ONSEMÍ...

MOSFET – N-Channel, POWERTRENCH[®]

30 V, 58 A, 9 m Ω

FDD8880, FDD8880-G

General Description

This N–Channel MOSFET has been designed specifically to improve the overall efficiency of DC/DC converters using either synchronous or conventional switching PWM controllers. It has been optimized for low gate charge, low $r_{DS(ON)}$ and fast switching speed.

Features

- $r_{DS(ON)} = 9 \text{ m}\Omega$, $V_{GS} = 10 \text{ V}$, $I_D = 35 \text{ A}$
- $r_{DS(ON)} = 12 \text{ m}\Omega$, $V_{GS} = 4.5 \text{ V}$, $I_D = 35 \text{ A}$
- High Performance Trench Technology for Extremely Low r_{DS(ON)}
- Low Gate Charge
- High Power and Current Handling Capability
- These Devices are Pb-Free and are RoHS Compliant

Applications

• DC/DC Converters

MOSFET MAXIMUM RATINGS (T _C = 25°C unless otherwise noted)					
Symbol		Parameter	Ratings	Unit	
V _{DSS}	Drain to	Source Voltage	30	V	
V _{GS}	Gate to S	Source Voltage	±20	V	
I _D	Drain Current	Continuous (T _A = 25°C, V _{GS} = 10 V) (Note 1)	58	A	
		Continuous (T _A = 25°C, V _{GS} = 4.5 V) (Note 1)	51	A	
		Continuous ($T_{amb} = 25^{\circ}C$, V _{GS} = 10 V, with $R_{\theta JA} = 52^{\circ}C/W$) (Note 1)	13	A	
		Pulsed	Figure 4	А	
E _{AS}	Single Pu	ulse Avalanche Energy (Note 2)	53	mJ	
PD	Power D	issipation	55	W	
	Derate a	bove 25°C	0.37	mW/°C	
T _J , T _{STG}	Operating	g and Storage Temperature	-55 to 175	°C	

MOSFET MAXIMUM RATINGS (T_C = 25°C unless otherwise noted)

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

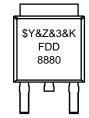

1. Package current limitation is 35A.

2. Starting $T_J = 25^{\circ}$ C, L = 0.14 mH, $I_{AS} = 28$ A, $V_{DD} = 27$ V, $V_{GS} = 10$ V.

V _{DSS} MAX	r _{DS(ON)} MAX	I _D MAX
30 V	9 mΩ @ 10 V	58 A
	12 mΩ @ 4.5 V

THERMAL RESISTANCE VS. MOUNTING PAD AREA

The maximum rated junction temperature, T_{JM} , and the thermal resistance of the heat dissipating path determines the maximum allowable device power dissipation, P_{DM} , in an application. Therefore the application's ambient temperature, T_A (°C), and thermal resistance $R_{\theta JA}$ (°C/W) must be reviewed to ensure that T_{JM} is never exceeded. Equation 1 mathematically represents the relationship and serves as the basis for establishing the rating of the part.

$$P_{DM} = \frac{(T_{JM} - T_A)}{R_{\theta JA}}$$
(eq. 1)

In using surface mount devices such as the TO–252 package, the environment in which it is applied will have a significant influence on the part's current and maximum power dissipation ratings. Precise determination of P_{DM} is complex and influenced by many factors:

- 1. Mounting pad area onto which the device is attached and whether there is copper on one side or both sides of the board.
- 2. The number of copper layers and the thickness of the board.
- 3. The use of external heat sinks.
- 4. The use of thermal vias.
- 5. Air flow and board orientation.
- 6. For non steady state applications, the pulse width, the duty cycle and the transient thermal response of the part, the board and the environment they are in.

onsemi provides thermal information to assist the designer's preliminary application evaluation. Figure 21 defines the $R_{\theta JA}$ for the device as a function of the top copper (component side) area. This is for a horizontally positioned FR–4 board with 1oz copper after 1000 seconds of steady state power with no air flow. This graph provides the necessary information for calculation of the steady state junction temperature or power dissipation. Pulse

applications can be evaluated using the **onsemi** device Spice thermal model or manually utilizing the normalized maximum transient thermal impedance curve.

Thermal resistances corresponding to other copper areas can be obtained from Figure 21 or by calculation using Equation 2 or 3. Equation 2 is used for copper area defined in inches square and Equation 3 is for area in centimeters square. The area, in square inches or square centimeters is the top copper area including the gate and source pads.

$$R_{\theta JA} = 33.32 + \frac{23.84}{(0.268 + Area)}$$
 Area in Inches Squared
(eq. 2)

$$R_{\theta JA} = 33.32 + \frac{154}{(1.73 + \text{Area})}$$
 Area in Inches Squared (eq. 3)

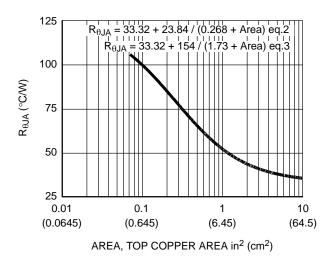

Figure 21. Thermal Resistance vs. Mounting Pad Area
