

SPECIFICATION

Part No. : **PC240.09.0300K**

Product Name : Embedded T-Bar 433MHz
Adhesive/Screw Mounted Helical Dipole
with 0.3M RG316 MMCX(M)RA

Features :

- Omni-Directional
- 96mm x 40mm x 3mm
- Integrated LC tank Balun to prevent influence of cable routing and cable length
- -1dBi Peak Gain @ 433MHz
- 48% high efficiency
- 300mm RG316 Coaxial Cable
- MMCX(M) Right Angle Connector
- Low profile – only 3mm in thickness

RoHS Compliant

1. Introduction

The PC240.09.0300K is a 433MHz embedded omni-directional adhesive / screw mounted, linear polarised, dipole antenna with high efficiency at only 96mm in length.

The antenna was specifically designed for use in wireless alarm devices. It operates in license-free ISM band, making the PC240.09.0300K a suitable antenna in systems such as home security & alarm, home automation, metering, remote control, industrial control, and other 433MHz applications.

Most low frequency antennas detune inside enclosures when the cable is moved to new orientations. In order to mitigate the influence of cable routing direction while installing, the PC240.09.0300K uses a LC tank balun circuit. The LC tank balun circuit stabilizes the electrical characteristics when cable length changes. Please refer to Application Note (Section 7) for more details.

The PC240.09.0300K is designed as a helical dipole structure, which can significantly shorten the length while maintaining high efficiency. Users can easily attach the antenna on their device housing via the 3M adhesive, without worrying about their housing detuning the antenna as it has been tuned on a 2mm thick ABS board, which is typical enclosure thickness and material for electronic devices. It also has four thru holes that users can fix the antenna with screws.

With the balun circuit and helical dipole design, the PC240.09.0300K is truly a miniature 433 MHz PCB antenna, which can provide worry-free cable routing during installation.

2. Specification

ELECTRICAL		
Application Band		ISM
Operation Frequency (MHz)		433
Cable length (M)		0.3
On 2mm thickness ABS Base	Average Gain (dB)	-3.14
	Efficiency (%)	48.82
	Peak Gain	-0.97
VSWR		< 2:1
Return Loss (dB)		< -10
Polarization		Linear
Impedance		50 Ohms

MECHANICAL	
Dimension (mm)	Height = 3 mm, Length = 96 mm, Width = 40 mm
Cable length	300mm RG316 – Fully Customizable
Connector	MMCX(M) RA – Fully Customizable
Material	Composite
Weight (g)	18

ENVIRONMENTAL RATINGS	
Temperature Range	-40°C to +85°C
Thermal Shock	100 cycles -40°C to +85°C
Humidity	Non-condensing 65°C 95% RH
Cable Pulling Force	18.2kgF

3. Antenna Characteristics

3.1 Testing Setup

PC240 antenna was tested with R&S ZNB-8 network analyzer.

On 2mm thick ABS base

3.2 Return Loss

3.3 Average Gain

3.4 Efficiency

3.5 Peak Gain

4. Antenna Radiation Patterns

4.1 Antenna Setup

The antenna radiation pattern measurement setup is shown below.

4.2 Antenna Radiation Patterns

2D Patterns

YZ Plane

XY Plane

XZ Plane

3D Patterns

Azimuth = 117.6
Elevation = -38.2
Roll = -50.2

5. Drawing

6. Packaging (unit: mm)

1 Piece PC240.09.0300K per small PE bag
 Dimensions - 140*130mm
 Weight - 20g

25 small PE bgs per large PE bag
 Dimensions - 465*280mm
 Weight - 0.50Kg

25 large PE bags per cartons
 250 Pieces per carton
 Carton Dimensions - 260*320*240
 Weight - 12.5 Kg

Pallet Dimensions 1100*1100*1330mm
 60 Cartons per Pallet
 12 Cartons per layer
 5 Layers

7. Application Note

7.1 PC240 antenna cable routing effects

Cable Routing

7.2 PC240 with long cable effects

PC240 with extra 150cm cable

Through these two experiments, the LC tank Balun has isolated cable effects to antenna resonance.

8. Installation Recommendations

PC240 antenna is a resonant arm meandered non-standard dipole novel antenna design. However, it still keeps the same radiation characteristics as standard dipole antennas. It has an omni-directional radiation pattern in the H-Plane(2D YZ Plane in the spec). The installation recommendation of this antenna is mounting the antenna internally on the side walls of the device, with one of the arms of the T pointing downwards

For either of the antenna installations shown above, the antenna will exhibit the radiation pattern as shown below.

Orange means much higher antenna gains, Green means the weakest antenna gains. So the correct application of this antenna is to let the antenna edges as below face the sky and Earth. Then the antenna can have omni-directional radiation patterns that are horizontal to the Earth.
