1. Introduction

The Shockwave TLS.20.1F11 is a mechanically robust, waterproof, external antenna operating at 450-470MHz with 1 meter of low loss CFD-200 and SMA(M) connector. It has been designed to be used on a Ground Plane. Common applications are, for instance:

- Public safety
- Smart meters
- Mesh networks
- Transportation

The antenna has greater than 41% efficiency and -1.38 dBi peak gain within the application band on a 30x30 cm ground plane. Stable radiation patterns over low angles provide consistent gain in the horizontal plane, meaning that it is especially suitable for mesh networks or hot spots.

A unique indent tab on the base of the antenna allows a wrench to be used to solidly lock the antenna on top of its mounting location, where an N type female connector juts out from a metal panel. Waterproof O-rings around the bottom base prevent water from leaking under the antenna.

The TLS.20 antenna is IP67 waterproof and IP69K resistant against high pressure water jets in commercial cleaning environments, which makes the antenna ideal for 450-470MHz applications in harsh outdoor environments.
