1. Introduction

The Shockwave TLS.20.1F21 is a mechanically robust, waterproof, external antenna operating at the 450-470MHz with a N type (F) connector. It has been designed to be used on a ground plane.

Typical Applications Include:

- Public safety
- Smart meters
- Mesh networks
- Transportation

The antenna has greater than 46% efficiency and -2.6dBi peak gain with the application band on a 30x30 cm ground plane. Stable radiation patterns over low angles provide consistent gain in the horizontal plane, meaning that it is especially suitable for mesh networks or hot spots.

A unique indent tab on the base of the antenna allows a wrench to be used to solidly lock the antenna on top of its mounting location while tightening up the nut beneath the metal panel. Waterproof O-rings around the bottom base prevent water from leaking under the antenna.

The TLS.20 antenna is IP67 waterproof resistant against high pressure water jets in commercial cleaning environments, which makes the antenna ideal for 450-470MHz applications in harsh outdoor environments.

Cable lengths and connector types are customizable. Contact your regional Taoglas customer support team for further information.
