F9H Series

High Temperature 150°C, Improved Reliability J-Lead

FEATURES

- Compliant to the RoHS2 directive 2011/65/EU
- Compliant to AEC-Q200
- Improved reliability FR=0.5%/1000hrs
- SMD J-lead

C CASE

Capacitance

Rated Voltage

(V)

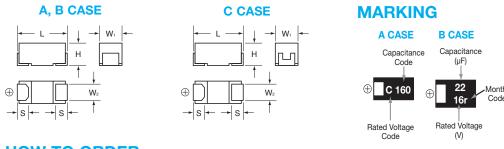

APPLICATIONS

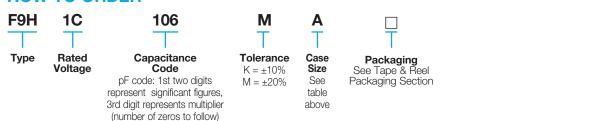

- Automotive electronics (Engine ECU, Transmission ECU, ISG, Head lamp)
- Industrial equipment

CASE DIMENSIONS: millimeters (inches)

Code	EIA Code	EIA Metric	L	W ₁ W ₂		Н	S

HOW TO ORDER

TECHNICAL SPECIFICATIONS

Category Temperature Range:	-55 to +150°C
Rated Temperature:	+105°C
Capacitance Tolerance:	±20%, ±10% at 120Hz
Dissipation Factor:	Refer to next page
ESR 100kHz:	Refer to next page
Leakage Current:	After 1 minute's application of rated voltage, leakage current at 20°C
	is not more than 0.01CV or 0.5µA, whichever is greater.
	After 1 minute's application of rated voltage, leakage current at 105°C
	is not more than 0.1CV or 5µA, whichever is greater.
	After 1 minute's application of derated voltage, leakage current at 150°C
	is not more than 0.125CV or 6.3μA, whichever is greater.
Capacitance Change By Temperature	+15% Max. at +150°C
	+10% Max. at +105°C
	-10% Max. at -55°C

Resistance soldering heat	±5
Surge	±5
Endurance	±10
Load Humidity	±10

#: "M" for $\pm 20\%$ tolerance, "K" for $\pm 10\%$ tolerance. Moisture Sensitivity Level (MSL) is defined according to J-STD-020.

QUALIFICATION TABLE

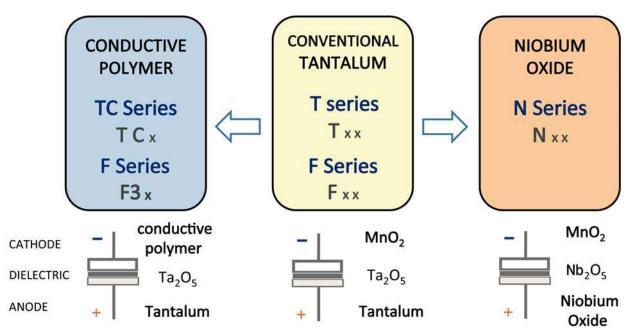

TEST	F9H series (Temperature range -55°C to +150°C)					
1231	Condition					
Damp Heat (Steady State)	At 85°C, 85% R.H., 1000 hours (No voltage applied) Capacitance Change Refer to page 118 (*1) Dissipation Factor					
Load Humidity	After 1000 hour's application of rated voltage in series with a 33Ω resistor at 85°C, 85% R.H., capacitors meet the characteristics requirements table below. Capacitance Change					
Temperature Cycles	At -55°C / +150°C, 30 minutes each, 1000 cycles Capacitance Change					
Resistance to Soldering Heat	10 seconds reflow at 260°C, 5 seconds immersion at 260°C. Capacitance Change					
Solderability	After immersing capacitors completely into a solder pot at 245°C for 2 to 3 seconds, more than 3/4 of their electrode area shall remain covered with new solder.					
Surge	After application of surge voltage in series with a 33Ω resistor at the rate of 30 seconds ON, 30 seconds OFF, for 1000 successive test cycles at 85°C, capacitors shall meet the characteristic requirements in the table above. Capacitance Change					
Endurance	After 2000 hours' application of rated voltage in series with a 3Ω resistor at 105°C, or derated voltage in series with a 3Ω resistor at 150°C, capacitors shall meet the characteristic requirements in the table above. Capacitance Change					
Shear Test	After applying the pressure load of 17.7N for 60 seconds horizontally to the center of capacitor side body which has no electrode and has been soldered beforehand on a substrate, there shall be found neither exfoliation nor its sign at the terminal electrode					
Terminal Strength	Keeping a capacitor surface-mounted on a substrate upside down and supporting the substrate at both of the opposite bottom points 45mm apart from the center of capacitor, the pressure strength is applied with a specified jig at the center of the substrate so that substrate may bend by1mm as illustrated. Then, there shall be found no remarkable abnormality on the capacitor terminals.					
Failure Rate	0.5% per 1000 hours at 105°C, V _R with 0.1Ω/V series impedance, 60% confidence level.
