Management-Software for handling communication paths in connection with CMD software packages and packages from other suppliers

Product Description

Automation Xplorer enables network-wide view on all INTERBUS masters and INTERBUS PCP devices accessible via Ethernet and INTERBUS down to lower-level busses. Automation Xplorer calculates and knows all communication paths (communication references) to these devices. However, a special function is the connection of external tools (e.g., parameterization tool for welding controllers) in order to parameterize the according INTERBUS devices (e.g. welding controller) from a central location. The communication path calculated by Automation Xplorer is transferred to the external tool in order for this tool to communicate with the relevant device via the network.

Key Commercial Data

Packing unit	1 pc
GTIN	 4 017918 476113
GTIN	4017918476113
Sales Key	11
