Overview

ASGTX temperature compensated Crystal Oscillators are designed to accommodate a broad breadth of Precision TCXO requirements, without NRE and extended lead-times. This oscillator series is designed and manufactured by Abracon Corporation and is available to order from 1pc to high volume production quantities.

- **Quick-turn availability of a TCXO/VCTCXO with LVC MOS output, Any frequency between 10MHz and 250MHz**

For example, if a reference oscillator requirement calls out 49.7521MHz; ± 1.00 ppm TCXO/VCTCXO with **LVC MOS** output, ASGTX can be configured and shipped within days. Customers with low-to-mid annual volume requirements find it difficult to procure custom frequency TCXO/VCTCXO's without costly NRE charges and/or long lead-times (≥ 12 weeks).

- **Quick turn availability of a TCXO/VCTCXO requiring LVDS or LVPECL Differential output, Any frequency between 10MHz to 1.50GHz**

ASGTX is available with either **LVDS or LVPECL** output, from **10MHz to 1.50GHz**; at any desired frequency, such as 149.875MHz, 1.00GHz, 1.5GHz, etc. with as tight as ± 1.00 ppm stability over temperature. No other solution in the marketplace currently offers such capability, especially in a small form-factor of 9.0x7.0x2.24 mm.

ASGTX is suitable for a wide variety of precision timing applications where TCXO/VCTCXO's are typically employed. In addition, for high frequency LO requirements, traditionally customers have relied on SAW based oscillators. Such devices are only available at a few fixed frequencies, such as 915MHz, 1.0GHz, etc. They are typically in 9x14mm or bigger packages and vary as much as ± 100 ppm over temperature.

Although ASGTX series will be slightly less favorable in phase noise performance compared to SAW based oscillators, it offers the following key advantages:

- One device can be used for both TCXO or VCTCXO configurations
- ± 1.00 ppm stability over -30°C to $+70^{\circ}\text{C}$ and ± 2.00 ppm stability over -40°C to $+85^{\circ}\text{C}$
- Any carrier frequency between 10MHz and 1.50GHz
- LVC MOS / LVDS / LVPECL Output
- Small form-factor of 9.0x7.0x2.24 mm
- No NRE, reduced lead-time

Features

- 10MHz to 1.50GHz, any Carrier Frequency in differential mode (LVDS or LVPECL)
- 10MHz to 250MHz, any Carrier Frequency in LVC MOS mode
- -40°C to +85°C operating temperature range
- ± 1.0 ppm stability over -30°C to +70°C and ± 2.0 ppm stability over -40°C to +85°C
- Minimum guaranteed pull ability of ± 10 ppm minimum (VCTCXO)
- Good Phase Noise, excellent Harmonics and Spurious content
- Immediate availability, quick-turn lead-time for small quantities

Applications

- 40G and 100G Ethernet
- WiMax,
- LTE, BTS
- CATV, LAN, LMDS
- Point-to-Point communication network
