Please note: As part of the Fairchild Semiconductor integration, some of the Fairchild orderable part numbers will need to change in order to meet ON Semiconductor's system requirements. Since the ON Semiconductor product management systems do not have the ability to manage part nomenclature that utilizes an underscore (_), the underscore (_) in the Fairchild part numbers will be changed to a dash (-). This document may contain device numbers with an underscore (_). Please check the ON Semiconductor website to verify the updated device numbers. FPF2411 — IntelliMAX™ 6 V / 6 A - Rated Bi-Directional Switch with Slew Rate Control and RCB

Features

- Capability: 6 V
- Low R_{ON}
  - 10 mΩ at 5 V at PWRA or PWRB (Typ.)
  - 12 mΩ at 3.8 V at PWRA or PWRB (Typ.)
- Maximum Current Capability: 6 A (Bi-Directional)
- Ultra-Low I_Q:<1 µA
- Active LOW Control Pin
- 2 ms Long Slew Rate
- Reverse Current Blocking (RCB) during OFF
- Robust ESD Capability:
  - 5 kV HBM, 2 kV CDM
  - 15 kV Air Discharge
  - 8 kV Contact Discharge Under IEC 61000-4-2

Applications

- Smartphone / Tablet PC
- Mobile Devices
- Portable Media Devices

Description

The FPF2411 is a 6 V / 6 A-rated bi-directional load switch, consisting of a slew-rate-controlled, low-on-resistance, P-channel MOSFET switch with protection features. The slew-rate-controlled turn-on characteristic prevents inrush current and the resulting excessive voltage droop on the input power rails. The input voltage range operates from 2.3 V to 5.5 V.

Bi-directional switching allows reverse current from V_{OUT} to V_{IN}. The switching is controlled by active-LOW logic input the ONB pin. The FPF2411 is capable of interfacing directly with low-voltage control signal General-Purpose Input / Output (GPIO).

The FPF2411 is available in 12-bump, 1.235 mm x 1.625 mm Wafer-Level Chip-Scale Package (WLCSP) with 0.4 mm pitch.

Absolute Maximum Ratings

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only.

Operation and Application Description

The FPF2411 is an ultra-low-R_{ON} P-channel load switch with bi-directional controlled turn-on and Reverse Current Blocking (RCB). The core is a 12 mΩ P-channel MOSFET and controller capable of functioning over a wide input operating range of 2.3 V to 5.5 V. The ONB pin, active-LOW; controls the state of the switch. RCB functionality blocks unwanted reverse current during OFF states by power switch isolation between PWRA and PWRB.

Inrush Current

Inrush current occurs when the device is turned on. Inrush current is dependent on output capacitance and slew rate control capability, as expressed by:

$$I_{INRUSH} = C_{OUT} \times \frac{V_{IN} - V_{INITIAL}}{t_R} + I_{LOAD}$$

where:

C_{OUT}: Output capacitance;
t_R: Slew rate or rise time at V_{OUT};
V_{IN}: Input voltage;
$V_{INITIAL}$: Initial voltage at C_{OUT}, usually GND; and
I_{LOAD}: Load current.

Higher inrush current causes higher input voltage drop, depending on the distributed input resistance and input capacitance. High inrush current can cause problems.

FPF2411 has a 3 ms of slew rate capability under 4.2 V_{IN} at 1 µF of C_{OUT} and 10 Ω of R_L. Inrush current can be minimized and no input voltage drop appears, as shown in Figure 16.

Reverse-Current Blocking

The reverse-current blocking feature protects the input source against current flow from output to input when the load switch is off by changing the internal body diode direction.

Bypass Capacitor

To limit the voltage drop on the input supply caused by transient inrush current when the switch turns on into a discharged load capacitor; a capacitor must be placed between the PWRA or PWRB and GND pins. A ceramic capacitor of at least 1 µF placed close to the pins is usually sufficient.

Board Layout

For best performance, all traces should be as short as possible. To be most effective, the input and output capacitors should be placed close to the device to minimize the effect that parasitic trace inductance on normal and short-circuit operation. Using wide traces or large copper planes for all pins (PWRA, PWRB, ONB, and GND) minimizes the parasitic electrical effects and the case-to-ambient thermal impedance.

WLCSP Packing - Embossed Tape
FPF2411BUCX Pin1 at 1 o'clock Rev0

FAIRCHILD SEMICONDUCTOR®

Packing Description:

WLCSP products are classified under Moisture Sensitive Level 1 and are packed in moisture barrier bag for added protection.

The carrier tape is made from dissipative polystyrene or polycarbonate resin. The cover tape is a multilayer film primarily composed of polyester film, adhesive layer, heat activated sealant, and anti-static sprayed agent. These reeled parts in standard option are shipped with 3000 units per 178 mm diameter reel. Up to three reels are packed in each intermediate box. The reels is made of polystyrene plastic (anti-static coated or intrinsic).

These full reels are individually barcode labeled and placed inside a pizza box made of recyclable corrugated brown paper with a Fairchild logo printing. The reel is packed single reel in the pizza box. And these pizza boxes are placed inside a barcode labeled shipping box which comes in different sizes depending on the number of parts shipped.

LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF FAIRCHILD SEMICONDUCTOR CORPORATION.

As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury of the user.
2. A critical component in any component of a life support, device, or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

ANTI-COUNTERFEITING POLICY

Fairchild Semiconductor Corporation's Anti-Counterfeiting Policy. Fairchild's Anti-Counterfeiting Policy is also stated on our external website, www.fairchildsemi.com, under Sales Support.

Counterfeiting of semiconductor parts is a growing problem in the industry. All manufacturers of semiconductor products are experiencing counterfeiting of their parts. Customers who inadvertently purchase counterfeit parts experience many problems such as loss of brand reputation, substandard performance, failed applications, and increased cost of production and manufacturing delays. Fairchild is taking strong measures to protect ourselves and our customers from the proliferation of counterfeit parts. Fairchild strongly encourages customers to purchase Fairchild parts either directly from Fairchild or from Authorized Fairchild Distributors who are listed by country on our web page cited above. Products customers buy either from Fairchild directly or from Authorized Fairchild Distributors are genuine parts, have full traceability, meet Fairchild's quality standards for handling and storage and provide access to Fairchild's full range of up-to-date technical and product information. Fairchild and our Authorized Distributors will stand behind all warranties and will appropriately address any warranty issues that may arise. Fairchild will not provide any warranty coverage or other assistance for parts bought from Unauthorized Sources. Fairchild is committed to combat this global problem and encourage our customers to do their part in stopping this practice by buying direct or from authorized distributors.
