Description

This 10A, 1200V SiC diode is an ultra-high performance power Schottky diode. It is manufactured using a silicon carbide substrate. The wide band gap material allows the design of a Schottky diode structure with a 1200 V rating. Due to the Schottky construction, no recovery is shown at turn-off and ringing patterns are negligible. The minimal capacitive turn-off behavior is independent of temperature

Housed in DPAK HV, this diode is perfectly suited for a usage in PFC applications, in charging station, servers, DC/DC modules, easing the compliance to IEC-60664-1.

The [STPSC10H12B2-TR](#) will boost performances in hard switching conditions. Its high forward surge capability ensures good robustness during transient phases.
