

# **PANTA FIX JUMPER**

### **TECHNOLOGY**

PANTA FIX JUMPERS are highly flexible flat conductor connectors. Solid round conductors ensure fast and safe assembly. The PANTA round-flat-round technology combines both: The copper conductors are rolled flat to a defined geometry in the insulating area. Ensuring the highest standards of vibration and bending resistance. The smooth notch-free transition from round to flat guarantees fracture-safe connection points.

### **BENEFITS**

High vibration and bending resistance

Reliable and fracture-safe connection

Very easy handling

Immediately ready for installation

Economizes working time and assembly costs

Minimum space required

High productivity by simultaneous soldering of all connection points in the solder bath

Wiring errors are avoided

Choice of various termination styles

Allows combination with male connectors

High-quality insulation materials (-40°C to +125 °C)

Different pitches within one jumper available (MIX)

Short insulation lengths also available as wire jumpers

(without the flat rolled copper conductor end)

### **CHARACTERISTICS**

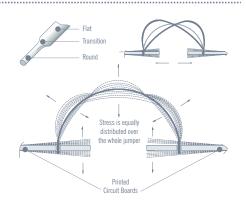

High vibration and bending resistance

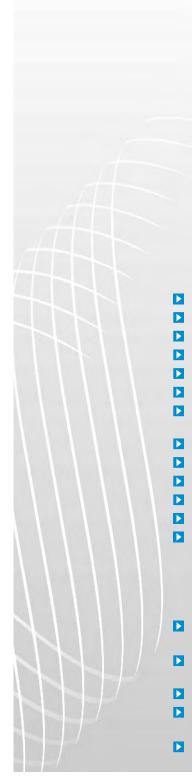

Smooth notch-free transition from flat to round

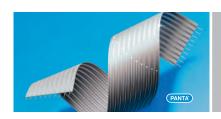

Fracture-safe connection point

Compensation of intrinsic vibrations

Avoidance of vibration resonances
