

The Future of Analog IC Technology®

EV20046DN-00A

Fast Transient Response, 2A Linear Regulator EV Board

DESCRIPTION

The EV20046DN-00A evaluation board demonstrates the performance of MP20046, a low noise, low dropout and high PSRR linear regulator. It operates from a 2.7V to 5.5V input voltage and the output voltage is preset internally which ranges from 1.5V to 3.3V.

The EV20046DN-00A can supply up to 2A of load current, and features current limiting, over temperature protection and power-good status.

An internal PMOS pass element is used to allow a low 75µA ground current at full load, and drops down to 1µA when the device is disabled, making the MP20046 suitable for battery-power devices.

FEATURES

- Up to 2A Output Current
- Low 300mV Dropout at 2A
- Fast Transient Response
- 70dB PSRR at 100Hz
- 17µV_{RMS} Low Noise Output
- Open Drain Power-Good Status Output
- Current Limit and Thermal Protection

APPLICATIONS

- Telecom
- Servers
- DSP, FPGA Supplies

MPS® and "The Future of Analog IC Technology" are Registered Trademarks of Monolithic Power Systems, Inc.

ELECTRICAL SPECIFICATIONS

Parameter	Symbol	Value	Units
Input Voltage	V _{IN}	2.7 – 5.5	V
Output Voltage	V _{OUT}	1.5	V
Load Current	I _{OUT}	2	A

QUICK START GUIDE

The output voltage of this board is set to 1.5V by operating from +2.7V to +5.5V input. The board layout accommodates most commonly used resistors and capacitors.

1. The /EN pin is connected to GND for automatic startup. You can connect /EN to VIN to disable the MP20046. Do not float the /EN pin.
2. Attach the positive and negative ends of the load to the VOUT and GND pins, respectively.
3. Attach the input voltage ($2.7V \leq V_{IN} \leq 5.5V$) and input ground to the VIN and GND pins, respectively.

To evaluate the other versions of MP20046DN with different output voltages, carefully remove the IC (U1) and replace it with the corresponding chip. Please refer to the datasheet for the detailed information of different output voltage option of MP20046DN.
