

QuickNet™ 4 to 1 Conversion Harness Cable Assemblies

technical information

To meet the needs for fiber cable plant migration to higher speeds, Panduit offers 4 to 1 conversion harness assemblies. As part of the Panduit High Speed Data Transport (HSDT) solution, these passive fiber cables provide a cost-effective solution for interconnecting high speed switches equipped with MPO modular transceivers to switches equipped with LC transceivers.

The PanMPO end is wired as four separate transmit and receive fibers which are connected to four LC connector ends. The four LC connector ends can be directly attached to co-located switch gear or connected to an existing LC-based structured cabling system to allow for distribution to different locations in the data center.
