2.5V / 3.3V 1:2 Differential LVPECL Clock / Data Fanout Buffer

Multi-Level Inputs with Internal Termination

Description

The NB6L611 is a differential 1:2 clock or data fanout buffer. The differential inputs incorporate internal 50 Ω termination resistors that are accessed through the VTD pins and will accept LVPECL, CML, LVDS, LVCMOS or LVTTL logic levels.

The V_{REFAC} reference output can be used to rebias capacitor-coupled differential or single-ended input signals. When used, decouple V_{REFAC} with a 0.01 μ F capacitor and limit current sourcing or sinking to 0.5 mA. When used, decouple V_{REFAC} with a 0.01 μ F capacitor and limit current sourcing or sinking to 0.5 mA. When not used, V_{REFAC} output should be left open.

The device is housed in a small 3x3 mm 16 pin QFN package.

The NB6L611 is a member of the ECLinPS MAX[™] family of high performance clock and data management products.
