

Reference Specification

200°C Operation Leaded MLCC for Automotive with AEC-Q200 RHS Series

Product specifications in this catalog are as of Mar. 2022, and are subject to change or obsolescence without notice.

Please consult the approval sheet before ordering. Please read rating and Cautions first.

⚠ CAUTION

1. OPERATING VOLTAGE

When DC-rated capacitors are to be used in AC or ripple current circuits, be sure to maintain the Vp-p value of the applied voltage or the Vo-p which contains DC bias within the rated voltage range. When the voltage is started to apply to the circuit or it is stopped applying, the irregular voltage may be generated for a transit period because of resonance or switching. Be sure to use a capacitor within rated voltage containing these irregular voltage.

When DC-rated capacitors are to be used in input circuits from commercial power source (AC filter), be sure to use Safety Recognized Capacitors because various regulations on withstand voltage or impulse withstand established for each equipment should be taken into considerations.

Voltage	DC Voltage	DC+AC Voltage	AC Voltage	Pulse Voltage(1)	Pulse Voltage(2)
Positional Measurement	Vo-p	Vo-p	Vp-p	Vp-p	Vp-p

2. OPERATING TEMPERATURE AND SELF-GENERATED HEAT

Keep the surface temperature of a capacitor below the upper limit of its rated operating temperature range. Be sure to take into account the heat generated by the capacitor itself.

When the capacitor is used in a high-frequency current, pulse current or the like, it may have the self-generated heat due to dielectric-loss. In case of Class 2 capacitors (Temp.Char. : X7R,X7S,X8L, etc.), applied voltage should be the load such as self-generated heat is within 20 °C on the condition of atmosphere temperature 25 °C. Please contact us if self-generated heat is occurred with Class 1 capacitors (Temp.Char. : C0G,U2J,X8G, etc.). When measuring, use a thermocouple of small thermal capacity-K of Φ 0.1mm and be in the condition where capacitor is not affected by radiant heat of other components and wind of surroundings. Excessive heat may lead to deterioration of the capacitor's characteristics and reliability.

3. FAIL-SAFE

Be sure to provide an appropriate fail-safe function on your product to prevent a second damage that may be caused by the abnormal function or the failure of our product.

4. OPERATING AND STORAGE ENVIRONMENT

The insulating coating of capacitors does not form a perfect seal; therefore, do not use or store capacitors in a corrosive atmosphere, especially where chloride gas, sulfide gas, acid, alkali, salt or the like are present. And avoid exposure to moisture. Before cleaning, bonding, or molding this product, verify that these processes do not affect product quality by testing the performance of a cleaned, bonded or molded product in the intended equipment. Store the capacitors where the temperature and relative humidity do not exceed 5 to 40 °C and 20 to 70%. Use capacitors within 6 months.

5. VIBRATION AND IMPACT

Do not expose a capacitor or its leads to excessive shock or vibration during use.

6. SOLDERING

When soldering this product to a PCB/PWB, do not exceed the solder heat resistance specification of the capacitor. Subjecting this product to excessive heating could melt the internal junction solder and may result in thermal shocks that can crack the ceramic element.

7. BONDING AND RESIN MOLDING, RESIN COAT

In case of bonding, molding or coating this product, verify that these processes do not affect the quality of capacitor by testing the performance of a bonded or molded product in the intended equipment. In case of the amount of applications, dryness / hardening conditions of adhesives and molding resins containing organic solvents (ethyl acetate, methyl ethyl ketone, toluene, etc.) are unsuitable, the outer coating resin of a capacitor is damaged by the organic solvents and it may result, worst case, in a short circuit.

The variation in thickness of adhesive or molding resin may cause a outer coating resin cracking and/or ceramic element cracking of a capacitor in a temperature cycling.

8. TREATMENT AFTER BONDING AND RESIN MOLDING, RESIN COAT

When the outer coating is hot (over 100 °C) after soldering, it becomes soft and fragile. So please be careful not to give it mechanical stress.

Failure to follow the above cautions may result, worst case, in a short circuit and cause fuming or partial dispersion when the product is used.

9. LIMITATION OF APPLICATIONS

Please contact us before using our products for the applications listed below which require especially high reliability for the prevention of defects which might directly cause damage to the third party's life, body or property.

1. Aircraft equipment 2. Aerospace equipment

3. Undersea equipment 4. Power plant control equipment

5. Medical equipment
 6. Transportation equipment (vehicles, trains, ships, etc.)
 7. Traffic signal equipment
 8. Disaster prevention / crime prevention equipment

9. Data-processing equipment exerting influence on public

10. Application of similar complexity and/or reliability requirements to the applications listed in the above.

NOTICE

1. CLEANING (ULTRASONIC CLEANING)

To perform ultrasonic cleaning, observe the following conditions.

Rinse bath capacity: Output of 20 watts per liter or less.

Rinsing time: 5 min maximum.

Do not vibrate the PCB/PWB directly.

Excessive ultrasonic cleaning may lead to fatigue destruction of the lead wires.

2. SOLDERING AND MOUNTING

Insertion of the Lead Wire

- When soldering, insert the lead wire into the PCB without mechanically stressing the lead wire.
- Insert the lead wire into the PCB with a distance appropriate to the lead space.

3. CAPACITANCE CHANGE OF CAPACITORS

• Class 2 capacitors (Temp.Char. : X7R,X7S,X8L etc.)

Class 2 capacitors an aging characteristic, whereby the capacitor continually decreases its capacitance slightly if the capacitor leaves for a long time. Moreover, capacitance might change greatly depending on a surrounding temperature or an applied voltage. So, it is not likely to be able to use for the time constant circuit

Please contact us if you need a detail information.

4.WHEN USING THE FREQUENCY EXCEEDING 20kHz

In the case of use exceeding 150 °c, ESR of the capacitor increase by progress at time in the frequency exceeding 20kHz, and the self-heating of the capacitor may be higher.

The heating temperature varies depending on the capacitance value and the applied voltage.

If you are considering using more than 20kHz, please contact us in advance.

⚠ NOTE

- 1. Please make sure that your product has been evaluated in view of your specifications with our product being mounted to your product.
- 2. You are requested not to use our product deviating from this product specification.

1. Application

This specification is applied to 200°C Operation Leaded MLCC RHS series iin accordance with AEC-Q200 requirements used for Automotive Electronic equipment.

2. Rating

• Applied maximum temperature up to 200°C

Note: Maximum accumulative time to 200°C is within 2000 hours.

Part Number Configuration

RHS 472 Κ H01 ex.) Q9 2A 0 Α2 В Series Temperature Rated Capacitance Capacitance Dimension Individual Package Lead Voltage Characteristics Tolerance Specification (LxW) Style

Series

Code	Content
RHS	Epoxy coated, 200°C max.

• Temperature Characteristics

Code	Temp. Char.	Temp. Range	Cap. Change	Standard Temp.	Operating Temp. Range
Q9	X9Q	-55∼125°C	+/-15%	25°C	-55∼200°C

		Resistance	Temperature	(Whichever is smaller)	DC voltage not exceeding the rated voltage at normal temperature		
		(I.R.)			and humidity and within 2 min. of charging.		
					(Charge/Discharge current ≤ 50mA.)		
			High	0.5MΩ or 0.1MΩ • μF min. (Whichever is smaller)	The insulation resistance should be measured at 200±5 °C with a DC voltage not exceeding 25% of the rated voltage at normal		
			Temperature				
					temperature and humidity and within 2 min. of charging.		
		D: 1	D /	N. 1.6.4. 1. P.	(Charge/Discharge current ≦ 50mA.)		
		Dielectric	Between	No defects or abnormalities.	The capacitor should not be damaged when DC voltage of 250%		
		Strength	Terminals		of the rated voltage is applied between the terminations for 1 to 5		
					seconds.		
			D - du		(Charge/Discharge current ≤ 50mA.)		
			Body Insulation	No defects or abnormalities.	The capacitor is placed in a container with metal balls of 1mm diameter so that each terminal,		
					short-circuit is kept approximately 2mm from Approx		
					the balls, and 250% of the rated DC voltage is		
					impressed for 1 to 5 seconds between		
					capacitor terminals and metal balls.		
					ivie		
18	Terminal Tensile Termination not to be broken or loosened.		at to be broken or leasened	(Charge/Discharge current ≤ 50mA.) ba As in the figure, fix the capacitor body, apply the force gradually			
10	Strength		Terrimation	of to be broken or loosened.	to each lead in the radial direction of the capacitor until reaching		
	Strength Strength				10N and then keep the force applied for 10±1 seconds.		
					//4//		
					'2 		
					· /z		
		Bending	Termination not to be broken or loosened.		Each lead wire should be subjected to a force of 2.5N and then be bent 90° at the point of egress in one direction. Each wire is then returned to the original position and bent 90° in the opposite		
		Strength					
		· · · · · · · · · · · · · · · · ·					
					direction at the rate of one bend per 2 to 3 seconds.		
19	Capacitance	ı	Within the specified Tolerance.		The capacitance change should be measured after 5min. at		
	Temperature		-55 to 125°C : within ±15%		each specified temperature step.		
	Characteristics		125 to 200°C : within +15/-70%				
					Step Temperature(°C)		
					1 25±2		
					2 -55±3		
					3 25±2		
					4 200±5		
					5 25±2		
					The ranges of capacitance change compared with the above		
					25°C value over the temperature ranges shown in the table		
					should be within the specified ranges.		
					•Pretreatment		
					Perform the heat treatment at 150+0/-10°C for 60±5 min and		
					then let sit for 24±2 hours at *room condition.		
					Perform the initial measurement.		
					=======================================		

6. Packing specification

•Bulk type (Packing style code : B)

The size of packing case and packing way

The number of packing = *1 Packing quantity × *2 n

*1 : Please refer to [Part number list].

*2 : Standard n = 20 (bag)

Note)

The outer package and the number of outer packing be changed by the order getting amount.

JKBCRPE02

-Ammo pack taping type (Packing style code : A)

A crease is made every 25 pitches, and the tape with capacitors is packed zigzag into a case. When body of the capacitor is piled on other body under it.

The size of packing case and packing way

7. Taping specification

7-1. Dimension of capacitors on tape

Straight taping type < Lead Style : DG >

Pitch of component 12.7mm / Lead spacing 2.5mm

Unit: mm

Item	Code	Dimensions	Remarks	
Pitch of component	Р	12.7+/-1.0		
Pitch of sprocket hole	P0	12.7+/-0.2		
Lead spacing	F	2.5+0.4/-0.2		
Length from hole center to component center	P2	6.35+/-1.3	Deviation of progress direction	
Length from hole center to lead	P1	5.1+/-0.7		
Deviation along tape, left or right defect	ΔS	0+/-2.0	They include deviation by lead bend	
Carrier tape width	W	18.0+/-0.5		
Position of sprocket hole	W1	9.0+0/-0.5	Deviation of tape width direction	
Lead distance between reference and bottom plane	Н	20.0+/-0.5		
Protrusion length	L	0.5 max.		
Diameter of sprocket hole	ФD0	4.0+/-0.1		
Lead diameter	Фd	0.5+/-0.05		
Total tape thickness	t1	0.6+/-0.3	They include hold down tape thickness	
Total thickness of tape and lead wire	t2	1.5 max.		
Deviation across tape	Δh1	1.0 max.		
Deviation across tape	Δh2	1.0 IIIax.		
Portion to cut in case of defect	L	11.0+0/-1.0		
Hold down tape width	W0	9.5 min.		
Hold down tape position	W2	1.5+/-1.5		
Coating extension on lead	е	2.0 max.		

Inside crimp taping type < Lead Style : M2 > Pitch of component 12.7mm / Lead spacing 5.0mm

Unit : mm

Item		Dimensions	Remarks	
Pitch of component		12.7+/-1.0		
Pitch of sprocket hole		12.7+/-0.2		
Lead spacing		5.0+0.6/-0.2		
Length from hole center to component center		6.35+/-1.3	Deviation of progress direction	
Length from hole center to lead		3.85+/-0.7		
Deviation along tape, left or right defect		0+/-2.0	They include deviation by lead bend	
Carrier tape width	W	18.0+/-0.5		
Position of sprocket hole	W1	9.0+0/-0.5	Deviation of tape width direction	
Lead distance between reference and bottom plane	H0	20.0+/-0.5		
Protrusion length	l	0.5 max.		
Diameter of sprocket hole	ФD0	4.0+/-0.1		
Lead diameter	Фd	0.5+/-0.05		
Total tape thickness	t1	0.6+/-0.3	They include hold down tape thickness	
Total thickness of tape and lead wire	t2	1.5 max.		
Deviation across tape	Δh1	2.0 max. (Dimension code : W)		
Deviation across tape	Δh2	1.0 max. (except as above)		
Portion to cut in case of defect	L	11.0+0/-1.0		
Hold down tape width	W0	9.5 min.		
Hold down tape position	W2	1.5+/-1.5		
Coating extension on lead		Up to the end of crimp		

7-2. Splicing way of tape

1) Adhesive force of tape is over 3N at test condition as below.

2) Splicing of tape

- a) When base tape is spliced
 - •Base tape shall be spliced by cellophane tape. (Total tape thickness shall be less than 1.05mm.)

- b) When hold down tape is spliced
 - •Hold down tape shall be spliced with overlapping. (Total tape thickness shall be less than 1.05mm.)

- c) When both tape are spliced
 - •Base tape and hold down tape shall be spliced with splicing tape.
