1. Introduction

This ceramic GPS patch antenna is based on smart ***XtremeGain™*** technology. It is mounted via SMT process and has been tuned as the optimal solution for the ublox C16-G25Q GSM/GPS Integrated reference Design.

The C16-G25Q GSM/GPS reference design is a complete and integrated solution for telematics applications such as fleet management, asset tracking, road pricing, and security/surveillance. It demonstrates the integration of u-blox' NEO-5Q GPS receiver with a LEON-G200 GPRS/GSM module. This 100% SMD solution uses SMT passive GPS (Taoglas SGP.25D) and GSM antenna (Taoglas PA.25A) and an on-board SIM Chip with activated phone number (SIM holder optional for mechanical (SIM).

On the test fixture of 63.2 x 50.03 mm (GND Plane) the antenna has a centre frequency of 1567MHz ± 3MHz

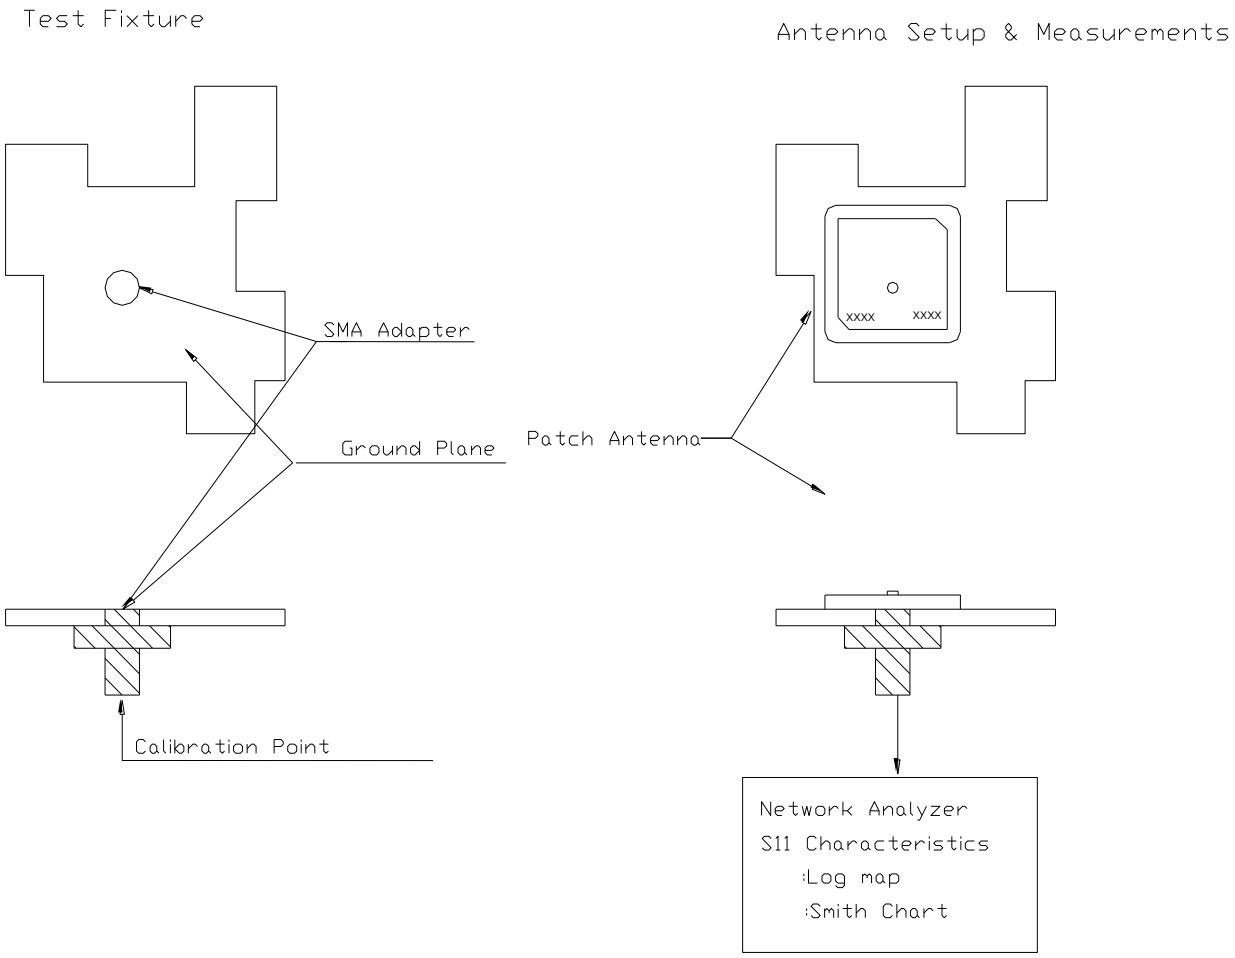
4.2 Test Fixture and Measurements



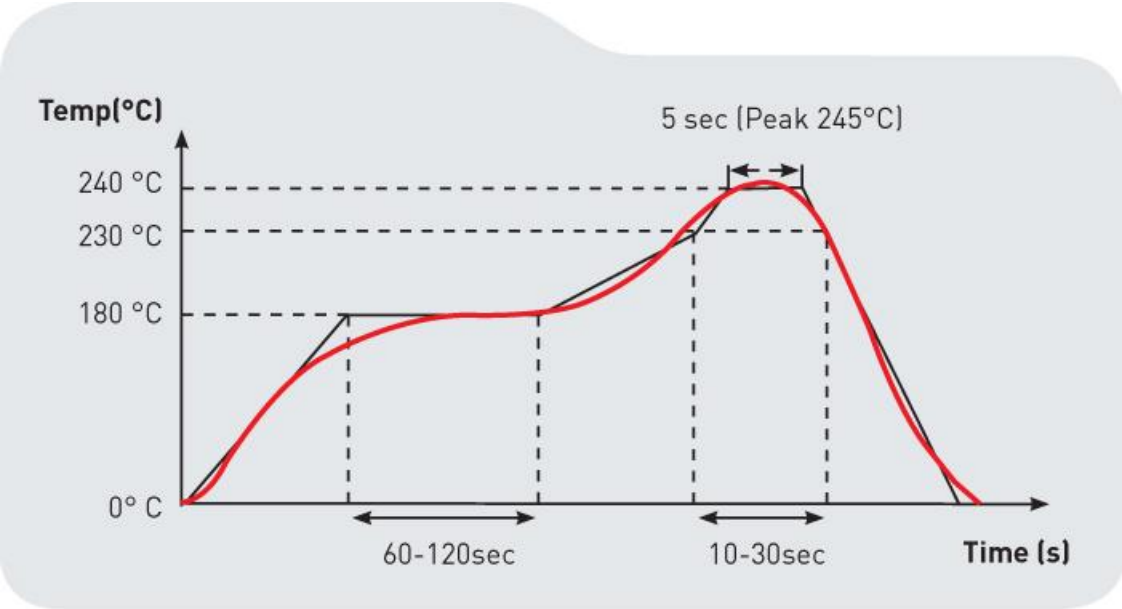
5. Antenna Recommended Soldering Conditions

5.1 Flux, Solder

- Use rosin-based flux. Don't use highly acidic flux with halide content exceeding 0.2wt%(chlorine conversion value).
- Use Sn solder.

5.2 Reflow soldering conditions

- Pre-heating should be in such a way that the temperature difference between solder and product surface is limited to 150℃ max. Cooling into solvent after soldering also should be in such a way that temperature difference is limited to 100℃ max. Unwrought pre-heating may cause cracks on the product, resulting in the deterioration of products quality.



5.3 Reworking with soldering iron

- The following conditions must be strictly followed when using a soldering iron.

Pre-heating	150°, 1 min
Tip temperature	290° max
Soldering iron output	30w max
Soldering time	3 second max
