Please note: As part of the Fairchild Semiconductor integration, some of the Fairchild orderable part numbers will need to change in order to meet ON Semiconductor's system requirements. Since the ON Semiconductor product management systems do not have the ability to manage part nomenclature that utilizes an underscore (_), the underscore (_) in the Fairchild part numbers will be changed to a dash (-). This document may contain device numbers with an underscore (_). Please check the ON Semiconductor website to verify the updated device numbers. The most current and up-to-date ordering information can be found at www.onsemi.com. Please email any questions regarding the system integration to Fairchild_questions@onsemi.com.

FSA3357

Low Voltage SP3T Analog Switch (3:1 Multiplexer/Demultiplexer)

General Description

The FSA3357 is a high performance, single-pole/triple-throw (SP3T) Analog Switch or 3:1 Multiplexer/Demultiplexer. The device is fabricated with advanced sub-micron CMOS technology to achieve high speed enable and disable times and low On Resistance. The break before make select circuitry prevents disruption of signals on the B₀, B₁, or B₂ Ports due to the switches temporarily being enabled during select pin switching. The device is specified to operate over the 1.65 to 5.5V V_{CC} operating range. The control input tolerates voltages up to 5.5V independent of the V_{CC} operating range.

Features

- Useful in both analog and digital applications
- Space saving US8 8-lead surface mount package
- Low On Resistance; < 9Ω on typ @ 3.3V V_{CC}
- Broad V_{CC} operating range; 1.65V to 5.5V
- Rail-to-Rail signal handling
- Power down high impedance control input
- Overvoltage tolerance of control input to 7.0V
- Break before make enable circuitry
- 250 MHz - 3dB bandwidth
- Space saving Pb-Free MicroPak™ packaging

Applications

- Cell Phone
- PDA
- Video

DC Electrical Characteristics (Continued)

Note 4: Measured by the voltage drop between A and B_n pins at the indicated current through the switch. On Resistance is determined by the lower of the voltages on the two (A or B_n Ports).

Note 5: Parameter is characterized but not tested in production.

Note 6: $\Delta R_{ON} = R_{ON\ max} - R_{ON\ min}$ measured at identical V_{CC} , temperature and voltage levels.

Note 7: Flatness is defined as the difference between the maximum and minimum value of On Resistance over the specified range of conditions.
