## Warning

- 1. This Kyocera LCD module has been specifically designed for use only in electronic devices and industrial machines in the area of audio control, office automation, industrial control, home appliances, etc. The module should not be used in applications where the highest level of safety and reliability are required and module failure or malfunction of such module results in physical harm or loss of life, as well as enormous damage or loss. Such fields of applications include, without limitation, medical, aerospace, communications infrastructure, atomic energy control. Kyocera expressly disclaims any and all liability resulting in any way to the use of the module in such applications.
- 2. Customer agrees to indemnify, defend and hold Kyocera harmless from and against any and all actions, claims, damages, liabilities, awards, costs, and expenses, including legal expenses, resulting from or arising out of Customer's use, or sale for use, or Kyocera modules in applications.

#### Caution

1. Kyocera shall have the right, which Customer hereby acknowledges, to immediately scrap or destroy tooling for Kyocera modules for which no Purchase Orders have been received from the Customer in a two-year period.

## 1. Application

This document defines the specification of TCG104VGLAAAFA-AA00. (RoHS Compliant)

### 2. Construction and outline

LCD : Transmissive color dot matrix type TFT

Backlight system : LED

Polarizer : Anti-Glare treatment

Additional circuit : Timing controller, Power supply (3.3V input)

(without constant current circuit for LED Backlight)

Touch panel : Analog type, Anti-Glare treatment

### 3. Mechanical specifications

The horizontal display start timing is settled in accordance with a rising timing of ENAB signal.
 In case ENAB is fixed "Low", the horizontal start timing is determined.
 Don't keep ENAB "High" during operation.

Vertical sync. signal start position		TVs		34		line	
Vertical display p	period	TVd		480		line	

- 1) In case of lower frequency, the deterioration of the display quality, flicker etc., may occur.
- 2) CK count of each Horizontal Scanning Time should be always the same. Vertical invalid data period should be "n"  $\times$  "Horizontal Scanning Time". (n: integer) Frame period should be always the same.

## 8-2. Horizontal display position

- 1) When ENAB is fixed at "Low", the display starts from the data of C104(clock) as shown in 8-5.
- 2) The horizontal display position is determined by ENAB signal.

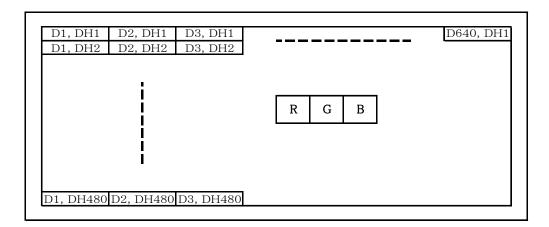

### 8-3. Vertical display position

- 1) The vertical display position (TVs) is 34th line.
- 2) ENAB signal is independent of vertical display position.

Operating life time	2), 3)	Т	-	100,000	-	h	IF=60mA, Ta=25°C

- 1) For each "AN-CA"
- 2) When brightness decrease 50% of minimum brightness.

  The average life of a LED will decrease when the LCD is operating at higher temperatures.
- 3) Life time is estimated data.(Condition: IF=60mA, Ta=25 $^{\circ}$ C in chamber).
- 4) An input current below 15mA may reduce the brightness uniformity of the LED backlight. This is because the amount of light from each LED chip is different. Therefore, please evaluate carefully before finalizing the input current.

#### 10. Design guidance for analog touch panel

- 10-1. Electrical (In customer's design, please remember the following considerations.)
  - 1) Do not use the current regulated circuit.
  - Keep the current limit with top and bottom layer.
     (Please refer to "Electrical absolute maximum ratings" for details.)
  - 3) Analog touch panel can not sense two points touching separately.
  - 4) A contact resistance is appeared at the touch point between top and bottom layer. After this resistance has stable read of the touch panel position data.
  - 5) Because noise of inverter or peripheral circuits may interfere signal of touch panel itself it is necessary to design carefully in advance to avoid these noise problem.

#### 10-2. Software

- 1) Do the "User Calibration".
- 2) "User Calibration" may be needed with long term using. Include "User Calibration" menu in your software.
- 3) When drawing a line with a stylus, there may be a slight discontinuity when the stylus passes over a spacer-dot. If necessary, please provide a compensation feature within your software.

#### 10-3. Mounting on display and housing bezel

- 1) Do not use an adhesive tape to bond it on the front of touch panel and hang it to the housing bezel.
- 2) Never expand the touch panel top layer (PET-film) like a balloon by internal air pressure. The life of the touch panel will be extremely short.
- 3) If a dew will be on the heat-sealed area or exposed traces at the end of a flexible tail, the migration of silver can occur. This will cause sometimes a short circuit.
- 4) Must maintain a gap between inside of bezel and touch panel to avoid malfunction or electrode damage of touch panel.

#### 11. Lot number identification

The lot number shall be indicated on the back of the backlight case of each LCD.

### 12. Warranty

### 12-1. Incoming inspection

Please inspect the LCD within one month after your receipt.

### 12-2. Production warranty

Kyocera warrants its LCD's for a period of 12 months from the ship date. Kyocera shall, by mutual agreement, replace or re-work defective LCD's that are shown to be Kyocera's responsibility.

Spec No.	Part No.	Page
TQ3C-8EAF0-E1YAG26-01	TCG104VGLAAAFA-AA00	12

#### 13. Precautions for use

#### 13-1. Installation of the LCD

- 1) Please ground either of the mounting (screw) holes located at each corner of an LCD, in order to stabilize brightness and display quality.
- 2) The LCD shall be installed so that there is no pressure on the LSI chips.
- 3) The LCD shall be installed flat, without twisting or bending.

#### 13-2. Static electricity

- 1) Since CMOS ICs are mounted directly onto the LCD glass, protection from static electricity is required.
- 2) Workers should use body grounding. Operator should wear ground straps.

#### 13-3. LCD operation

- 1) The LCD shall be operated within the limits specified. Operation at values outside of these limits may shorten life, and/or harm display images.
- 2) Please select the best display pattern based on your evaluation because flicker, lines or nonuniformity or unevenness can be visible depending on display patterns.

#### 13-4. Storage

- The LCD shall be stored within the temperature and humidity limits specified.
   Store in a dark area, and protect the LCD from direct sunlight or fluorescent light.
- 2) Always store the LCD so that it is free from external pressure onto it.

#### 13-5. Usage

- 1) <u>DO NOT</u> store in a high humidity environment for extended periods. Polarizer degradation bubbles, and/or peeling off of the polarizer may result.
- 2) Do not push or rub the touch panel's surface with hard to sharp objects such as knives, or the touch panel may be scratched.
- 3) When the touch panel is dirty, gently wipe the surface with a soft cloth, sometimes moistened by mild detergent or alcohol. If a hazardous chemical is dropped on the touch panel by mistake, wipe it off right away to prevent human contact.
- 4) Touch panel edges are sharp. Handle the touch panel with enough care to prevent cuts.
- 5) Always keep the LCD free from condensation during testing. Condensation may permanently spot or stain the polarizer.
- 6) Do not disassemble LCD because it will result in damage.
- 7) This Kyocera LCD has been specifically designed for use in general electronic devices, but not for use in a special environment such as usage in an active gas. Hence, when the LCD is supposed to be used in a special environment, evaluate the LCD thoroughly beforehand and do not expose the LCD to chemicals such as an active gas.
- 8) Please do not use solid-base image pattern for long hours because a temporary afterimage may appear. We recommend using screen saver etc. in cases where a solid-base image pattern must be used.
- 9) Liquid crystal may leak when the LCD is broken. Be careful not to let the fluid go into your eyes and mouth. In the case the fluid touches your body; rinse it off right away with water and soap.

- 1) Each test item uses a test LCD only once. The tested LCD is not used in any other tests.
- 2) The LCD is tested in circumstances in which there is no condensation.
- 3) The reliability test is not an out-going inspection.
- 4) The result of the reliability test is for your reference purpose only.

  The reliability test is conducted only to examine the LCD's capability.
