### Notes from Tables:

- The above transformers have been tested and approved by Pulse's IC partners and are cited in the appropriate datasheet or evaluation board documentation at these companies. To determine which IC and IC companies are matched with the above transformers, please refer to the IC cross reference on the Pulse web page. See the Spyglass transformer matrix on the next page for other winding configurations that can be made available.
- The listed transformers are designed to meet basic insulation (1.4mm creepage and clearance with 1500Vdc isolation). Lower cost transformers with operational insulation (1500Vdc isolation with no creepage and clearance spacings) are available. Please contact Pulse Power Applications Engineering for details.
- To determine if the transformer is suitable for your application, it is necessary to ensure that the temperature rise of the component (ambient plus temperature rise) does not exceed its operating temperature. To determine the approximate temperature rise of the transformer, refer to the graphs below.
- Add suffix "T" to the part number for Tape & Reel package (i.e. PA0168T).

$$\text{Total Power Dissipation (W)} = .001 * (\text{DCR}_{\text{primary}} * \text{Irms}_{\text{primary}}^2 + \text{DCR}_{\text{secondary}} * \text{Irms}_{\text{secondary}}^2) + \text{Core Loss (W)}$$
