Description

TVDQSFPPSR4-1 transceiver is a Parallel 40Gbps Quad Small Form-factor, Hot-Pluggable optical module.

The module integrates 4 independent transmitters and 4 independent receivers inside. Four-channel 850nm VCSEL array, PIN array, amplifier and Driver are used in the module for compact size, low power consumption and low cost. Each channel can operate at 10Gbps up to 100m using OM3 fiber.

The transceiver is compliant to the industry standard SFF-8436 QSFP Transceiver Specification. Digital diagnostic function is provided to monitor the working state of the module. The electrical interface uses a 38 contact edge type connector. The optical interface uses an 8 or 12 fiber MTP (MPO) connector. TVDQSFPPSR4-1 transceiver features small size, parallel multi-channel, hot-pluggable, low power and high speed operation. It's very suitable for high speed short-distance density data connections such as 40GBASE-SR4, InfiniBand QDR, Switch & Route interconnects etc.

Notes:

[1] GND is the symbol for signal and supply (power) common for the QSFP+ module. All are common within the QSFP+ module and all module voltages are referenced to this potential unless otherwise noted. Connect these directly to the host board signal-common ground plane.

[2] Vcc Rx, Vcc1 and VccTx are the receiver and transmitter power supplies and shall be applied concurrently. Recommended host board power supply filtering is shown in Figure 7. VccRx, Vcc1 and VccTx may be internally connected within the QSFP+ Module in any combination. The connector pins are each rated for a maximum current of 500 mA
