## Si545 Data Sheet

### Ultra Low Jitter Any-Frequency XO (80 fs), 0.2 to 1500 MHz

The Si545 Ultra Series™ oscillator utilizes Silicon Laboratories' advanced 4<sup>th</sup> generation DSPLL® technology to provide an ultra-low jitter, low phase noise clock at any output frequency. The device is factory-programmed to any frequency from 0.2 to 1500 MHz with <1 ppb resolution and maintains exceptionally low jitter for both integer and fractional frequencies across its operating range. The Si545 offers excellent reliability and frequency stability as well as guaranteed aging performance. On-chip power supply filtering provides industry-leading power supply noise rejection, simplifying the task of generating low jitter clocks in noisy systems that use switched-mode power supplies. Offered in industry-standard footprints, the Si545 has a dramatically simplified supply chain that enables Silicon Labs to ship custom frequency samples 1-2 weeks after receipt of order. Unlike a traditional XO, where a different crystal is required for each output frequency, the Si545 uses one simple crystal and a DSPLL IC-based approach to provide the desired output frequency. This process also guarantees 100% electrical testing of every device. The Si545 is factory-configurable for a wide variety of user specifications, including frequency, output format, and OE pin location/polarity. Specific configurations are factory-programmed at time of shipment, eliminating the long lead times associated with custom oscillators.

## 1. Ordering Guide

The Si545 XO supports a variety of options including frequency, output format, and OE pin location/polarity, as shown in the chart below. Specific device configurations are programmed into the part at time of shipment, and samples are available in 1-2 weeks. Silicon Laboratories provides an online part number configuration utility to simplify this process. Refer to [www.silabs.com/oscillators](http://www.silabs.com/oscillators) to access this tool and for further ordering instructions.

**Notes:** The following notes and stencil design are shared as recommendations only. A customer or user may find it necessary to use different parameters and fine-tune their SMT process as required for their application and tooling.

#### General

1. All dimensions shown are in millimeters (mm) unless otherwise noted.
2. Dimensioning and Tolerancing is per the ANSI Y14.5M-1994 specification.
3. This Land Pattern Design is based on the IPC-7351 guidelines.
4. All dimensions shown are at Maximum Material Condition (MMC). Least Material Condition (LMC) is calculated based on a Fabrication Allowance of 0.05 mm.

#### Solder Mask Design

1. All metal pads are to be non-solder mask defined (NSMD). Clearance between the solder mask and the metal pad is to be 60 µm minimum, all the way around the pad.

#### Stencil Design

1. A stainless steel, laser-cut and electro-polished stencil with trapezoidal walls should be used to assure good solder paste release.
2. The stencil thickness should be 0.125 mm (5 mils).
3. The ratio of stencil aperture to land pad size should be 0.8:1 for the pads.

#### Card Assembly

1. A No-Clean, Type-3 solder paste is recommended.
2. The recommended card reflow profile is per the JEDEC/IPC J-STD-020 specification for Small Body Components.

7. Top Marking (5x7 and 3.2x5 Packages)

The figure below illustrates the mark specification for the Si545 5x7 and 3.2x5 package sizes. The table below lists the line information.

Figure 7.1. Mark Specification

Table 7.1. Si545 Top Mark Description

Line	Position	Description
1	1–8	"Si545", xxx = Ordering Option 1, Option 2, Option 3 (e.g. Si545AAA)
2	1–7	Frequency Code (e.g. 100M000 or 6-digit custom code as described in the Ordering Guide)
3	Trace Code	
	Position 1	Pin 1 orientation mark (dot)
	Position 2	Product Revision (B)
	Position 3–5	Tiny Trace Code (3 alphanumeric characters per assembly release instructions)
	Position 6–7	Year (last two digits of the year), to be assigned by assembly site (ex: 2017 = 17)
	Position 8–9	Calendar Work Week number (1–53), to be assigned by assembly site

## 8. Top Marking (2.5x3.2 Package)

The figure below illustrates the mark specification for the Si545 2.5x3.2 package sizes. The table below lists the line information.

**Figure 8.1. Mark Specification**

**Table 8.1. Si545 Top Mark Description**

Line	Position	Description
1	1–6	E = Si545, CCCCC = Custom Mark Code
2	<b>Trace Code</b>	
	1–6	Six-digit trace code per assembly release instructions
3	Position 1	Pin 1 orientation mark (dot)
	Position 2–3	Year (last two digits of the year), to be assigned by assembly site (exp: 2017 = 17)
	Position 4–5	Calendar Work Week number (1–53), to be assigned by assembly site
