# **CJ-series Output Units**

# CJ1W-OC/OA/OD

CSM\_CJ1W-OUTPUT\_DS\_E\_8\_5

# A Wide Range of Basic Output Units for High Speed Output and Different Applications

- These Output Units receive the results of output instructions from the CPU Unit and perform ON/OFF control for external devices.
- High-speed Output models CJ1W-OD213 and CJ1W-OD234 can help to increase system throughput.

CJ1W-OD213

CJ1W-OD234

#### **Features**

- High-speed output models are available, meeting versatile applications. ON Response Time: 15 $\mu$ s, OFF Response Time: 80 $\mu$ s
- · Output Units are available with any of three output types: relay contact outputs, triac outputs, or transistor outputs.
- For transistor outputs, select from sinking outputs or sourcing outputs.
- Output Units with load short-circuit protection are also available. \*1
- Select the best interface for each application: Fujitsu connectors or MIL connectors. \*2
- A wide variety of Connector-Terminal Block Conversion Units are available to allow you to easily wire external output devices.
- \*1. The following Units have load short-circuit protection: CJ1W-OC202, CJ1W-OD204, CJ1W-OD212, and CJ1W-OD232.
- \*2. Available for models with 32 outputs or 64 outputs

# **Ordering Information**

#### **International Standards**

- The standards are abbreviated as follows: U: UL, U1: UL (Class I Division 2 Products for Hazardous Locations), C: CSA, UC: cULus, UC1: cULus (Class I Division 2 Products for Hazardous Locations), CU: cUL, N: NK, L: Lloyd, and CE: EC Directives.
- Contact your OMRON representative for further details and applicable conditions for these standards.

#### **Accessories**

Connectors are not included for models with connectors. Either use one of the applicable connector listed below or use an applicable Connector-Terminal Block Conversion Unit or I/O Relay Terminal. For details on wiring methods, refer to *External Interface*.

#### **Applicable Connectors**

#### Fujitsu Connectors for 32-input, 32-output, 64-input, 64-output, 32-input/32-output, and 16-input/16-output Units

<sup>\*1.</sup> G70A is a I/O terminal socket product. Relay is not provided with the socket. Be sure to order a relay, timer separately.

<sup>\*2.</sup> Each relay to be mounted must incorporate a coil that has proper specifications within the maximum rated voltage range.
\*3. Eight or fewer points ON: 5 A, Nine or more points ON: 3 A.

<sup>\*4.</sup> Internal common at terminal block: No internal connections

<sup>\*5.</sup> Internal common at terminal block: Internal IO common 16 points internally connected

<sup>\*6.</sup> Internal common at terminal block: Every 4 points internally connected at terminal block middle row.

Note: 1. For the combination of Input Units with I/O Relay Terminal and Connecting Cables, refer to 3. Connecting I/O Relay Terminals.

2. Please refer to each Datasheet about details.

<sup>3.</sup> When the G7TC is used with an AC rated voltage, three rated currents can be used. If a coil voltage of 110 or 220 VAC is used, 50 Hz cannot be used.

# **Specifications**

### CJ1W-OC201 Contact Output Unit (Independent Relays, 8 Points)

<sup>\*</sup> Terminal numbers A0 to A8 and B0 to B8 are used in the external connection and terminal-device variable diagrams. They are not printed on the Units

Note: Although 16 I/O bits (1 word) are allocated, only 8 of these can be used for external I/O.

# CJ1W-OC211 Contact Output Unit (16 Points)

2 A 250 VAC, 2 A 24 VDC max.

# Circuit Configuration

The signal names of the terminals are the device variable names.
 The device variable names are the names that use "Jxx" as the device name.

# External connection and terminal-device variable diagram

- When wiring, pay careful attention to the polarity of the external power supply. The load may operate incorrectly if the polarity is reversed.
- The signal names of the terminals are the device variable names.

  The device variable names are the names that use "Jxx" as the device name.

Note: Although 16 I/O bits (1 word) are allocated, only 8 of these can be used for external I/O.

<sup>\*</sup> Terminal numbers A0 to A8 and B0 to B8 are used in the external connection and terminal-device variable diagrams. They are not printed on the Units.

# CJ1W-OD211 Transistor Output Unit (16 Points)

| Name                            | 16-point Transistor Output Unit with Terminal Block (Sinking Outputs)                                        |
|---------------------------------|--------------------------------------------------------------------------------------------------------------|

The signal names of the terminals are the device variable names.
The device variable names are the names that use "Jxx" as the device name.

- When wiring, pay careful attention to the polarity of the external power supply. The load may operate incorrectly if the polarity is reversed.
  Be sure to wire both terminals A9 and A19 (COM0).
  Be sure to wire both terminals B9 and B19 (COM1).
  Be sure to wire both terminals A10 and A20 (+V).
  Be sure to wire both terminals B10 and B20 (+V).
  The signal pages of the terminals are the device variable pages.

- The signal names of the terminals are the device variable names.

The device variable names are the names that use "Jxx" as the device name

| External Power Supply            | 20.4 to 26.4 VDC, 40 mA min.                                                                                 |
| Weight                           | 120 g max.                                                                                                   |
|                                  | Circulature                                                                                                  |

# Circuit Configuration

- When overcurrent is detected, the ERR indicator will light, and the corresponding bit in the Basic I/O Unit Information Area (A050 to A069) will change to TRUE.
- The signal names of the terminals are the device variable names.
   The device variable names are the names that use "Jxx" as the device name.

External connection and terminal-device variable diagram

- When wiring, pay careful attention to the polarity of the external power supply. The load may operate incorrectly if the polarity is reversed.
- The signal names of the terminals are the device variable names.

  The device variable names are the names that use "Jxx" as the device name.

Note: Although 16 I/O bits (1 word) are allocated, only 8 of these can be used for external I/O.

<sup>\*</sup> Terminal numbers A0 to A8 and B0 to B8 are used in the external connection and terminal-device variable diagrams. They are not printed on the Units.

# CJ1W-OD212 Transistor Output Unit (16 Points)

| Name                            | 16-point Transistor Output Unit with Terminal Block (Sourcing Outputs)                                       |

#### **External Interface**

# 8-point/16-point Units (18-point Terminal Blocks)

Note: The CJ1W-OD202, CJ1W-OD204, and CJ1W-OD212 also have an ERR indicator for the load short-circuit alarm.

# 32-point Units (Models with 40-point Fujitsu Connector or MIL Connector)

Note: Only the CJ1W-OD232 has an ERR indicator for the load short-circuit alarm.

# 64-point Units (Models with Two 40-point Fujitsu Connectors or MIL Connector)

# Wiring Basic I/O Units with Terminal Blocks

#### **Electric Wires**

The following wire gauges are recommended.

| Terminal Block Connector | Wire Size                                    |
|--------------------------|----------------------------------------------|
| 18-terminal              | AWG 22 to 18 (0.32 to 0.82 mm <sup>2</sup> ) |

#### **Crimp terminals**

Use crimp terminals (M3) having the dimensions shown below.

#### I/O Unit Wiring Methods

An I/O Unit can be connected to an external device by any of the following three methods.

#### 1. User-provided Cable

An I/O Unit can be directly connected to an external device by using a connector.

| Α | User-provided cable |
|---|---------------------|
| В | External device     |
| С | Connector           |

#### 2. Connector-Terminal Block Conversion Unit

Use a Connecting Cable to connect to a Connector-Terminal Block Conversion Unit.

Converting the I/O Unit connector to a screw terminal block or push-in terminal block makes it easy to connect external devices.

| A | Connecting Cable for Connector-Terminal Block Conversion Unit XW2Z |
|---|--------------------------------------------------------------------|
| В | Connector-Terminal Block Conversion Unit<br>XW2R                   |
| С | Conversion to a screw terminal block                               |

#### 3. I/O Relay Terminal

Use a Connecting Cable to connect to an I/O Relay Terminal.

The I/O specifications can be converted to relay outputs and AC inputs by connecting the I/O Relay Terminal to an I/O Unit.

| Α | Connecting Cable for I/O Relay Terminals XW2Z-R                                                                                                     |
|---|-----------------------------------------------------------------------------------------------------------------------------------------------------|

| Connection      | Pins | OMRON set                                                                                                          | DDK parts      |  |  |
|-----------------|------|--------------------------------------------------------------------------------------------------------------------|----------------|--|--|
| Pressure-welded | 40   | XG4M-4030-T *1                                                                                                     | FRC5-A040-3T0S |  |  |
|                 | 40   | XG5N-401 *2                                                                                                        | HU-40OS2-001   |  |  |
| Crimped         | -    | Crimp Contacts for XG5N *3<br>XG5W-0232 (loose contacts: 100 pieces)<br>XG5W-0232-R (reel contacts: 10,000 pieces) | HU-111S        |  |  |

<sup>\*1.</sup> Socket and Stain Relief set.

#### Wire Size

We recommend using cable with wire gauges of AWG 28 to 24 (0.08 to 0.2 mm²). Use cable with external wire diameters of 1.61 mm max.

#### **Crimping Tools**

The following models are recommended for crimping tools and pressure-welding tools for Fujitsu connectors. Tools for Crimped Connectors (Fujitsu Component)

| Product Name            | Model           |
|-------------------------|-----------------|
| Hand Crimping Tool      | FCN-363T-T005/H |
| Contact Withdrawal Tool | FCN-360T-T001/H |

#### **Tools for Pressure-welded Connectors (Fujitsu Component)**

| Product Name  | Model           |
|---------------|-----------------|
| Hand Press    | FCN-707T-T101/H |
| Cable Cutter  | FCN-707T-T001/H |
| Locator Plate | FCN-367T-T012/H |

# The following models are recommended for tools for OMRON MIL connectors. Tools for Pressure-welded Connectors (OMRON)

| Product Name          | Model     |
|-----------------------|-----------|
| Pressure-welding Tool | XY2B-0002 |
| Attachment            | XY2B-1007 |

#### **Tools for Crimped Connectors (OMRON)**

| Product Name         | Model     |  |  |
|----------------------|-----------|--|--|
| Manual Crimping Tool | XY2B-7007 |  |  |

<sup>\*2.</sup> Crimp Contacts (XG5W-0232) are sold separately.

<sup>\*3.</sup> Applicable wire size is AWG 28 to 24. For applicable conductor construction and more information, visit the OMRON website at www.ia.omron.com.

# 2. Connecting Connector-Terminal Block Conversion Units

#### **Connection Patterns for Connector-Terminal Block Conversion Units**

#### Combination of I/O Units with Connector-Terminal Block Conversion Units

| Unit                  | I/O<br>capacity       | Number of connectors     | Polarity | Connection pattern    | Connecting Cable *     | Connector-Terminal Block<br>Conversion Unit | Wiring method           | Common terminals |  |
|-----------------------|-----------------------|--------------------------|----------|-----------------------|------------------------|---------------------------------------------|-------------------------|------------------|--|
|                       |                       |                          |          |                       |                        | XW2R-J34G-C3                                | Phillips screw          |                  |  |
| CJ1W-OD231            | 32 outputs            | 1 Fujitsu connector      | NPN      | Α                     | XW2Z-□□□PF             | XW2R-E34G-C3                                | Slotted screw (rise up) | No               |  |

#### Terms and Conditions Agreement

#### Read and understand this catalog.

Please read and understand this catalog before purchasing the products. Please consult your OMRON representative if you have any questions or comments.

#### Warranties.

- (a) Exclusive Warranty. Omron's exclusive warranty is that the Products will be free from defects in materials and workmanship for a period of twelve months from the date of sale by Omron (or such other period expressed in writing by Omron). Omron disclaims all other warranties, express or implied.
- (b) Limitations. OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, ABOUT NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OF THE PRODUCTS. BUYER ACKNOWLEDGES THAT IT ALONE HAS DETERMINED THAT THE

PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE.

Omron further disclaims all warranties and responsibility of any type for claims or expenses based on infringement by the Products or otherwise of any intellectual property right. (c) Buyer Remedy. Omron's sole obligation hereunder shall be, at Omron's election, to (i) replace (in the form originally shipped with Buyer responsible for labor charges for removal or replacement thereof) the non-complying Product, (ii) repair the non-complying Product, or (iii) repay or credit Buyer an amount equal to the purchase price of the non-complying Product; provided that in no event shall Omron be responsible for warranty, repair, indemnity or any other claims or expenses regarding the Products unless Omron's analysis confirms that the Products were properly handled, stored, installed and maintained and not subject to contamination, abuse, misuse or inappropriate modification. Return of any Products by Buyer must be approved in writing by Omron before shipment. Omron Companies shall not be liable for the suitability or unsuitability or the results from the use of Products in combination with any electrical or electronic components, circuits, system assemblies or any other materials or substances or environments. Any advice, recommendations or information given orally or in writing, are not to be construed as an amendment or addition to the above warrantv.

See <a href="http://www.omron.com/global/">http://www.omron.com/global/</a> or contact your Omron representative for published information.

#### Limitation on Liability; Etc.

OMRON COMPANIES SHALL NOT BE LIABLE FOR SPECIAL, INDIRECT, INCIDENTAL, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR PRODUCTION OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED IN CONTRACT, WARRANTY, NEGLIGENCE OR STRICT LIABILITY.

Further, in no event shall liability of Omron Companies exceed the individual price of the Product on which liability is asserted.

#### Suitability of Use.

Omron Companies shall not be responsible for conformity with any standards, codes or regulations which apply to the combination of the Product in the Buyer's application or use of the Product. At Buyer's request, Omron will provide applicable third party certification documents identifying ratings and limitations of use which apply to the Product. This information by itself is not sufficient for a complete determination of the suitability of the Product in combination with the end product, machine, system, or other application or use. Buyer shall be solely responsible for determining appropriateness of the particular Product with respect to Buyer's application, product or system. Buyer shall take application responsibility in all cases.

NEVER USE THE PRODUCT FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY OR IN LARGE QUANTITIES WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCT(S) IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

#### Programmable Products.

Omron Companies shall not be responsible for the user's programming of a programmable Product, or any consequence thereof.

#### Performance Data.

Data presented in Omron Company websites, catalogs and other materials is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of Omron's test conditions, and the user must correlate it to actual application requirements. Actual performance is subject to the Omron's Warranty and Limitations of Liability.

#### Change in Specifications.

Product specifications and accessories may be changed at any time based on improvements and other reasons. It is our practice to change part numbers when published ratings or features are changed, or when significant construction changes are made. However, some specifications of the Product may be changed without any notice. When in doubt, special part numbers may be assigned to fix or establish key specifications for your application. Please consult with your Omron's representative at any time to confirm actual specifications of purchased Product.

Errors and Omissions. Information presented by Omron Companies has been checked and is believed to be accurate; however, no responsibility is assumed for clerical, typographical or proofreading errors or omissions.

2018.1

In the interest of product improvement, specifications are subject to change without notice.
