## Levity Series

**Part No:**  
ALPDF254.07.0100C

## Description

Active L-Band Dual Feed Patch Antenna  
With 100mm of 1.37mm Cable and I-PEX MHFI U.FL Connector

## Features:

Active L-Band Only Patch with Dual pin configuration  
Covering Bands:  
L-Band from 1525-1559MHz  
Low Axial Ratio  
Cable: 100mm 1.37mm Cable  
Connector: I-PEX MHFI U.FL  
CE Certified for RoHS and RED  
RoHS & Reach Compliant

## 1. Introduction

The Taoglas Levity Series ALPDF254 is an active L-Band patch antenna for use on the L-Band spectrum positioning correction services. The antenna exhibits excellent gain and good radiation pattern stability leading to a reliable performance, enabling a high precision GNSS receiver to reach accuracies down to centimeter level. Satellite L-band communication systems allows GNSS correction service providers to broadcast a variety of services on specific channels, satellites, and the ALPDF254 has been expertly designed to exhibit the high efficiency required when using L-Band receivers.

Typical applications include:

- UAVs and Robotics
- Autonomous Vehicles
- Precision and Smart Agriculture

The ALPDF254 includes LNAs to amplify the L-Band signal, and front-end SAW filters to reduce out of band noise, such as from nearby cellular transceivers. It offers better protection from nearby radiated power surges and greatly reduces the probability of damaging your receiver from nearby transmissions. The ALPDF254 has a single cable feed as the two pin feeds are combined with a hybrid coupler to get the best possible axial ratio for L-Band applications.

The cable and connector are fully customizable, subject to NRE and MOQ. For further information please contact your regional Taoglas customer support team.
