

#### **DESCRIPTION**

The EV6500GU-00A is an evaluation board for the MP6500GU, a stepper motor driver with a built-in micro stepping translator.

It operates from a supply voltage of up to 35V and can deliver motor current up to 2.5A. It can operate a bipolar stepper motor in full- half-, quarter-, and eighth- step modes by setting the MS2, MS1. The input control signals for the MP6500GU are applied through the connector or generated on board.

### **QUICK START GUIDE**

- 1. Attach the input voltage (4.5V  $\leq$  V<sub>IN</sub>  $\leq$  35V) and input ground to the VIN and GND connectors respectively.
- 2. Switch the SW2 to the position 3(Top side) to enable external step signal input from the EXT\_STEP connector.
- 3. Attach the step signal to the EXT\_STEP connector.
- Input control and logic signal can be set either through the CN1 connector by the external MCU
  or through the SW1 by manual action. Manual action requires an external 5V Vcc voltage as a
  pull-up power supply.
