

Sealed Ultra Subminiature Basic Switch

D2EW

Supports multi-angle operation without using a lever, increased flexibility in customer unit design

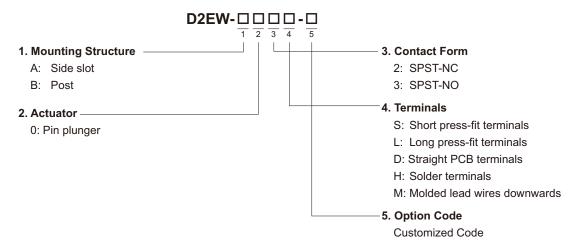

- The industry's smallest class *(8.3 x 7.0 x 5.3 mm) D2GW equivalent size
- · A left-right asymmetrical post shape prevents misassembly
- A sliding contact structure delivers quiet operation
- Contributes to energy saving (Minimum applicable load 50 μ A)
- * Based on OMRON investigation in May 2024

Model Number Legend

Some model number elements cannot be used in conjunction.

If you have any desired model with a specification not in this model number legend, contact your OMRON sales representative. We will consider if a requested model can be manufactured by modifying existing models.

List of Models

		Model	Side Slot	Post
Actuator	Terminals	Contact Form		
Pin plunger	Short press-fit terminals	SPST-NC	D2EW-A02S	_
		SPST-NO	D2EW-A03S	_
	Long press-fit terminals	SPST-NC		D2EW-B02L
		SPST-NO		D2EW-B03L
	Otracials DOD to make all	SPST-NC	D2EW-A02D	D2EW-B02D
	Straight PCB terminals	SPST-NO	D2EW-A03D	D2EW-B03D
	Solder terminals	SPST-NC	D2EW-A02H	D2EW-B02H
		SPST-NO	D2EW-A03H	D2EW-B03H
	Molded lead wires downwards	SPST-NC		D2EW-B02M
		SPST-NO	-	D2EW-B03M

If you have any desired model with a specification not in the above list, contact your OMRON sales representative. We will consider if a requested model can be manufactured by modifying existing models.

Contact Specifications

Contact	Specification	Slide
Contact	Material	Gold plated
Minimum applicable load	5 VDC 50 μA	

Note: For more information on the minimum applicable load, refer to Using Micro Loads of Precautions.

Ratings

Rating voltage	Resistive load
12 VDC	100 mA
18 VDC	20 mA

Note: The rating values apply under the following test conditions.

- 1. Ambient temperature: $20 \pm 2^{\circ}C$
- 2. Ambient humidity: 65 \pm 5%
- 3. Operating frequency: 30 operations/min

Characteristics

Items			
Operating speed		30 mm to 500 mm/s (pin plunger models)	
Operating frequency	Mechanical	30 operations/min Max.	
	Electrical	30 operations/min Max.	
Insulation resistance		100 MΩ Min. (at 500 VDC)	
Contact resistance	Terminals	500 mΩ Max.	
(initial value)	Molded lead wires	500 mΩ Max.	
Dielectric strength	Between same polarity	500 VAC 50/60 Hz 1 min	
	Between current carrying metal parts and ground	1,500 VAC 50/60 Hz 1 min	
Vibration resistance *1	Malfunction	10 to 55 Hz, 1.5 mm double amplitude	
Shock resistance	Destruction	1,000 m/s ² Max.	
Shock resistance	Malfunction *1	300 m/s ² Max.	
D	Mechanical	300,000 operations Min. (at 30 operations/min)	
Durability *2	Electrical	300,000 operations Min. (at 30 operations/min)	
Degree of protection	Terminals	IEC IP67 (excluding the terminals)	
Degree of protection	Molded lead wires	IEC IP67	
Ambient operatingtamper	rature	-40 to +85°C (at 60% RH Max.)(with no icing or condesenation)	
Ambient operation humid	lity	95%RH Max. (for +5 to +35°C)	
Heart resistance		85°C 500 hours	
Cold resistance		-40°C 500 hours	
Humidity resistance		85°C 85% RH 500 hours	
Temperature cycle resistance		-40°C (0.5hours) ⇔ 85°C (0.5 hours) 500 cycles	
Weight		Approx. 0.5 g (for pin plunger models with terminals)	
		, , , , , , ,	

Note: The data given above are initial values

^{*1.} For the pin plunger models, the above values apply for use at the free position, and total travel position. Close or open circuit of the contact is 1 ms Max.

^{*2.} For testing conditions, consult your OMRON sales representative.

Precautions

Please refer to "Safety Precautions for All Detection Switches" for correct use.

Cautions

Degree of Protection

• Do not use this product underwater.

Satisfy the test conditions for the standard given below, this test is to check the ingress of water into the switch enclosure after submerging the Switch in water for a given time. Satisfying this test condition does not mean that the Switch can be used underwater.

JIS C0920:

Degrees of protection provided by enclosures of electrical apparatus (IP Code)

IEC 60529:

Degrees of protection provided by enclosures (IP Code) Degree of protection: IP67

(check water intrusion after immersion for 30 min. submerged 1m underwater)

- Do not operate the Switch when it is exposed to water spray, or when water drops adhere to the Switch surface, or during sudden temperature changes, otherwise water may intrude into the interior of the Switch due to a suction effect.
- Prevent the Switch from coming into contact with oil and chemicals.

Otherwise, damage to or deterioration of Switch materials may result.

 Do not use the Switch in areas where it is exposed to silicon adhesives, oil, or grease. Otherwise faulty contact may result due to the generation of silicon oxide.

Soldering

When soldering the lead wire to the terminal, first insert the lead wire conductor through the terminal hole and then conduct soldering.

Make sure that the temperature of the soldering iron tip does not exceed 300°C, and complete the soldering within 3 seconds. Do not apply any external force for 1 minute after soldering. Soldering at an excessively high temperature or soldering for more than 3 seconds may deteriorate the characteristics of the Switch.

In case of automatic soldering, please do not apply the heat beyond 260°C within 5 seconds. Pay careful attention so that flux or solder liquid does not flow over the edge of the PCB panel.

Horizontal and rotational operations

 Factors such as the operating speed, operating frequency, push-button indentation, and material and shape will affect the durability of the Switch. Confirm performance specifications under actual operating conditions before using the Switch in applications.

Correct Use

Mounting

- Turn OFF the power supply before mounting or removing the Switch, wiring, or performing maintenance or inspection.
 Failure to do so may result in electric shock or burning.
- For models with posts, secure the posts by pressing into an attached device. Provide guides on the opposite ends of the posts to ensure that they do not fall out or rattle.

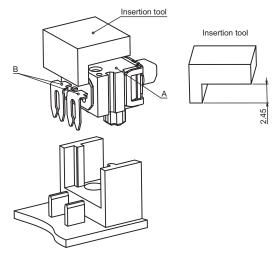

When mounting a Press-fit terminals, press in A (body) and B (terminal) in the drawing below at the same time.

If A (body) and the Press fit terminals will be

If A (body) only is pressed in, the Press-fit terminals will be deformed and will not be properly inserted.

Also, ensure that the Press-fit terminals is facing down when it is inserted. Mold the terminal part with urethane resin, etc., and use it in a state where the terminal part does not come into contact with outside air.

Avoid connecting soldered or laser-welded terminals. Avoid mounting in conditions exposed to corrosive gases, high temperature and humidity, and dust.

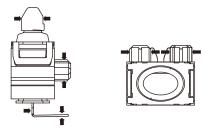

Operating Body

 Use an operating body with low frictional resistance and of a shape that will not interfere with the sealing rubber, otherwise the plunger may be damaged or the sealing may deteriorate.

Handling

- Do not handle the Switch in a way that may cause damage to the sealing rubber.
- When handling the Switch, ensure that pressure is not applied to the Pin plunger, Posts and Terminal in the directions shown in the following diagram. Otherwise, Switch may be damaged, or be reduced performance.

Wiring Molded Lead Wire Models

When wiring molded lead wire models, ensure that there is no
weight applied on the wire or that there are no sharp bends
near the parts where the wire is drawn out. Otherwise,
damage to the Switch or deterioration in the sealing may
result.

Using Micro Loads

 Even when using micro load models within the specification range, if inrush/surge current occurs, it may increase the contact wear and so decrease durability. Therefore, insert a contact protection circuit where necessary.
