

Power Capacitor Assemblies

Overview

ABOUT KYOCERA AVX POWER ASSEMBLIES

KYOCERA AVX standard & custom Power Assemblies are fabricated from PARALLEL and SERIES combinations of industry-respected KYOCERA AVX catalog products. Customer requirements are addressed by a variety of computer matching and assembly techniques which have enabled KYOCERA AVX to extend voltage, current, ESR, Q, and tolerance parameters beyond what is normally available in the industry.

KYOCERA AVX Power Assemblies offer distinct advantages over purchasing standard components “in the general ballpark” and trying “hit & miss” approaches to configure & match these in a circuit environment. KYOCERA AVX’s strong tradition of quality and customer service enables us to work closely with design engineers to meet critical specifications.

PERFORMANCE ADVANTAGES

- High Operating Voltage
- High Operating Current
- Extended Capacitance
- Tighter Tolerances
- High Reliability
- High Q
- Ultra-low ESR

TYPICAL APPLICATIONS

- High Power RF
- Medical Electronics
- Broadcast
- Industrial Applications
- Semiconductor Manufacturing
- High Magnetic Environments
- Inductive Heating

BENEFITS OF UTILIZING POWER ASSEMBLIES

- **New price structure allows for more cost-effective assemblies.**
- **Reduced Assembly Steps / Handling Costs:**
Combinations of capacitors pre-packaged in manageable mechanical configurations for customer specific “drop-in” applications – Fits Every Time.
- **Enhanced Reliability:**
Overall elements and assemblies are 100% pre-tested to customer’s electrical requirements:
 - Capacitance – Q – IR – DWV (to 10kV max).
- **Reduced Purchasing Logistics:**
 - Reduced inventory requirements in matched assemblies
 - Elimination of excess, wasted parts
- **Reduced Technical Labor:**
Alleviate need for engineering and technician resources in selecting electrically matched elements.
- **Guaranteed Performance:**
KYOCERA AVX guarantees electrical / mechanical performance on an assembly level every time.
- **Achieve Non-Standard Values and Ultra-Tight Tolerances:**
KYOCERA AVX will “mix and match” values from our extensive inventory via computer matching programs to achieve any capacitor value specified by the designer.

KYOCERA AVX’s products provide many advantages to customers requiring multiple component capacitive sets and assemblies

Power Capacitor Assemblies

Capabilities

KYOCERA AVX offers both standard designs and custom products, including matched sets and voltage dividers. KYOCERA AVX Power Assemblies are available in two categories: Standard and Custom.

STANDARD ASSEMBLIES

Are those configurations most frequently specified by customers. Although it is not possible to stock finished assemblies, fabrication time is short, as the lead configurations and necessary tooling are readily available.

CUSTOM ASSEMBLIES

For those instances where our Standard Assemblies cannot be used, KYOCERA AVX will assist in the design of special configurations to meet customer needs. Special capacitor groupings and lead configurations can be provided to customer configurations.

NON-MAGNETIC ASSEMBLIES

To maintain assembly performance in high magnetic field environments, KYOCERA AVX provides a catalog option for termination materials with magnetic immunity.

MATCHED SETS

For designs that require close tolerance non-standard capacitance values, KYOCERA AVX offers parallel or series sets to match 2 or more capacitors to the exact value required.

VOLTAGE DIVIDERS

For those designs requiring capacitive voltage dividers, KYOCERA AVX can provide a set of capacitors that will satisfy customers' design parameters.

TYPICAL MECHANICAL CONFIGURATION

The following configurations represent frequently ordered catalog assemblies offered by KYOCERA AVX. The drawings depict a variety of mounting configurations, circuit attachment options and series/parallel combinations.

CUSTOM PACKAGING

KYOCERA AVX's **Applications Engineering** and **Mechanical Engineering** personnel are available to support your specific packaging needs.

STANDARD ASSEMBLY CONFIGURATIONS

KYOCERA AVX offers leaded assemblies that extend the capacitance, voltage and current parameters of our standard multilayer ceramic product line. As our standard products are the building blocks for each assembly, KYOCERA AVX's proven reliability, electrical and mechanical parameters become part of each assembly.

Assemblies of parallel grouped capacitors not only increase the capacitance but will exhibit ultra-low ESR. Assemblies of series grouped capacitors will allow both tighter tolerances and higher working voltages. Combinations of Parallel and Series assemblies can realize an increase in both capacitance and voltage rating. Assemblies can be composed of multiple capacitors in horizontal, vertical or multi-level mounting configurations.

All leaded assemblies are RoHS compliant.

Part Number Code

KYOCERA AVX POWER ASSEMBLY PART CODE

The part number consists of a base description plus an KYOCERA AVX drawing number. The final design will be based on customer requirements. All leaded assemblies are RoHS compliant

CAPACITANCE VALUE:

For capacitor values requiring only 2 significant digits:

3 digit code consists of 2 significant digits and a multiplier. The R is used for decimal values.

e.g. 17E151JVQX-1103D

Copper bracket assembly with two 100E pieces in parallel, with an end value of 150 pF, ±5% tolerance, 3600 WVDC, and marked with part number code.

For capacitor values requiring 3 significant digits:

3 digit code consists of first two significant digits and the third consisting of a letter representing the values 1 to 9.

e.g. 163E13EFYN*X-1028A

A = 1, B = 2, C = 3, D = 4, E = 5, F = 6, G = 7, H = 8, J = 9

Silver bracket assembly with three 100E pieces in series, non magnetic with an end value of 135 pF, ±1% tolerance, 10200 WVDC.

For capacitor values requiring more than 3 significant digits:

The capacitance code consists of the two most significant digits and an X, where "X" is separately defined.

e.g. 176E23XKVV-1447A

Copper bracket assembly with six 100E pieces in parallel, with an end value specified separately on the order. In this case it could be 2340 pF, ±10% tolerance, 2500 WVDC, and no marking.

Configurations and Special Test Options

CUSTOM ASSEMBLIES

For those requirements that can not be satisfied using standard assemblies, KYOCERA AVX offers custom designed assemblies. Special capacitor groupings, lead configurations and hole size/spacing can be supplied to meet customers' unique requirements. Consultation with the KYOCERA AVX Applications Engineering staff will ensure the selection of the proper capacitors for the job provided at a reasonable cost.

Example of 3 over 3 vertical mount construction.

MATCHED SETS: SERIES OR PARALLEL CONFIGURATIONS

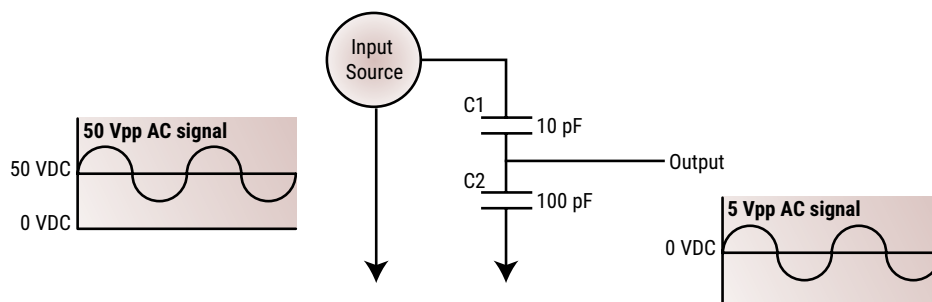

For customers requiring non-standard values or very close tolerance capacitance values, we can select a set of capacitors (2 or more) to achieve the desired results. The following tolerances are available:

Series	Capacitance Range	Tolerance
*100A/700A	1 pF to 6.2 pF 6.8 pF to 1000 pF	0.1 pF 0.5%
100B/700B	1 pF to 6.2 pF 6.8 pF to 1000 pF	0.1 pF 0.5%
100C	1 pF to 2700pF	0.5%
100E	1 pF to 5100 pF	0.5%

*See complete KYOCERA AVX Catalog for specifications

VOLTAGE DIVIDERS

Voltage dividers based on capacitive reactance can be provided to customers' specific capacitance ratio. Ratios can be provided within 1.0%. An example of a 10 to 1 ratio is shown below:

SPECIAL TEST OPTIONS

- For high reliability requirements, KYOCERA AVX can provide enhanced screening of the individual capacitors that comprise each assembly.
- Accelerated Life Testing and Voltage Conditioning: Individual parts are tested for 100 hours at elevated voltages and at 125°C.
