SURFACE MOUNT HIGH REPEATABILITY, BROADBAND TO-5 RELAYS DPDT

SERIES	RELAY TYPE
SGRF300	Repeatable, RF relay
SGRF303	Sensitive, repeatable, RF relay

DESCRIPTION

The ultraminiature SGRF300 and SGRF303 relays are designed to provide a practical surface-mount solution with improved RF signal repeatability over the frequency range. SGRF300 and SGRF303 relays feature a unique ground shield that isolates and shields each lead to ensure excellent contact-to-contact and pole-to-pole isolation. This ground shield provides a ground interface that results in improved highfrequency performance as well as parametric repeatability. The SGRF300 and SGRF303 extend performance advantages over similar RF devices that simply offer formed leads for surface mounting. These relays are engineered for use in RF attenuator, RF switch matrices, ATE and other applications that require dependable high frequency signal fidelity and performance.

The following unique construction features and manufacturing techniques provide excellent robustness to environmental extremes and overall high reliability:

- Uniframe motor design provides high magnetic efficiency and mechanical rigidity
- Minimum mass components and welded construction provide maximum resistance to shock and vibration
- Advanced cleaning techniques provide maximum assurance of internal cleanliness
- · Gold-plated precious metal alloy contacts ensure reliable switching
- Hermetically sealed

The SGRF300 and SGRF303 feature:

- High repeatability
- Broader bandwidth
- · Metal enclosure for EMI shielding
- · High isolation between control and signal paths
- High resistance to ESD

1 Million Cycle Repeatability ±0.1 dB from DC to 3GHz

RF NOTES

- One million cycle repeatability data is based upon 396 observations with an average repeatability ±0.033 dB and a range of ±0.093 dB.
- 2. Repeatability of attenuation values were obtained from tests conducted in a 20 dB attenuator network with a 0 dBm input signal.
- 3. Relay operates at frequencies higher than 3 GHz with reduced RF performance characteristics.
- 4. Curves were developed from tests performed on a 0.031" copper clad, reinforced PTFE circuit board at 20°C (ref). The unutilized contacts were terminated in 50 ohms; characteristic impedance of measuring equipment is 50 ohms. The relays were mounted flush to the circuit board ground plane without the relay header soldered to the ground plane.
