1 Description

The [STM32MP157D-DK1](#) and [STM32MP157F-DK2](#) Discovery kits leverage the capabilities of the increased-frequency 800 MHz microprocessors in the STM32MP1 Series to allow users easily develop applications using STM32 MPU OpenSTLinux Distribution software for the main processor and STM32CubeMP1 software for the co-processor.

They include an ST-LINK embedded debug tool, LEDs, push-buttons, one Ethernet 1-Gbps connector, one USB Type-C® OTG connector, four USB Type-A Host connectors, one HDMI® transceiver, one stereo headset jack with analog microphone, and one microSD™ connector.

To expand the functionality of the [STM32MP157D-DK1](#) and [STM32MP157F-DK2](#) Discovery kits, two GPIO expansion connectors are also available for ARDUINO® and Raspberry Pi® shields.

Additionally, the [STM32MP157F-DK2](#) Discovery kit features an LCD display with a touch panel, and Wi-Fi® and Bluetooth® Low Energy capability.

2 Ordering information

To order an STM32MP157 Discovery kit, refer to [Table 1](#). For a detailed description of each board, refer to its user manual on the product web page. Additional information is available from the datasheet and reference manual of the target STM32.

Table 1. List of available products

Order code	Board reference	User manual	Target STM32	Differentiating feature
STM32MP157D-DK1	• MB1272	UM2637	STM32MP157DAC1	• Basic security
STM32MP157F-DK2	• MB1272 • MB1407 ⁽¹⁾		STM32MP157FAC1	• Secure Boot and cryptography • LCD • Wi-Fi® • Bluetooth® Low Energy

2.1 Product marking

The sticker located on the top or bottom side of the PCB board shows the information about product identification such as board reference, revision, and serial number.

The first identification line has the following format: “MBxxxx-Variant-yyy”, where “MBxxxx” is the board reference, “Variant” (optional) identifies the mounting variant when several exist, “y” is the PCB revision and “zz” is the assembly revision: for example B01.

The second identification line is the board serial number used for traceability.

Evaluation tools marked as “ES” or “E” are not yet qualified and therefore not ready to be used as reference design or in production. Any consequences deriving from such usage will not be at ST charge. In no event, ST will be liable for any customer usage of these engineering sample tools as reference designs or in production.

“E” or “ES” marking examples of location:

- On the targeted STM32 that is soldered on the board (For an illustration of STM32 marking, refer to the STM32 datasheet “Package information” paragraph at the www.st.com website).
- Next to the evaluation tool ordering part number that is stuck or silk-screen printed on the board.

2.2 Codification

The meaning of the codification is explained in [Table 2](#).
