

## Common mode filter with ESD protection for USB 2.0 and MIPI D-PHY/MDDI interface

Datasheet - production data

## Applications

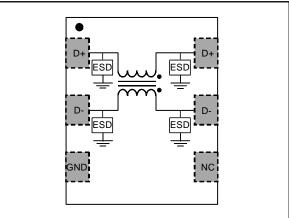

- Mobile phones
- Notebook, laptop
- Portable devices
- PND

## Description

The device is a highly integrated common mode filter designed to suppress EMI/RFI common mode noise on high speed differential serial buses like MIPI D-PHY, MDDI or USB 2.0.

Also it can protect and filter one differential lane.

Figure 1: Pin configuration

## Features

- High common mode attenuation:
  - -34 dB at 900 MHz
  - -20 dB between 800 MHz and 2.2 GHz
- Large bandwidth: 1.7 GHz
- Very low PCB space consumption
- Thin package: 0.55 mm max.
- RoHS package
- High reduction of parasitic elements through integration

## Complies with the following standards

- IEC 61000-4-2 (exceeds level 4)
  - ±15 kV (air discharge)
  - ±8 kV (contact discharge)

DocID17815 Rev 3

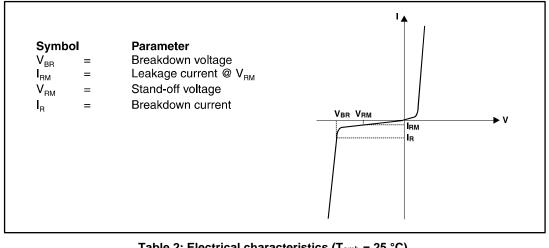

This is information on a product in full production.

# 1 Characteristics

| Symbol           | Parameter                          | Value             | Unit |    |  |
|------------------|------------------------------------|-------------------|------|----|--|
|                  |                                    | IEC 61000-4-2:    |      |    |  |
| Vpp              | Peak pulse voltage                 | Contact discharge | 8    | kV |  |
|                  |                                    | Air discharge     | 20   |    |  |
| IDC              | Maximum DC current                 | 200               | mA   |    |  |
| Tj               | Maximum junction temperature range | -55 to +125       |      |    |  |
| T <sub>stg</sub> | Storage temperature range          | -55 to +150       | °C   |    |  |
| TL               | Maximum temperature for soldering  | 260               |      |    |  |

## Table 1: Absolute maximum ratings (Tamb = 25 °C)

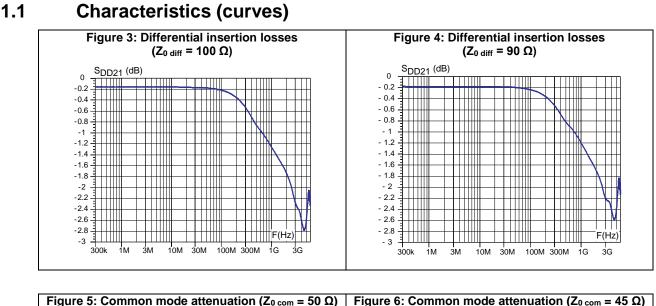

### Figure 2: Electrical characteristics (definitions)

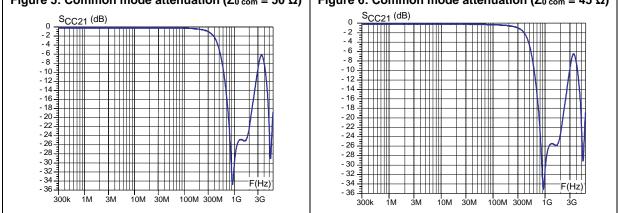

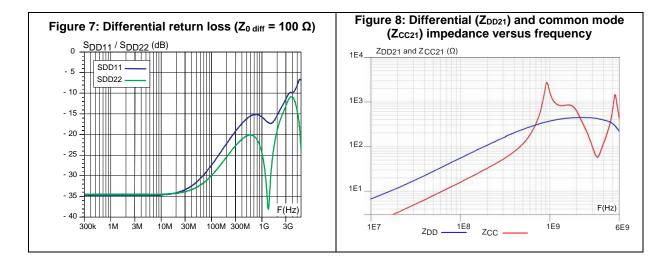

| Symbol          | Test condition                   | Min. | Тур. | Max. | Unit |
|-----------------|----------------------------------|------|------|------|------|
| VBR             | I <sub>R</sub> = 1 mA            | 6    |      |      | V    |
| I <sub>RM</sub> | V <sub>RM</sub> = 1.5 V per line |      |      | 100  | nA   |
| RDC             | DC serial resistance             |      | 1.8  | 2.5  | Ω    |

Compliant with USB 2.0 high speed sync field test (150 mV diff).

## **3** Package information

In order to meet environmental requirements, ST offers these devices in different grades of ECOPACK<sup>®</sup> packages, depending on their level of environmental compliance. ECOPACK<sup>®</sup> specifications, grade definitions and product status are available at: *www.st.com*. ECOPACK<sup>®</sup> is an ST trademark.

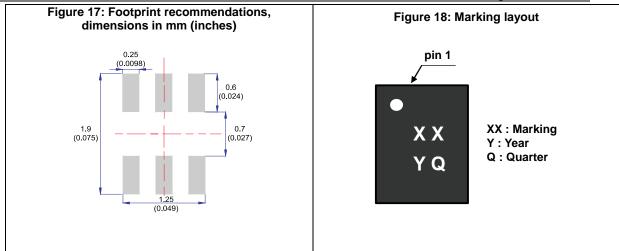

## 3.1 QFN-6L package information

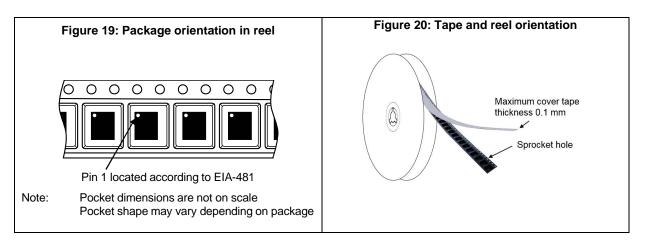

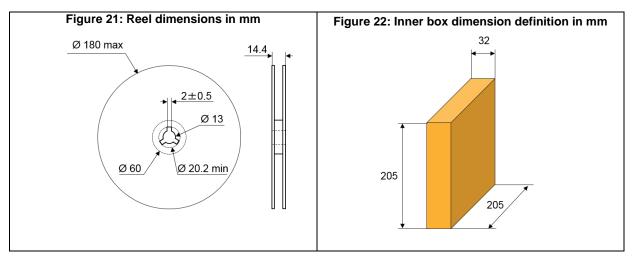

|               | Dimensions |             |      |       |        |        |  |

| W    | 7.7         | 8    | 8.3  |  |  |  |  |

#### **Recommendation on PCB assembly** 4

#### Stencil opening design 4.1

- 1. General recommendation on stencil opening design
  - Stencil opening dimensions: L (Length), W (Width), T (Thickness). a.
- 2. General design rule
  - Stencil thickness (T) = 75 ~ 125  $\mu$ m Aspect ratio =  $\frac{W}{T} \ge 1.5$ a.
  - b.
  - Aspect area =  $\frac{L \times W}{2T(L+W)} \ge 0.66$ c.
- Reference design 3.
  - Stencil opening thickness: 100 µm a.
  - Stencil opening for leads: Opening to footprint ratio is 90%. b.

DocID17815 Rev 3

## 4.2 Solder paste

- 1. Halide-free flux qualification ROL0 according to ANSI/J-STD-004.
- 2. "No clean" solder paste is recommended.
- 3. Offers a high tack force to resist component movement during high speed.
- 4. Solder paste with fine particles: powder particle size is 20-45 μm.

## 4.3 Placement

- 1. Manual positioning is not recommended.
- 2. It is recommended to use the lead recognition capabilities of the placement system, not the outline centering
- 3. Standard tolerance of  $\pm 0.05$  mm is recommended.
- 4. 3.5 N placement force is recommended. Too much placement force can lead to squeezed out solder paste and cause solder joints to short. Too low placement force can lead to insufficient contact between package and solder paste that could cause open solder joints or badly centered packages.
- 5. To improve the package placement accuracy, a bottom side optical control should be performed with a high resolution tool.
- 6. For assembly, a perfect supporting of the PCB (all the more on flexible PCB) is recommended during solder paste printing, pick and place and reflow soldering by using optimized tools.

## 4.4 PCB design preference

- 1. To control the solder paste amount, the closed via is recommended instead of open vias.
- 2. The position of tracks and open vias in the solder area should be well balanced. A symmetrical layout is recommended, to avoid any tilt phenomena caused by asymmetrical solder paste due to solder flow away.

## 4.5 Layout recommendation

Connection to PCB GND must be as short as possible to ensure ESD remaining voltage and  $S_{\mbox{\scriptsize CC21}}$  performance.

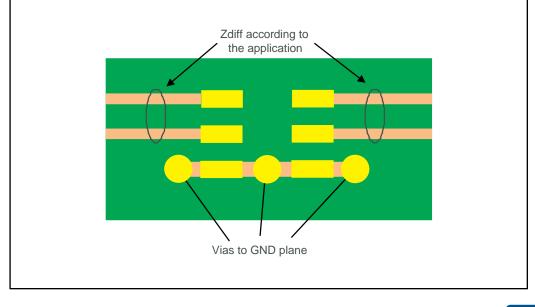

Figure 26: Layout recommendation

DocID17815 Rev 3

## 4.6 Reflow profile

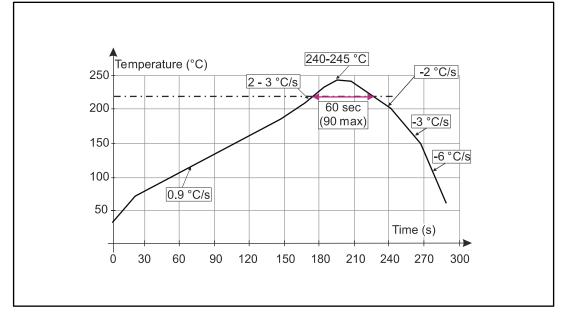

Figure 27: ST ECOPACK<sup>®</sup> recommended soldering reflow profile for PCB mounting

-

Minimize air convection currents in the reflow oven to avoid component movement. Maximum soldering profile corresponds to the latest IPC/JEDEC J-STD-020.

# 5 Ordering information
