POWER ROCKER SWITCH

AJ8 (J8) SWITCHES

AJ8 switch standard actuator

AJ8 switch Wide actuator

RoHS Directive compatibility information http://www.nais-e.com/

FEATURES

- 1. Power rocker switches for safety requirements.
- All versions comply with ClassII EN61058-1 insulation grade.
 Insulation distance: 8mm Min.
 Contact gap: 3mm Min.
- International Standard-approved status

		Already approved
AJ8	Standard actuator type	UL, CSA, VDE, TÜV, ÖVE, KEMA, SEMKO, NEMKO, DEMKO, FIMKO, SEV
switch	Wide actuator type	UL, CSA, VDE, TÜV, SEMKO, NEMKO, DEMKO, FIMKO, SEV, KEMA, ÖVE

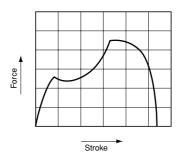

2. High inrush current resistance is ideal for office automation equipment.

Туре	Inrush	Contact rating	Expected life
AJ8	160A	16A 250V AC	Min.10 ⁴

3. Operation that only requires a light touch

The best operation characteristics were sought by analyzing touch data gathered by monitoring 1,500 people.

• Power Rocker Switch touch curve

4. A broad product line

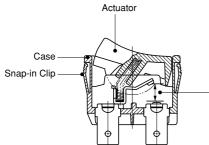

The AJ8 switches are available with five different types of terminals:quick-connect terminals, soldering terminals, PC board terminals, right angle terminals and left angle terminals.

- **5. Eight standard actuator colors** White, black, red, dark gray, light gray, blue, green, yellow
- 6. Cadmium-free contact compatibility.

PRECAUTIONS WHEN USING CADMIUM-FREE CONTACT TYPE

Models with cadmium-free contacts have been introduced in order to reduce environmentally harmful substances. ("F" is affixed to the end of the part number.) We ask customers who are currently using products with cadmium-containing contacts (no "F" at the end of the part number) to please make the switch to models with cadmium-free contacts. When switching, operating life may differ depending on the load. Please be sure to verify this by conducting an evaluation using actual equipment.

CONSTRUCTION

Contact gap (more than 3mm)

The EN60950 (intended for office automation equipment) conforms with a 3mm gap.

When directly opening or closing the primary power supply side, a contact gap of at least 3mm is required in order to ensure safety.

NOTES

1. Switch mounting

Mount the switch with the hole cutting dimensions shown in the dimensions. Contact us if you are considering using a panel of other than the recommended size and shape.

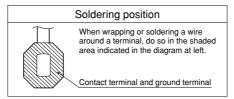

2. Regarding fastening lead wires to terminals

1) When connecting the tab terminals, use a .250 Quick-connect and insert the terminals straight in.

If they are skewed, the terminals will require excessive insertion force. In addition, there is some variation in the insertion force required for different receptacles from different manufacturers, so confirm how much force is needed under actual conditions.

Do not solder wires onto tab terminals.
2) With manual soldering: Complete the soldering connection work within 3 seconds with the tip of the soldering iron (60W soldering iron) at a temperature of 420°C or lower, and take care not to apply any force to the terminal area.

Avoid touching the switch with soldering iron.

Refer to the diagram above, "soldering position," for details on the position where a wire should be soldered to a terminal. When soldering PC board terminals, keep soldering time to within 5 s at 270°C soldering bath or within 3 s at 350°C soldering bath.

- The terminals should be connected in such a way that they are not under constant stress from the connecting wires.
- 4) Terminal material is copper alloy which may discolor due to finger's oil or after a long time. But that discoloration does not effect actual performance.

3. Resistance to chemicals

To clean the switch unit, use a neutral detergent diluted with water.

Do not use acidic or alkaline solvents as they may damage the switch.

Furthermore, be careful not to get any of the detergent solution inside of the switch while cleaning it.

4. Environment

Avoid using and storing these switches in a location where they will be exposed to corrosive gases, silicon, or high dust levels, all of which can have an adverse effect on the contacts.

5. Take care not to drop the product as it may impair perforance.

REFERENCE

1. Outline of UL1054 test

Overload test AJ8: 20A 250V AC (Power factor 0.75 to 0.8)

50 operation

Endurance test AJ8: 16A 250V AC

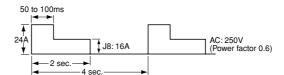

(Power factor 0.75 to 0.8)

6×10³ operation

After testing, temperature rise of terminals should be less than 30°C and no abnormality should be observed in characteristics.

2. Outline of EN61058-1 test

After switching 5×10^3 times on the above load condition at both $85^{+5}_{~0}^{\circ}\text{C}$ and $25\pm10^{\circ}\text{C}$, temperature rise of terminals should be less than 55°C and no abnormality should be observed in characteristics.
