

### GLOBAL PERFORMANCE SWITCHERS

#### FEATURES:

- 115 Watts of continuous power with forced air
- Power factor corrected
- 74-81% efficiency
- Small package 3.3" x 5.25" x 1.5" inches
- Power fail warning, remote sense
- Optional cover with cooling fan
- Medical Approval to UL2601-1, CSA-C22.2 No. 601.1, EN60601-1
- RoHS Compliant Model Available (G suffix)

**CONDOR**  
DC Power Supplies

#### SPECIFICATIONS

| <b>Ac Input</b><br>85-264 Vac, 47-63 Hz single phase                                                                                                                                                                                                                                                                                                  | <b>Transient Response</b><br>Main Output 500 $\mu$ s typical response time for return to within 0.5% of final value for a 50% load step change, $\Delta i/\Delta t < 0.2$ A/ $\mu$ s. Maximum voltage deviation is 3.5%.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                    |                  |                     |                              |                  |                                     |                         |                        |                        |                          |                      |                                    |                          |                     |                             |                  |                                |                                                 |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|------------------|---------------------|------------------------------|------------------|-------------------------------------|-------------------------|------------------------|------------------------|--------------------------|----------------------|------------------------------------|--------------------------|---------------------|-----------------------------|------------------|--------------------------------|-------------------------------------------------|
| <b>Output Power</b><br>Continuous rating is 80 W with unrestricted natural convection, or 115 W with forced convection. All models capable of 110% of rated power for 60 sec., 10% duty cycle maximum.                                                                                                                                                | <b>Minimum Load</b><br>No minimum load required to maintain output specifications. An abrupt change in output current from > 90% to < 2% load may cause a false triggering of the power fail signal.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                    |                  |                     |                              |                  |                                     |                         |                        |                        |                          |                      |                                    |                          |                     |                             |                  |                                |                                                 |
| <b>Input Current</b><br>Maximum input current at 90 Vac, 60 Hz with full rated load is 1.7 A. Input current harmonic content meets the requirements of IEC1000-3-2 for all load conditions at 230 Vac input. Active input circuitry provides high power factor of .96 min, .99 typical.                                                               | <b>Voltage Adjustment</b><br>Main output $\pm 5\%$ .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                    |                  |                     |                              |                  |                                     |                         |                        |                        |                          |                      |                                    |                          |                     |                             |                  |                                |                                                 |
| <b>Inrush Current</b><br>Inrush 240 Vac is less than 37 A, averaged over the first ac halfcycle under cold start conditions. Limiting provided by internal thermistors.                                                                                                                                                                               | <b>Temperature Coefficient</b><br>0.03%/°C typical on all outputs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                    |                  |                     |                              |                  |                                     |                         |                        |                        |                          |                      |                                    |                          |                     |                             |                  |                                |                                                 |
| <b>Holdup Time</b><br>25 ms minimum from loss of ac input at full load.                                                                                                                                                                                                                                                                               | <b>Thermal Shutdown</b><br>Provided as a standard feature. Designed to protect unit from prolonged over temperature.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                    |                  |                     |                              |                  |                                     |                         |                        |                        |                          |                      |                                    |                          |                     |                             |                  |                                |                                                 |
| <b>Power Fail</b><br>TTL / CMOS compatible output goes low (<0.5 V) 8 ms before output voltage drops more than 4% below nominal voltage upon loss of ac power. The signal is factory set to trip before there is insufficient power stored in the primary to sustain the output. Signal can sink 1.6 mA or source 400 $\mu$ A at 2.7 V (Fan-out = 1). | <b>Fan Output</b><br>An additional 12 Vdc (nominal 10.5 V), 100 mA output suitable for powering a dc fan is included in all models. The fan output is referenced to +out. Due to high pk-pk noise and low regulation, it is not recommended that this output be used for any other purpose.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                    |                  |                     |                              |                  |                                     |                         |                        |                        |                          |                      |                                    |                          |                     |                             |                  |                                |                                                 |
| <b>Efficiency</b><br>74 to 81% depending upon model                                                                                                                                                                                                                                                                                                   | <b>Input Protection</b><br>Internal ac fuse provided on all models. Fuse does not blow on overload or short circuit -- fuse blows only if a catastrophic failure occurs in the unit.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                    |                  |                     |                              |                  |                                     |                         |                        |                        |                          |                      |                                    |                          |                     |                             |                  |                                |                                                 |
| <b>DC Output Specification</b><br>Total regulation is the maximum deviation from the nominal voltage for all steady state loading conditions. **Notes:**

\* Add "G" suffix to part number for RoHS compliant model.

A. Maximum continuous current rating for unrestricted convection cooling.

B. Maximum continuous current rating with 150 LFM air or cover option.

C. Add "-C" after voltage in model number for cover with fan option.

A. Units should be allowed to warm up/operate under non-condensing conditions before application of power. Derate output current and total output power by 2.5% per °C above 50°C. For operation in a confined space, moving air may be required. Under all conditions, the cooling vs. load profile should be such that chassis temperatures do not exceed 90°C for extended periods.

B. Shock testing—half-sinusoidal, 10 ± 3 ms duration, ± direction, 3 orthogonal axes, total 6 shocks.

C. Random vibration—10 to 2000Hz, 6dB/octave roll-off from 350 to 2000Hz, 3 orthogonal axes. Tested for 10 min./axis operating and 1 hr./axis non-operating.
