QUICK START GUIDE

- 1. Connect the positive and negative terminals of the load to the VOUT and GND pins, respectively.
- 2. Preset the power supply output between 4.5V and 36V, and then turn off the power supply.
- 3. Connect the positive and negative terminals of the power supply output to the VIN and GND pins, respectively.
- 4. Turn the power supply on. The board will automatically start up.
- 5. To get better EMI performance, add the EMI components at bottom layer of the board and connect the input power supply between VEMI and GND.
- 6. To use the SYNC function, connect an external clock with a range of 800kHz to 2MHz to synchronize the internal clock rising edge to the external clock rising edge.
