These specification sheets are the proprietary product of SHARP CORPORATION("SHARP") and include materials protected under copyright of SHARP. Do not reproduce or cause any third party to reproduce them in any form or by any means, electronic or mechanical, for any purpose, in whole or in part, without the express written permission of SHARP.

In case of using the device for applications such as control and safety equipment for transportation(aircraft, trains, automobiles, etc.), rescue and security equipment and various safety related equipment which require higher reliability and safety, take into consideration that appropriate measures such as fail-safe functions and redundant system design should be taken.

Do not use the device for equipment that requires an extreme level of reliability, such as aerospace applications, telecommunication equipment(trunk lines), nuclear power control equipment and medical or other equipment for life support.

SHARP assumes no responsibility for any damage resulting from the use of the device, which does not comply with the instructions, and the precautions specified in these specification sheets.

Contact and consult with a SHARP sales representative for any questions about this device.

1. Application

This specification applies to a color TFT-LCD module, LQ070Y3DG3B.

2. Overview

This module is a color active matrix LCD module incorporating amorphous silicon TFT (Thin Film Transistor). It is composed of a color TFT-LCD panel, driver ICs, power supply circuit, a backlight unit, and a touch panel. Graphics and texts can be displayed on a 800×3×480 dots panel with 16,194,277 colors by using 24bit digital signal interface (RGB×8bit) and supplying +3.3V DC supply voltage for TFT-LCD panel driving and supply voltage for backlight.

In this TFT-LCD panel, low reflection / color filters of excellent color performance and backlights of high brightness are incorporated to realize brighter and clearer pictures, making this model optimum for use in multi-media applications.

Optimum viewing direction is 6 o'clock.

White-LED Backlight-driving DC/DC converter is not built in this module.

t5	200	—	ms	
t6	180	—	ms	*1
t7	5	—	ms	*1

*1 : As for the power sequence for backlight, it is recommended to apply above mentioned input timing. If the backlight is lit on and off at a timing other than shown above, displaying image may get disturbed.

[Note] Do not keep the interface signal high-impedance or unusual signal when power is on.

Vcc-dip conditions

- 1) $2.5\text{ V} \leq V_{cc} < 3.0\text{ V}$

$$t_d \leq 10\text{ ms}$$

Under above condition, the display image should return to an appropriate figure after Vcc voltage recovers.

- 2) $V_{cc} < 2.5\text{ V}$

Vcc-dip conditions should also follow the On-off conditions for supply voltage

[Note 2] Typical current situation :

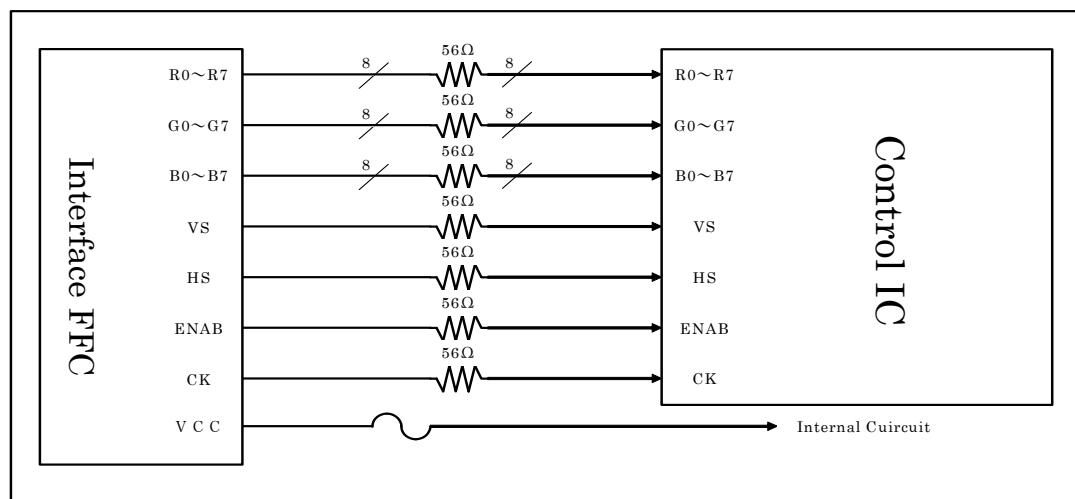

$$V_{cc} = +3.3\text{ V}, f_{VSYNC} = 60\text{ Hz}$$

Measuring pattern: GS0-GS240 Vertical gray scale.

6-2. Backlight driving

The backlight system is edge-lighting type with 24 White-LED(White Light Emitting Diode).

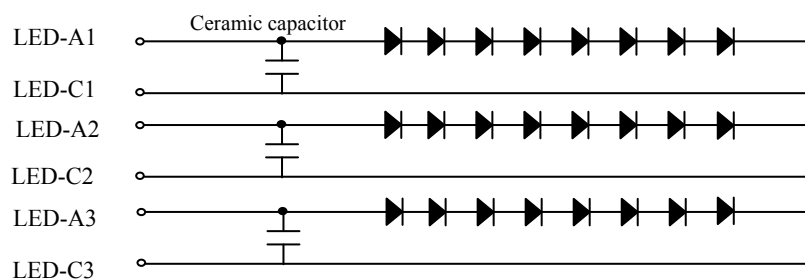

The characteristics of White-LED are shown in the following table. (Ta=25 °C)

Parameter	Symbol	Min.	Typ.	Max.	Unit	Remark
LED voltage	V_L	—	25.6	28	V	$I_L=20\text{mA}/1\text{string}$
LED current range	I_L		20	25	mA

LED power consumption	W_L	—	1.54	—	W	[Note 2]
LED life time	L_L	10000	—	—	Hour	[Note 3]

[Note 1] The LED backlight is composed by 3 strings from which 8 LED is connected with the series.

The figure below shows the circuit chart.

In each string, there is a ceramic capacitor for the electrostatic protection.

[Note 2] Calculated value for reference ($I_L \times V_L \times 3\text{pairs}$)

[Note 3] LED life time is defined as the time when Brightness becomes 50 % of the original value.
under the condition of Ta = 25°C and $I_L = 20\text{ mA}$, and continuous lighting.

※ The measurement shall be executed 30 minutes after lighting at rating. Condition : (I_f=20mA)
The optical characteristics shall be measured in a dark room or equivalent.

[Note 1] Measuring Viewing Angle Range

[Note 2] Other Measurements

[Note 3] Definitions of viewing angle range:

[Note 4] Definition of contrast ratio:

The contrast ratio is defined as the following.

$$\text{Contrast Ratio (CR)} = \frac{\text{Luminance (brightness) with all pixels white}}{\text{Luminance (brightness) with all pixels black}}$$

[Note 5] Definition of response time:

The response time is defined as the following figure and shall be measured by switching the input signal for "black" and "white".

[Note 6] This shall be measured at center of the screen.

11. Display Quality

The display quality of the color TFT-LCD module shall be in compliance with the Incoming Inspection Standard.

12. Handling Precautions

- a) Be sure to turn off the power supply when inserting or disconnecting the cable.

Please insert for too much stress not to join FFC/FPC in case of insertion of FFC/FPC.

- b) Be sure to design the cabinet so that the module can be installed without any extra stress such as warp or twist.
- c) Since the touch panel surface is easily damaged, pay attention not to scratch it.
- d) Wipe off water drop immediately. Long contact with water may cause discoloration or spots.
- e) When the panel surface is soiled, wipe it with absorbent cotton or other soft cloth.
- f) Since the panel is made of glass, it may break or crack if dropped or bumped on hard surface. Handle with care.
- g) Since CMOS LSI is used in this module, take care of static electricity and injure the human earth when handling.
Observe all other precautionary requirements in handling components.
- h) This module has its circuitry PCBs on the rear side and should be handled carefully in order not to be stressed.
- i) Protect sheet(Laminate film) is attached to the module surface to prevent it from being scratched. Peel the sheet off slowly just before the use with strict attention to electrostatic charges. Ionized air shall be blown over during the action. Blow off the 'dust' on the polarizer by using an ionized nitrogen gun, etc. Working under the following environments is desirable.
- All workers wear conductive shoes, conductive clothes, conductive fingerstalls and grounding belts without fail.
 - Use Ionized blower for electrostatic removal, and peel of the protect sheet with a constant speed. (Peeling of it at over 2 seconds)
- j) Do not expose the LCD module to a direct sunlight, for a long period of time to protect the module from the ultra violet ray.
- k) Connect metal frame to GND for stabilizing against EMI and external noise.
- l) When handling LCD modules and assembling them into cabinets, please be noted that long-term storage in the environment of oxidization or deoxidization gas and the use of such materials as reagent, solvent, adhesive, resin, etc. which generate these gasses, may cause corrosion and discoloration of the LCD modules.
- m) Liquid crystal contained in the panel may leak if the LCD is broken. Rinse it as soon as possible if it gets inside your eye or mouth by mistake.
- n) Disassembling the module can cause permanent damage and should be strictly avoided.
Please don't remove the fixed tape, insulating tape etc that was pasted on the original module.
- o) Be careful when using it for long time with fixed pattern display as it may cause afterimage.
(Please use a screen saver etc., in order to avoid an afterimage.)
- p) Adjusting volume have been set optimally before shipment, so do not change any adjusted value. If adjusted value is changed, the specification may not be satisfied.
- q) If a minute particle enters in the module and adheres to an optical material, it may cause display non-uniformity issue, etc. Therefore, fine-pitch filters have to be installed to cooling and inhalation hole if you intend to install a fan.
- r) Epoxy resin (amine series curing agent), silicone adhesive material (dealcoholization series and oxime series), tray forming agent (azo compound) etc, in the cabinet or the packing materials may induce abnormal display with polarizer film deterioration regardless of contact or noncontact to polarizer film.

Be sure to confirm the component of them.

- s) Do not use polychloroprene. If you use it, there is some possibility of generating Cl_2 gas that influences the reliability of the connection between LCD panel and driver IC.
- t) Don't give stress on the surface of the touch panel continuously. It causes unevenness (in such cases as the Newton's Ring) in the touch panel surface.

13. Design guidances for touch panel (T/P)

1) Design the housing so that touch panel is not pressed by housing strain—in case of placing hand to the housing, for example.

Keep the gap (over 0.5mm) between the housing-bezel-edge and T/P surface, to avoid the contact. (See the figure below)

2) Be careful not to press down the touch panel with the protrusion of housing bezel, as it may cause malfunction in the touch panel.

3) We recommend inserting cushion material between the housing bezel and the T/P.

Attach cushion material to the housing bezel side; avoid bonding it to the touch panel.

Place the cushion material within “Recommended Gasket Area”(See Fig.3). Consider assembling tolerances so that no stress is applied onto the prohibition area.

4) Do not use an adhesive-tape bonding T/P and the housing bezel.

5) Top layer (PET Film) dimension may change with environmental temperature and humidity.

Please avoid a stress from housing bezel to top layer, because it may cause “waving”.

6) There is a possibility that the electrode is left in the side edge of T/P.

Please design to keep this area insulate from the perimeter to prevent mis-operation and so on.

7) Make sure the exposed area of the touch panel will be within the key area. The housing edge may cause the pen to scribe across the same spot repeatedly. Pressing prohibition area may cause the damaged of the conductive layer and a malfunction in detecting position.

8) The touch panel glass substrate is not chamfered.

Do not press the flexible printed circuit (FPC) against the glass edge.

14. Packing form

Piling number of cartons	Max.8
Package quantity in one carton	40pcs
Carton size	380 (W) × 575(D) × 225(H) mm
Total mass of one carton filled with full modules	11.4 kg
Packing form	Fig.2

15. Reliability Test Items

No.	Test item	Conditions
1	High temperature operation test	Ta = +50°C 240h
2	Low temperature operation test	Ta = -20°C 240h
3	High temperature storage test	Ta = +70°C 240h
4	Low temperature storage test	Ta = -30°C 240h
5	High temperature & high humidity operation test	Ta = +40°C ; 95 %RH 240h (No condensation)
6	Vibration test (non- operating)	Frequency range: 10 to 55Hz Sweep: 1.5mm Sweep time: 1minute Test period: 2 hours for each direction of X,Y,Z
7	Shock test	Direction: ±X, ±Y, ±Z, Time: 3 times for each direction. Impact value: 980m/s ² , Action time 6ms

[Result Evaluation Criteria]

Under the display quality test conditions with normal operation state, these shall be no change which may affect practical display function. (normal operation state : Temperature:15~35°C, Humidity:45~75%, Atmospheric pressure:86~106kpa)

16. Label

1) Module label:

Notation: ①Model No. ②Serial No.

Details of Serial No

(Example)

9 4 0 0 0 0 0 1

Production year(9~)

Revision Code(None, A,B, . . .)

Production Month(1~9,X,Y,Z)

Serial No(000001~)

[Note] Production year : 9(2009)、0(2010)、1(2011)、

Production Month : 1(Jan)、2(Feb)、 . . . 、9(Sep)、X(Oct)、Y(Nov)、Z(Dec)

2) Packing bar code label

Notation/ Bar code: ①Model No. ②Date ③Quantity

社内品番: (4S)LQ070Y3DG3B	← ①
Bar code(①)	
Lot No. : (1T)2009. 04. 01	← ②

※R.C. (RoHS Compliance) means these parts have corresponded with the RoHS directive.

17. Storage conditions

<Environmental condition range of storage temperature and humidity>

Temperature 0 to 40 degrees Celsius

Relative humidity 70% and below

Direct sun light

Please keep the product in a dark room or cover the product to protect from direct sun light.

Atmospheric condition

Please refrain from keeping the product with possible corrosive gas or volatile flux.

Prevention of dew

* Please store the product carton either on a wooden pallet or a stand / rak to prevent dew.

Do not place directly on the floor. In addition, to obtain moderate ventilation in between the pallet's top and bottom surfaces, pile the cartons up in a single direction and in order.

* Please place the product cartons away from the strage wall.

* Please maintain the storage area with an appropriate ventilation. It is recommendable to furnish the storage area with equipments such as ventilation systems.

* Please maintain the ambient temperature within the range of natural environmental fluctuation.
