bottom viewer)

1. Setup Condition for 5V Operation

- a Ensure that all external power sources are set to off.
- b Adjust the power supply to 5V (do not turn on).
- c Connect the power supply to the VCC terminals.
- d Ensure that the audio input signal source level is set to minimum.
- e Connect the audio input signal source to the amplifier inputs.

- f Connect the outputs to the external speakers.
- g Ensure that the jumper JP1 is installed for active mode, or leave JP1 open and drive EN pin with the external TTL level logic.
- h Verify that no shunt is across jumper JP2 for differential input mode, it's installed only for single-ended input.

2. Power on

- a Verify correct voltage and input polarity and set the external power supply to on
- b Adjust the input signal source level as needed. Then audio should be heard from the speaker.
