

LOW THRESHOLD OCTAL HIGH SIDE DRIVER

General Features

Type	$R_{DS(on)}$	I_{out}	V_{CC}
VN808CM	160m Ω	0.7A	45V

- CMOS COMPATIBLE INPUT
- JUNCTION OVER-TEMPERATURE PROTECTION
- CASE OVER-TEMPERATURE PROTECTION FOR THERMAL INDEPENDENCE OF THE CHANNELS
- CURRENT LIMITATION
- SHORTED LOAD PROTECTIONS
- UNDERVOLTAGE SHUTDOWN
- PROTECTION AGAINST LOSS OF GROUND
- VERY LOW STAND-BY CURRENT
- COMPLIANCE TO 61000-4-4 IEC TEST UP TO 4KV

It can be driven by using a 3.3V logic supply. Active current limitation, combined with thermal shutdown and automatic restart, protect the device against overload. In overload condition, the channel turns OFF, then back ON automatically so as to maintain junction temperature between T_{TSD} and T_R . If this condition makes the case temperature reach T_{CSD} , the overloaded channel is turned OFF and will restart only when the case temperature has decreased down to T_{CR} (see Figures 6-7). Channels that are not overloaded continue to operate normally.

Description

The VN808CM is a monolithic device designed with STMicroelectronics VIPower MOS-3 Technology, and is intended for driving any kind of load with one side connected to ground.

The device automatically turns OFF when the Ground pin is disconnected. This device is especially suitable for industrial applications which conform to IEC 61131 (Programmable Controllers International Standard)S

Mechanical Data

In order to meet environmental requirements, ST offers these devices in ECOPACK[®] packages. These packages have a Lead-free second level interconnect . The category of second level interconnect is marked on the package and on the inner box label, in compliance with JEDEC Standard JESD97. The maximum ratings related to soldering conditions are also marked on the inner box label. ECOPACK is an ST trademark. ECOPACK specifications are available at: www.st.com
