

NCN2500

USB Single Channel Transceiver

The NCN2500 Integrated Circuit is a single channel transceiver designed to accommodate the physical USB Port with a microcontroller digital I/O. The part is fully USB compliant and supports the full 12 Mbps speed. On the other hand, the NCN2500 device includes the pullup resistors as defined by the USB-ECN new specifications.

Features

- Compliant to the USB Specification, Version 2.0, Low and Full Speed
- Very Small Footprint Due to the QFN-16 Package
- Integrated D+/D- Pullup Resistors
- Operates Over the Full 1.5 V to 3.6 V Supply
- Pb-Free Package is Available*

Typical Applications

- Portable Computer
- Cellular Phone

Figure 1. Typical Application

*For additional information on our Pb-Free strategy and soldering details, please download the ON Semiconductor Soldering and Mounting Techniques Reference Manual, SOLDERRM/D.

PIN FUNCTION DESCRIPTION

Pin	Symbol	Function	Description
1	DSPD	INPUT	The DSPD logic level (Data Speed) activates the Low or the High speed operation on the USB port. DSPD = Low Low Speed, RPU1 and RPU2 connected to D- DSPD = High Full Speed, RPU1 and RPU2 connected to D+
2	RCV	OUTPUT	This pin interfaces the USB signals with the microcontroller digital line. The data present on the D+/D- pins are translated onto this signal.
3	Vp	I/O	This pin, associated with Vm, is an I/O system interface signal depending upon the $\overline{OE}$ logic state: $\overline{OE}$ = Low Vp is a Plus driver Input (from μ C to USB bus) $\overline{OE}$ = High Vp is a Plus receiver Output (from USB bus to μ C)
4	Vm	I/O	This pin, associated with Vp, is an I/O system interface signal depending upon the $\overline{OE}$ logic state: $\overline{OE}$ = Low Vm is a Minus driver Input (from μ C to USB bus) $\overline{OE}$ = High Vm is a Minus receiver Output (from USB bus to μ C)
5	$\overline{EN_VObus}$	INPUT	Digital input to control the VObus voltage. $\overline{EN_VObus}$ = Low VObus connected to Vreg $\overline{EN_VObus}$ = High VObus disconnected from Vreg (Hi Z)
6	GND	PWR	This pin carries the digital and USB ground level. High Quality PCB design shall be observed to avoid uncontrolled voltage spikes.
7	SPND	INPUT	The SPND digital signal (SUSPEND) selects the operation mode to reduce the power supply current. SPND = Low Normal operation SPND = High Suspend mode, no activity takes place
8	NC	-	No Connection, shall be neither grounded, nor connected to Vcc or Vbus.
9	$\overline{OE}$	INPUT	This pin activates the operating mode of the D-/D+ signals. $\overline{OE}$ = Low logic level Data are transmitted onto the USB bus $\overline{OE}$ = High logic level Data are received from the USB bus
10	D-	I/O	This pin is connected to the USB Minus Data line I/O. The data direction depends upon the $\overline{OE}$ logic state.
11	D+	I/O	This pin is connected to the USB Plus Data line I/O. The data direction depends upon the $\overline{OE}$ logic state.
12	Vreg	PWR	This pin provides a 3.3 V regulated voltage to supply the internal USB blocks and the external termination bias resistor. An external circuit can be connected to this LDO, assuming the current does not extend the maximum rating (50 mA).
13	VObus	OUTPUT, PWR	This pin connects the Vreg voltage to the 1.5 k external pullup resistor. The VObus voltage is controlled by the logic states present Pin 5. The R_{DSon} of the internal PMOS device (reference S5 in the Block Diagram) is 10 Ω typical.
14	Vusb	PWR	This pin is connected to the USB port +Vcc supply voltage.
15	Vcc	PWR	This pin provides the interface power supply. The power source can be an external supply or can be derived from the USB + Vusb voltage.
16	EN_RPU	INPUT	This pin activates or deactivate the internal RPU1 and RPU2 pullup resistors: EN_RPU = H RPU1 and RPU2 activated EN_RPU = L RPU1 and RPU2 deactivated

MAXIMUM RATINGS

Rating	Symbol	Value	Unit
Power Supply Voltage	V _{CC}	6.0	V
Digital Input Pins	V _{IND}	-0.5 V < V _{IN} < V _{CC} + 0.5 V, but < 6.0 V	V
Digital Input Pins	V _{ID}	-0.5 V < V _{IN} < AGND + 0.5 V, but < 6.0 V	V
Digital Input Pins	I _{BIAS}	-35 mA < I _{BIAS} < 35 mA	mA
ESD Capability, HBM (Note 1) V _{usb} , D+, D-, GND Any Other Pins Machine Model, Any Pins	V _{ESD}	10 2.0 200	kV kV V
QFN-16 Package Power Dissipation @ Tamb = +85°C Thermal Resistance, Junction-to-Air (R _{θJA})	P _{DS} R _{θJA}	470 85	mW °C/W
Operating Ambient Temperature Range	T _A	-40 to +85	°C
Operating Junction Temperature Range	T _J	-40 to +125	°C
Maximum Junction Temperature (Note 2)	T _{Jmax}	+150	°C
Storage Temperature Range	T _{sg}	-65 to +150	°C

Maximum ratings are those values beyond which device damage can occur. Maximum ratings applied to the device are individual stress limit values (not normal operating conditions) and are not valid simultaneously. If these limits are exceeded, device functional operation is not implied, damage may occur and reliability may be affected.

- Human Body Model, R = 1500 Ω, C = 100 pF; Machine Model.
- Absolute Maximum Rating beyond which damage(s) to the device may occur.

ELECTRICAL CHARACTERISTICS

Characteristic	Symbol	Pin	Min	Typ	Max	Unit
----------------	--------	-----	-----	-----	-----	------

DIGITAL PARAMETERS SECTION @ 1.5 V < Vcc < 3.6 V (–40°C to +85°C ambient temperature, unless otherwise noted.)

NOTE: Digital inputs undershoot < –0.3 V to ground, digital inputs overshoot < 0.3 V to Vcc.

High Level Input Voltage DSPD, Vp, Vm, $\overline{\text{EN_VObus}}$, SPND, $\overline{\text{OE}}$, EN_RPU	V _{IH}	1, 3, 4, 5, 7, 9, 16	0.80*Vcc	–	–	V

NCN2500

TYPICAL APPLICATIONS

In this application, the two internal pullup resistors (RPU1 and RPU2) are used to bias the USB line. Consequently, the VObus voltage is deactivated (Pin 5 connected to Vcc).
