NOTICE

- o These specification sheets are the proprietary product of SHARP CORPORATION ("SHARP) and include materials protected under copyright of SHARP. Do not reproduce or cause any third party to reproduce them in any form or by any means, electronic or mechanical, for any purpose, in whole or in part, without the express written permission of SHARP.
- The application examples in these specification sheets are provided to explain the representative applications of the device and are not intended to guarantee any industrial property right or other rights or license you to use them. SHARP assumes no responsibility for any problems related to any industrial property right of a third party resulting from the use of the device.
- The device listed in these specification sheets was designed and manufactured for use in Telecommunication equipment (terminals)
- o In case of using the device for applications such as control and safety equipment for transportation (aircraft, trains, automobiles, etc.), rescue and security equipment and various safety related equipment which require higher reliability and safety, take into consideration that appropriate measures such as fail-safe functions and redundant system design should be taken.
- Do not use the device for equipment that requires an extreme level of reliability, such as aerospace applications, telecommunication equipment (trunk lines), nuclear power control equipment and medical or other equipment for life support.
- o SHARP assumes no responsibility for any damage resulting from the use of the device which does not comply with the instructions and the precautions specified in these specification sheets.
- o Contact and consult with a SHARP sales representative for any questions about this device.

[For handling and system design]

- (1) Do not scratch the surface of the polarizer film as it is easily damaged.
- (2) If the cleaning of the surface of the LCD panel is necessary, wipe it swiftly with cotton or other soft cloth. Do not use organic solvent as it damages polarizer.
- (3) Water droplets on polarizer must be wiped off immediately as they may cause color changes, or other defects if remained for a long time.
- (4) Since this LCD panel is made of glass, dropping the module or banging it against hard objects may cause cracks or fragmentation.
- (5) Certain materials such as epoxy resin (amine's hardener) or silicone adhesive agent (de-alcohol or de-oxym) emits gas to which polarizer reacts (color change). Check carefully that gas from materials used in system housing or packaging do not hart polarizer.
- (6) Liquid crystal material will freeze below specified storage temperature range and it will not get back to normal quality even after temperature comes back within specified temperature range. Liquid crystal material will become isotropic above specified temperature range and may not get back to normal quality. Keep the LCD module always within specified temperature range.
- (7) Do not expose LCD module to the direct sunlight or to strong ultraviolet light for long time.
- (8) If the LCD driver IC (COG) is exposed to light, normal operation may be impeded. It is necessary to design so that the light is shut off when the LCD module is mounted.
- (9) Do not disassemble the LCD module as it may cause permanent damage.
- (10) As this LCD module contains components sensitive to electrostatic discharge, be sure to follow the instructions in below.
- ① Operators
 - Operators must wear anti-static wears to prevent electrostatic charge up to and discharge from human body.
- ② Equipment and containers

 Process equipment such as conveyer, soldering iron, working bench and containers may possibly generate electrostatic

SPEC No. LCP-05032F

MODEL No.

LQ022B8UD05

PAGE

2

charge up and discharge. Equipment must be grounded through 100Mohms resistance. Use ion blower.

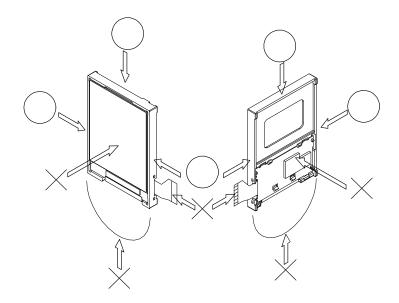

③ Floor

Floor is an important part to leak static electricity which is generated from human body or equipment. There is a possibility that the static electricity is charged to them without leakage in case of insulating floor, so the countermeasure (electrostatic earth: $1 \times 10^8 \Omega$) should be made.

4 Humidity

Proper humidity of working room may reduce the risk of electrostatic charge up and discharge. Humidity should be kept over 50% all the time.

- ⑤ Transportation/storage
 - Storage materials must be anti-static to prevent causing electrostatic discharge.
- 6 Others
 - Protective film is attached on the surface of LCD panel to prevent scratches or other damages. When removing this protective film, remove it slowly under proper anti-ESD control such as ion blower.
- (11) Hold LCD very carefully when placing LCD module into the system housing. Do not apply excessive stress or pressure to LCD module. Do not to use chloroprene rubber as it may affect on the reliability of the electrical interconnection.
- (12) Do not hold or touch LCD panel to flex interconnection area as it may be damaged.
- (13) As the binding material between LCD panel and flex connector mentioned in 12) contains an organic material, any type of organic solvents are not allowed to be used. Direct contact by fingers is also prohibited.
- (14) When carrying the LCD module, place it on the tray to protect from mechanical damage. It is recommended to use the conductive trays to protect the CMOS components from electrostatic discharge. When holding the module, hold the Plastic Frame of LCD module so that the panel, COG and other electric parts are not damaged.

- (15) Do not touch the COG's patterning area. Otherwise the circuit may be damaged.
- (16) Do not touch LSI chips as it may cause a trouble in the inner lead connection.
- (17) Place a protective cover on the LCD module to protect the glass panel from mechanical damages.
- (18) LCD panel is susceptible to mechanical stress and even the slightest stress will cause a color change in background. So make sure the LCD panel is placed on flat plane without any continuous twisting, bending or pushing stress.
- (19) Protective film is placed onto the surface of LCD panel when it is shipped from factory. Make sure to peel it off before assembling the LCD module into the system. Be very careful not to damage LCD module by electrostatic discharge when

SPEC No. LCP-05032F

MODEL No. LQ022B8UD05

PAGE

3

peeling off this protective film. Ion blower and ground strap are recommended.

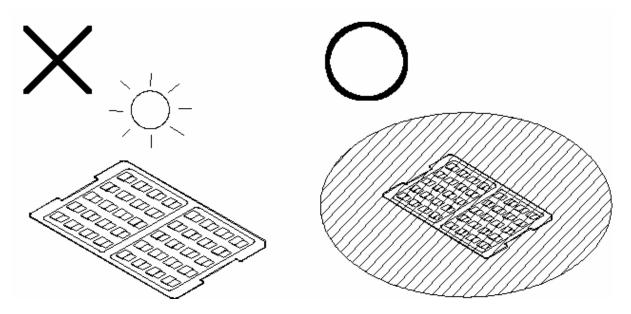

- (20) Make sure the mechanical design of the system in which the LCD module will be assembled matches specified viewing angle of this LCD module.
- (21) This LCD module does not contain nor use any ODS (1,1,1-Trichloroethane, CCL4) in all materials used, in all production processes.

[For operating LCD module]

- (1) Do not operate or store the LCD module under outside of specified environmental conditions.
- (2) Do not display still picture or the display over 2 hours as this will damage the liquid crystal.
- (3) As opto-electrical characteristics of LCD will be changed, dependent on the temperature, the confirmation of display quality and characteristics has to be done after temperature is set at 25 °C and it becomes stable.

[Precautions for Storage]

- (1) Do not expose the LCD module to direct sunlight or strong ultraviolet light for long periods. Store in a dark place.
- (2) The liquid crystal material will solidify if stored below the rated storage temperature and will become an isotropic liquid if stored above the rated storage temperature, and may not retain its original properties. Only store the module at normal temperature and humidity $(25\pm5^{\circ}\text{C}, 60\pm10^{\circ}\text{RH})$ in order to avoid exposing the front polarizer to chronic humidity.
- (3) Keeping Method
 - a. Don't keeping under the direct sunlight.
- b. Keeping in the tray under the dark place.

- (4) Do not operate or store the LCD module under outside of specified environmental conditions.
- (5) Be sure to prevent light striking the chip surface

SPEC No. LCP-05032F

MODEL No.

LQ022B8UD05

PAGE

4

[Other Notice]

- (1) Do not operate or store the LCD module under outside of specified environmental conditions.
- (2) As electrical impedance of power supply lines (VEE-VSS, VDD-VSS) are low when LCD module is working, place the de-coupling capacitor near by LCD module as close as possible.
- (3) Reset signal must be sent after power on to initialize LSI. LSI does not function properly until initialize it by reset signal.
- (4) Generally, at power on, in order not to apply DC charge directly to LCD panel, supply logic voltage first and initialize LSI logic function including polarity alternation. Then supply voltage for LCD bias. At power off, in order not to apply DC charge directly to LCD panel, execute Power OFF sequence and Discharge command.
- (5) Don't touch to PWB surface, exposed IC chip, electric parts and other parts, to any electric, metallic materials.
- (6) No bromide specific fire-retardant material is used in this module.
- (7) Because including CMOS in this model, there is possibility that this module works wrongly by the noise from the antenna and so on. Please implement enough shields on user's product.

[Precautions for Discarding Liquid Crystal Modules]

COG : After removing the LSI from the liquid crystal panel, dispose of it in a similar way to circuit boards

from electronic devices.

LCD panel: Dispose of as glass waste. This LCD module contains no harmful substances. The liquid crystal panel

contains no dangerous or harmful substances. The liquid crystal panel only contains an extremely small amount of liquid crystal (approx.100mg) and therefore it will not leak even if the panel should break.

PWB/FPC: Dispose of as similar way to circuit board from electric device.

1. Application

This data sheet is to introduce the specification of LQ022B8UD05, active matrix 262,144 colors LCD module. The LCD module controlled by Driver ICs (LR38825 / LH169CH).

If any problem occurs concerning the items not stated in this specification, it must be solved sincerely by both parties after deliberation.

As to basic specification of driver IC refer to the IC specification and handbook.

2. Construction and Outline

Construction: LCD panel, Driver (COG), FPC with electric components,

4 pieces White LED lump, prism sheet, diffuser, light guide and reflector, plastic frame to fix them mechanically.

Outline: See Fig.12 (page 22).

Connection: 35 pins; 0.3mm pitch ZIF FPC connector. Correspondable connector: FF02B35SS1 (JAE)

3. Mechanical Specification

Table 1

Parameter Specifications		Unit	
Outlin	e dimensions *1	$42.1 \text{ (W)} \times 56.6 \text{ (H)} \times 4.2 \text{ (D)}$	mm
LCD	Active area	Active area 34.848 (W) × 43.56 (H)	
Panel	Display format	176×RGB(W)×220(H)	-
	Dot pitch	0.066 (W) ×0.198 (H)	mm
	Base color *2	Normally white	-
	Mass	Approx 12.1	g

^{*1} See Fig.12 (page 22)

^{*2} Due to the characteristics of the LC material, the colors vary with environmental temperature.

Note 2) Brightness is measured as shown in Fig.7, and is defined as the brightness of all pixels "White" at the center of display area on optimum contrast.

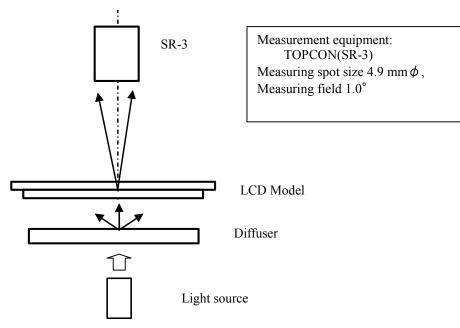

Fig.7 Optical characteristics Test Method (Brightness)

Note 3) Contrast ratio is defined as follows:

Co= Luminance(brightness) all pixcels "White"
Luminance(brightness) all pixcels "dark"

Note 4) Response time is defined as follows:

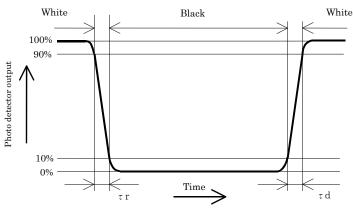

Fig.8 Response time (TFT)

SPEC No.

LCP-05032F

MODEL No.

LQ022B8UD05

PAGE

18

Note 5) Reflectance is defined as follows:

7. Lot Number identification

Lot numbering and location are specified as follows.

①product year (lower 2 digits)

09:2009, 10:2010,

2product month

A: JANUARY, B: FEBRUARY, C: MARCH,, L: DECEMBER

3 Serial number

000001 ~ 999999

4 Record of Revision 2

A:1st revision, B:2nd revision, C:3rd revision,

⑤Product maker

W: SHARP

©Composition parts management code 5

A, B, C, D, ...

8. Packing specifications

(8-1) Details of packing

1) Packing materials :Table.15 (8-2) Reliability

2) Packing style

:Fig.11

1) Vibration test

Table.14

TIDI GCIOTI CODE		<u> rabicir</u>	<u> </u>		
Item	Test				
Frequency	5 Hz to 50 Hz (3 minutes cycle)				
Direction	Up-Down, Left-Right, Front-Back (3 directions)				
Period	Up-Dow	Left-Right	Front-Back	Total	
	60min	15min	15min	90min	

The frequency should start at 5 Hz and vary continuously.

Total amplitude 20mm 0.2mm 20mm 0.2mm (For 9.8m/s²) Frequency 5 Hz50Hz5Hz 50Hz0 0 0 | ← 3 minutes

2) Drop test

Drop height: 750mm

Number of drop: 10timers (Ddrop sequence: 1 corner, 3 edges, 6 faces)

 $\begin{array}{c} {\rm MODEL} \quad {\rm No.} \\ LQ022B8UD05 \end{array}$

PAGE

20

(8-3)Packing quantities

250 modules (max) per master carton

(8-4)Packing weight

About 7.7kg

(8-5)Paking outline dimensions

382mm × 578mm × 255mm

(Packing materials)

Table.15

	Parts name	Materials
1	Master carton	Corrugate card board
2	Under pad	Corrugate card board
3	Inside sleeve	Corrugate card board
4	Outside sleeve	Corrugate card board
5	Tray for packing	Polystyrene with anti-static treatment +anti-static polystyrene
6	OPP tape	Polypropylene
7	Protective bag	Polyethylene with anti-static treatment +anti-static polyethylene
