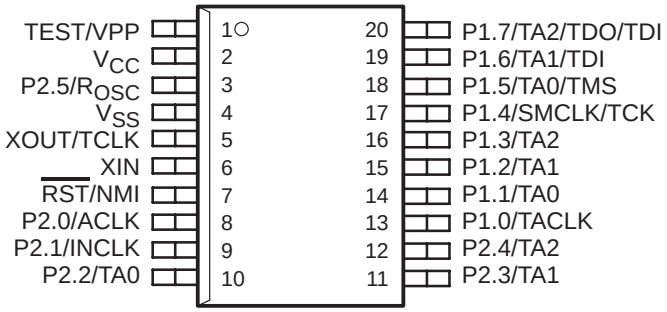
description

The Texas Instruments MSP430 family of ultralow power microcontrollers consist of several devices featuring different sets of peripherals targeted for various applications. The architecture, combined with five low power modes is optimized to achieve extended battery life in portable measurement applications. The device features a powerful 16-bit RISC CPU, 16-bit registers, and constant generators that attribute to maximum code efficiency. The digitally controlled oscillator (DCO) allows wake-up from low-power modes to active mode in less than 6μs.

DW PACKAGE
(TOP VIEW)



The MSP430x11x series is an ultra low-power mixed signal microcontroller with a built in 16-bit timer and fourteen I/O pins.

Typical applications include sensor systems that capture analog signals, convert them to digital values, and then process the data and display them or transmit them to a host system. Stand alone RF sensor front-end is another area of application.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

V_{SS}	4		Ground reference
XIN	6	I	Input terminal of crystal oscillator
XOUT/TCLK	5	I/O	Output terminal of crystal oscillator or test clock input

short-form description

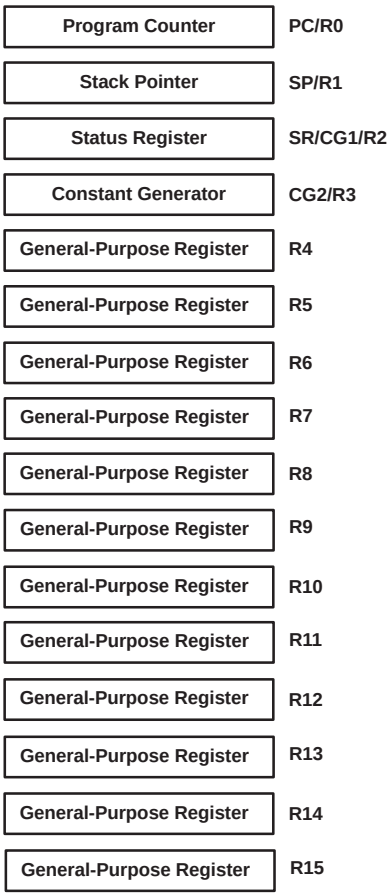
CPU

The MSP430 CPU has a 16-bit RISC architecture that is highly transparent to the application. All operations, other than program-flow instructions, are performed as register operations in conjunction with seven addressing modes for source operand and four addressing modes for destination operand.

The CPU is integrated with 16 registers that provide reduced instruction execution time. The register-to-register operation execution time is one cycle of the CPU clock.

Four of the registers, R0 to R3, are dedicated as program counter, stack pointer, status register, and constant generator respectively. The remaining registers are general-purpose registers.

Peripherals are connected to the CPU using data, address, and control buses, and can be handled with all instructions.



instruction set

The instruction set consists of 51 instructions with three formats and seven address modes. Each instruction can operate on word and byte data. Table 1 shows examples of the three types of instruction formats; the address modes are listed in Table 2.

Table 1. Instruction Word Formats

Dual operands, source-destination	e.g. ADD R4,R5	R4 + R5 −−−> R5
Single operands, destination only	e.g. CALL R8	PC −−>(TOS), R8−−> PC
Relative jump, un/conditional	e.g. JNE	Jump-on-equal bit = 0

Table 2. Address Mode Descriptions

ADDRESS MODE	S	D	SYNTAX	EXAMPLE	OPERATION
Register	●	●	MOV Rs,Rd	MOV R10,R11	R10 −−> R11
Indexed	●	●	MOV X(Rn),Y(Rm)	MOV 2(R5),6(R6)	M(2+R5)−−> M(6+R6)
Symbolic (PC relative)	●	●	MOV EDE,TONI		M(EDE) −−> M(TONI)
Absolute	●	●	MOV &MEM,&TCDAT		M(MEM) −−> M(TCDAT)
Indirect	●		MOV @Rn,Y(Rm)	MOV @R10,Tab(R6)	M(R10) −−> M(Tab+R6)
Indirect autoincrement	●		MOV @Rn+,Rm	MOV @R10+,R11	M(R10) −−> R11 R10 + 2−−> R10
Immediate	●		MOV #X,TONI	MOV #45,TONI	#45 −−> M(TONI)

NOTE: S = source D = destination

operating modes

The MSP430 has one active mode and five software selectable low-power modes of operation. An interrupt event can wake up the device from any of the five low-power modes, service the request and restore back to the low-power mode on return from the interrupt program.

The following six operating modes can be configured by software:

- Active mode AM;
  - All clocks are active
- Low-power mode 0 (LPM0);
  - CPU is disabled
    ACLK and SMCLK remain active. MCLK is disabled
- Low-power mode 1 (LPM1);
  - CPU is disabled
    ACLK and SMCLK remain active. MCLK is disabled
    DCO's dc-generator is disabled if DCO not used in active mode
- Low-power mode 2 (LPM2);
  - CPU is disabled
    MCLK and SMCLK are disabled
    DCO's dc-generator remains enabled
    ACLK remains active
- Low-power mode 3 (LPM3);
  - CPU is disabled
    MCLK and SMCLK are disabled
    DCO's dc-generator is disabled
    ACLK remains active
- Low-power mode 4 (LPM4);
  - CPU is disabled
    ACLK is disabled
    MCLK and SMCLK are disabled
    DCO's dc-generator is disabled
    Crystal oscillator is stopped

interrupt vector addresses

The interrupt vectors and the power-up starting address are located in the ROM with an address range of 0FFFFh-0FFE0h. The vector contains the 16-bit address of the appropriate interrupt handler instruction sequence.

INTERRUPT SOURCE	INTERRUPT FLAG	SYSTEM INTERRUPT	WORD ADDRESS	PRIORITY
Power-up, external reset, watchdog	WDTIFG (see Note1)	Reset	0FFFEh	15, highest
NMI, oscillator fault	NMIIFG, OFIFG (see Note 1)	(non)-maskable, (non)-maskable	0FFFCh	14
			0FFFAh	13
			0FFF8h	12
			0FFF6h	11
Watchdog Timer	WDTIFG	maskable	0FFF4h	10
Timer_A3	TACCR0 CCIFG (see Note 2)	maskable	0FFF2h	9
Timer_A3	TACCR1 and TACCR2 CCIFGs, TAIFG (see Notes 1 and 2)	maskable	0FFF0h	8
			0FFEEh	7
			0FFECh	6
			0FFEAh	5
			0FFE8h	4
I/O Port P2 (eight flags − see Note 3)	P2IFG.0 to P2IFG.7 (see Notes 1 and 2)	maskable	0FFE6h	3
I/O Port P1 (eight flags)	P1IFG.0 to P1IFG.7 (see Notes 1 and 2)	maskable	0FFE4h	2
			0FFE2h	1
			0FFE0h	0, lowest

NOTES: 1. Multiple source flags
2. Interrupt flags are located in the module
3. There are eight Port P2 interrupt flags, but only six Port P2 I/O pins (P2.0−5) are implemented on the ’11x devices.

special function registers

Most interrupt and module enable bits are collected into the lowest address space. Special function register bits that are not allocated to a functional purpose are not physically present in the device. Simple software access is provided with this arrangement.

interrupt enable 1

Address	7	6	5	4	3	2	1	0
0h				NMIIE			OFIE	WDTIE
				rw-0			rw-0	rw-0

WDTIE: Watchdog Timer interrupt enable. Inactive if watchdog mode is selected. Active if Watchdog Timer is configured in interval timer mode.
OFIE: Oscillator fault enable
NMIIE: (Non)maskable interrupt enable

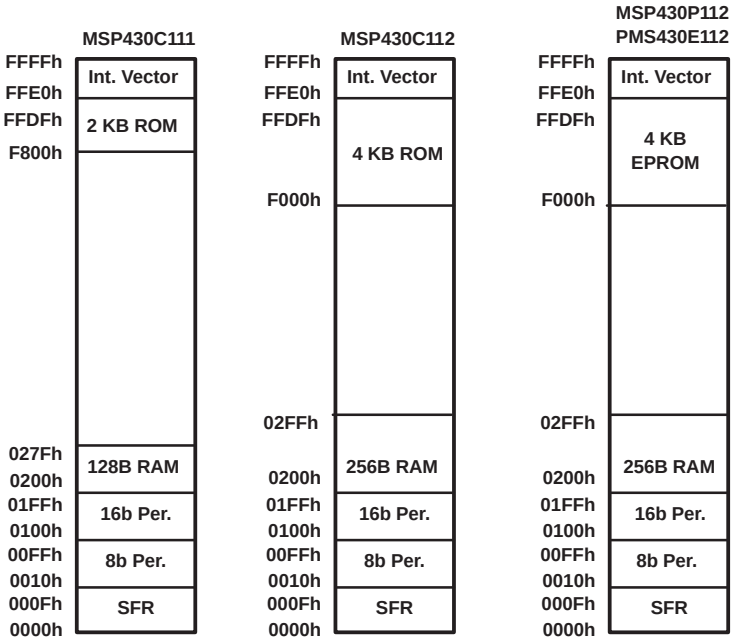
interrupt flag register 1

Address	7	6	5	4	3	2	1	0
02h				NMIIFG			OFIFG	WDTIFG
				rw-0			rw-1	rw-(0)

WDTIFG: Set on Watchdog Timer overflow (in watchdog mode) or security key violation. Reset on V_{CC} power-up or a reset condition at $\overline{RST}$/NMI pin in reset mode.
OFIFG: Flag set on oscillator fault
NMIIFG: Set via $\overline{RST}$/NMI-pin

Legend		
	rw:	Bit can be read and written.
	rw-0,1:	Bit can be read and written. It is Reset or Set by PUC
	rw-(0,1):	Bit can be read and written. It is Reset or Set by POR
		SFR bit is not present in device.

memory organization



peripherals

Peripherals are connected to the CPU through data, address, and control busses and can be handled using all instructions. For complete module descriptions, refer to the MSP430x1xx Family User's Guide, literature number SLAU049.

oscillator and system clock

The clock system is supported by the basic clock module that includes support for a 32768-Hz watch crystal oscillator, an internal digitally-controlled oscillator (DCO) and a high frequency crystal oscillator. The basic clock module is designed to meet the requirements of both low system cost and low-power consumption. The internal DCO provides a fast turn-on clock source and stabilizes in less than 6 μs. The basic clock module provides the following clock signals:

- Auxiliary clock (ACLK), sourced from a 32768-Hz watch crystal or a high frequency crystal.
- Main clock (MCLK), the system clock used by the CPU.
- Sub-Main clock (SMCLK), the sub-system clock used by the peripheral modules.

digital I/O

There are two 8-bit I/O ports implemented—ports P1 and P2 (only six P2 I/O signals are available on external pins):

- All individual I/O bits are independently programmable.
- Any combination of input, output, and interrupt conditions is possible.
- Edge-selectable interrupt input capability for all the eight bits of port P1 and six bits of port P2.
- Read/write access to port-control registers is supported by all instructions.

NOTE:
Six bits of Port P2, P2.0 to P2.5, are available on external pins − but all control and data bits for Port P2 are implemented.

watchdog timer

The primary function of the watchdog timer (WDT) module is to perform a controlled system restart after a software problem occurs. If the selected time interval expires, a system reset is generated. If the watchdog function is not needed in an application, the module can be configured as an interval timer and can generate interrupts at selected time intervals.

timer_A3

Timer_A3 is a 16-bit timer/counter with three capture/compare registers. Timer_A3 can support multiple capture/compares, PWM outputs, and interval timing. Timer_A3 also has extensive interrupt capabilities. Interrupts may be generated from the counter on overflow conditions and from each of the capture/compare registers.

absolute maximum ratings†

Voltage applied at V_{CC} to V_{SS} . . . . . −0.3 V to 6 V
Voltage applied to any pin (see Note) . . . . . −0.3 V to V_{CC}+0.3 V
Diode current at any device terminal . . . . . ±2 mA
Storage temperature, T_{stg} (unprogrammed device) . . . . . −55°C to 150°C
Storage temperature, T_{stg} (programmed device) . . . . . −40°C to 85°C

† Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTE: All voltages referenced to V_{SS}. The JTAG fuse-blow voltage, V_{FB}, is allowed to exceed the absolute maximum rating. The voltage is applied to the TEST pin when blowing the JTAG fuse.

$t_{(int)}$	External Interrupt timing	Port P1, P2: P1.x to P2.x, External trigger signal for the interrupt flag, (see Note 1)	3 V/ 5 V	1.5			cycle
			3 V	540			ns
			5 V	270			
$t_{(cap)}$	Timer_A, capture timing	TA0, TA1, TA2. (see Note 2)	3 V/ 5 V	1.5			cycle
			3 V	540			ns
			5 V	270			

NOTES: 1. The external signal sets the interrupt flag every time the minimum t_{int} cycle and time parameters are met. It may be set even with trigger signals shorter than t_{int}. Both the cycle and timing specifications must be met to ensure the flag is set.
2. The external capture signal triggers the capture event every time when the minimum t_{cap} cycles and time parameters are met. A capture may be triggered with capture signals even shorter than t_{cap}. Both the cycle and timing specifications must be met to ensure a correct capture of the 16-bit timer value and to ensure the flag is set.

outputs Port 1 to P2; P1.0 to P1.7, P2.0 to P2.5

PARAMETER		TEST CONDITIONS			MIN	NOM	MAX	UNIT
V_{OH}	High-level output voltage	$I_{(OH)}$ = − 1.5 mA,	V_{CC} = 3 V/5 V,	See Note 1	V_{CC}−0.4		V_{CC}	V
		$I_{(OH)}$ = − 4.5 mA,	V_{CC} = 3 V/5 V,	See Note 2	V_{CC}-0.6		V_{CC}	
V_{OL}	Low-level output voltage	$I_{(OL)}$ = 1.5 mA,	V_{CC} = 3 V/5 V,	See Note 1	V_{SS}		V_{SS}+0.4	V
		$I_{(OL)}$ = 4.5 mA,	V_{CC} = 3 V/5 V,	See Note 2	V_{SS}		V_{SS}+0.6	

NOTES: 1. The maximum total current, I_{OH} and I_{OL}, or all outputs combined, should not exceed ±12 mA to hold the maximum voltage drop specified.
2. The maximum total current, I_{OH} and I_{OL}, or all outputs combined, should not exceed ±36 mA to hold the maximum voltage drop specified.

optional resistors, individually programmable with ROM code (see Note 1)

PARAMETER		TEST CONDITIONS	MIN	NOM	MAX	UNIT
$R_{(opt1)}$	Resistors, individually programmable with ROM code, all port pins, values applicable for pulldown and pullup	V_{CC} = 3 V/5 V	2.1	4.1	6.2	kΩ
$R_{(opt2)}$		V_{CC} = 3 V/5 V	3.1	6.2	9.3	kΩ
$R_{(opt3)}$		V_{CC} = 3 V/5 V	6	12	18	kΩ
$R_{(opt4)}$		V_{CC} = 3 V/5 V	10	19	29	kΩ
$R_{(opt5)}$		V_{CC} = 3 V/5 V	19	37	56	kΩ
$R_{(opt6)}$		V_{CC} = 3 V/5 V	38	75	113	kΩ
$R_{(opt7)}$		V_{CC} = 3 V/5 V	56	112	168	kΩ
$R_{(opt8)}$		V_{CC} = 3 V/5 V	94	187	281	kΩ
$R_{(opt9)}$		V_{CC} = 3 V/5 V	131	261	392	kΩ
$R_{(opt10)}$		V_{CC} = 3 V/5 V	167	337	506	kΩ

NOTE 1: Optional resistors R_{optx} for pulldown or pullup are not programmed in standard OTP or EPROM devices MSP430P112 or PMS430E112.

electrical characteristics over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted) (continued)

PUC/POR

PARAMETER		TEST CONDITIONS		MIN	NOM	MAX	UNIT
$t_{(POR\_Delay)}$	POR		V_{CC} = 3 V/5 V		150	250	µs
V_{POR}		T_A = −40°C		1.5		2.4	V
		T_A = 25°C		1.2		2.1	V
		T_A = 85°C		0.9		1.8	V
$V_{(min)}$				0		0.4	V
$t_{(reset)}$	PUC/POR	Reset is accepted internally		2			µs

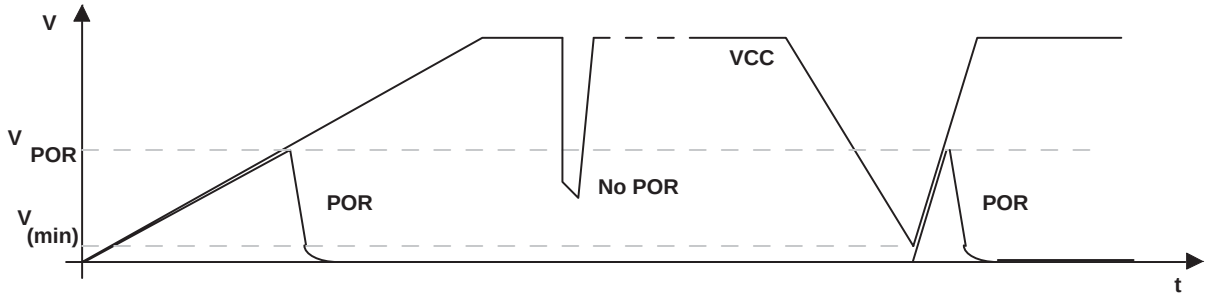

Figure 3. Power-On Reset (POR) vs Supply Voltage

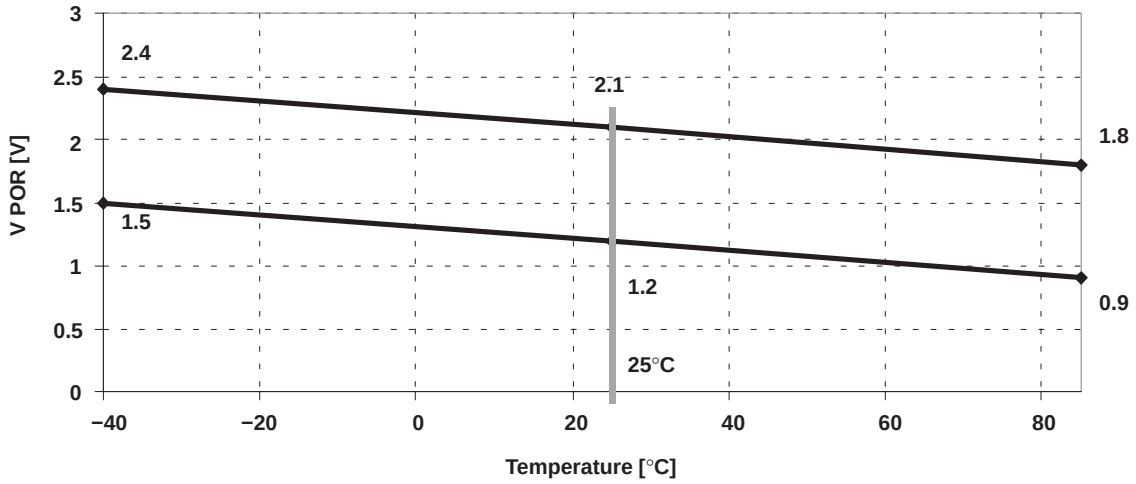

Figure 4. V_{POR} vs Temperature

electrical characteristics over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted) (continued)

wake-up from lower power modes (LPMx)

PARAMETER		TEST CONDITIONS		MIN	NOM	MAX	UNIT
$t_{(LPM0)}$/ $t_{(LPM2)}$	Delay time		V_{CC} = 3 V/5 V		100		ns
$t_{(LPM3)}$		R_{Sel} = 4, DCO = 3, MOD = 0	V_{CC} = 3 V/5 V		2.6	6	µs
$t_{(LPM4)}$		R_{Sel} = 4, DCO = 3, MOD = 0	V_{CC} = 3 V/5 V		2.8	6	µs

RAM

PARAMETER		MIN	NOM	MAX	UNIT
$V_{(RAMh)}$	CPU halted (see Note 1)	1.8			V

NOTE 1: This parameter defines the minimum supply voltage V_{CC} when the data in the program memory RAM remains unchanged. No program execution should happen during this supply voltage condition.

DCO (MSP430P112)

PARAMETER	TEST CONDITIONS		MIN	NOM	MAX	UNIT
$f_{(DCO03)}$	R_{sel} = 0, DCO = 3, MOD = 0, DCOR = 0, T_A = 25°C	V_{CC} = 3 V		0.12		MHz

NOTE 1: These parameters are not production tested.

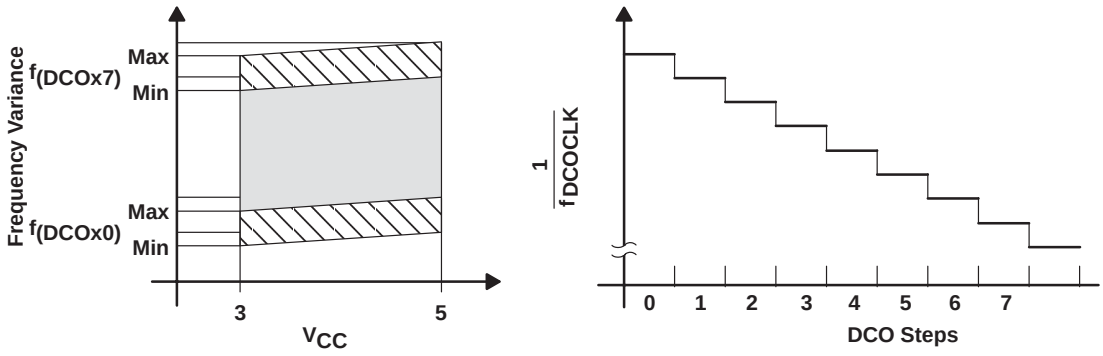

Figure 5. DCO Characteristics

electrical characteristics over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted) (continued)

main DCO characteristics

- Individual devices have a minimum and maximum operation frequency. The specified parameters for $f_{(DCOx0)}$ to $f_{(DCOx7)}$ are valid for all devices.
- All ranges selected by Rsel(n) overlap with Rsel(n+1): Rsel0 overlaps Rsel1, ... Rsel6 overlaps Rsel7.
- DCO control bits DCO0, DCO1, and DCO2 have a step size as defined by parameter S_{DCO}.
- Modulation control bits MOD0 to MOD4 select how often $f_{(DCO+1)}$ is used within the period of 32 DCOCLK cycles. The frequency $f_{(DCO)}$ is used for the remaining cycles. The frequency is an average equal to:

$$f_{average} = \frac{32 \times f_{(DCO)} \times f_{(DCO+1)}}{MOD \times f_{(DCO)} + (32 - MOD) \times f_{(DCO+1)}}$$

crystal oscillator, XIN, XOUT

PARAMETER		TEST CONDITIONS	MIN	NOM	MAX	UNIT
C_{XIN}	Capacitance at input	V_{CC} = 3 V/5 V		12		pF
C_{XOUT}	Capacitance at output	V_{CC} = 3 V/5 V		12		pF
V_{IL}	Input levels at XIN	V_{CC} = 3 V/5 V (see Note 2)	V_{SS}		$0.2 \times V_{CC}$	V
V_{IH}			$0.8 \times V_{CC}$		V_{CC}	

NOTES: 1. The oscillator needs capacitors at both terminals, with values specified by the crystal manufacturer.
2. Applies only when using an external logic-level clock source. Not applicable when using a crystal or resonator.

electrical characteristics over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted) (continued)

EPROM Memory, P- and E- versions only (see Note 1)

PARAMETER		TEST CONDITIONS	V_{CC}	MIN	NOM	MAX	UNIT
$V_{(PP)}$	Programming voltage, applied to TEST/VPP			12	12.5	13	V
$I_{(PP)}$	Current from programming voltage source					70	mA
$t_{(pps)}$	Programming time, single pulse			5			ms
$t_{(ppf)}$	Programming time, fast algorithm				100		µs
$P_{(n)}$	Number of pulses for successful programming			4		100	Pulse
$t_{(erase)}$	Erase time: Wave length 2537 Å at 15 Ws/cm^2 (UV lamp of 12 mW/ cm^2)			30			min
	Write/erase cycles			1000			cycles
	Data retention Tj < 55°C			10			Year

NOTES: 1. Refer to the Recommended Operating Conditions for the correct V_{CC} during programming.

JTAG Interface

PARAMETER		TEST CONDITIONS	V_{CC}	MIN	NOM	MAX	UNIT
f_{TCK}	TCK input frequency	see Note 1	3 V	DC		5	MHz
			5 V	DC		10	

NOTES: 1. f_{TCK} may be restricted to meet the timing requirements of the module selected.

JTAG Fuse (see Note 1)

PARAMETER		TEST CONDITIONS	V_{CC}	MIN	NOM	MAX	UNIT
V_{FB}	Fuse blow voltage, C versions (see Note 2)		3 V/ 5 V	5.5		6	V
	Fuse blow voltage, E/P versions (see Note 2)		3 V/ 5 V	11		13	
I_{FB}	Supply current into TEST/VPP during fuse blow					100	mA
t_{FB}	Time to blow fuse					1	ms

NOTES: 1. Once the fuse is blown, no further access to the MSP430 JTAG/Test and emulation features is possible. The JTAG block is switched to bypass mode.
2. The fuse blow voltage is applied to the TEST/VPP pin.

APPLICATION INFORMATION

input/output schematic

Port P1, P1.0 to P1.3, input/output with Schmitt-trigger

NOTES: 1. Optional selection of pullup or pulldown resistors with ROM (masked) versions.
2. Fuses for optional pullup and pulldown resistors can only be programmed at the factory.

APPLICATION INFORMATION

input/output schematic (continued)

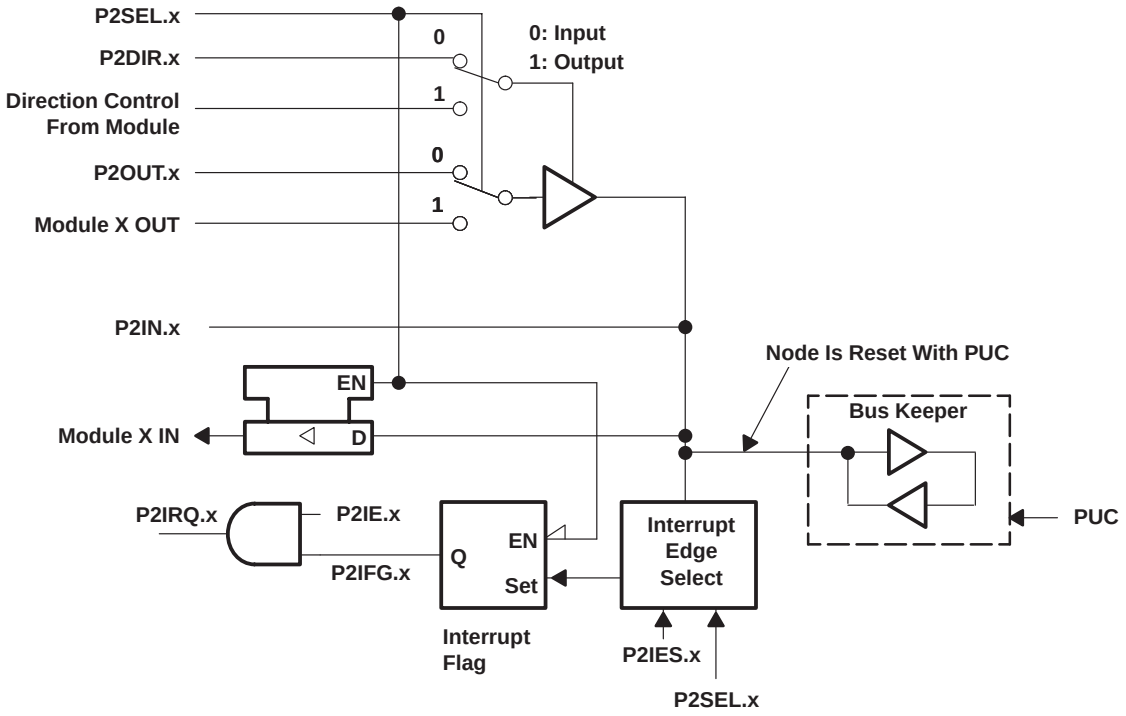
Port P2, un-bonded bits P2.6 and P2.7



NOTE: x = Bit identifier, 6 to 7 for Port P2 without external pins

P2Sel.x	P2DIR.x	Dir. Control from module	P2OUT.x	Module X OUT	P2IN.x	Module X IN	P2IE.x	P2IFG.x	P2IES.x
P2Sel.6	P2DIR.6	P2DIR.6	P2OUT.6	V_{SS}	P2IN.6	unused	P2IE.6	P2IFG.6	P2IES.6
P2Sel.7	P2DIR.7	P2DIR.7	P2OUT.7	V_{SS}	P2IN.7	unused	P2IE.7	P2IFG.7	P2IES.7

NOTE: A good use of the unbonded bits 6 and 7 of port P2 is to use the interrupt flags. The interrupt flags can not be influenced from any signal other than from software. They work then as soft interrupt.

APPLICATION INFORMATION

JTAG fuse check mode

MSP430 devices that have the fuse on the TEST terminal have a fuse check mode that tests the continuity of the fuse the first time the JTAG port is accessed after a power-on reset (POR). When activated, a fuse check current, I_{TF}, of 1 mA at 3 V, 2.5 mA at 5 V can flow from the TEST pin to ground if the fuse is not burned. Care must be taken to avoid accidentally activating the fuse check mode and increasing overall system power consumption.

When the TEST pin is taken back low after a test or programming session, the fuse check mode and sense currents are terminated.

Activation of the fuse check mode occurs with the first negative edge on the TMS pin after power up or if TMS is being held low during power up. The second positive edge on the TMS pin deactivates the fuse check mode. After deactivation, the fuse check mode remains inactive until another POR occurs. After each POR the fuse check mode has the potential to be activated.

The fuse check current will only flow when the fuse check mode is active and the TMS pin is in a low state (see Figure 6). Therefore, the additional current flow can be prevented by holding the TMS pin high (default condition).

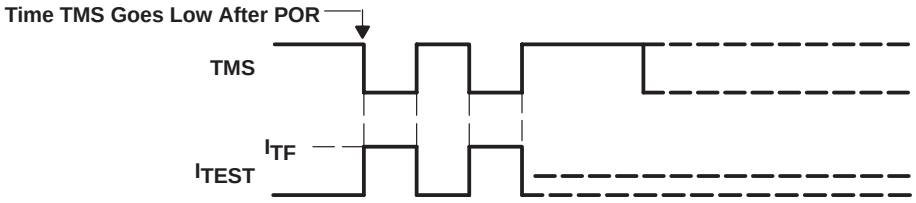


Figure 6. Fuse Check Mode Current, MSP430x11x

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.
TBD: The Pb-Free/Green conversion plan has not been defined.
Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.
Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.
Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

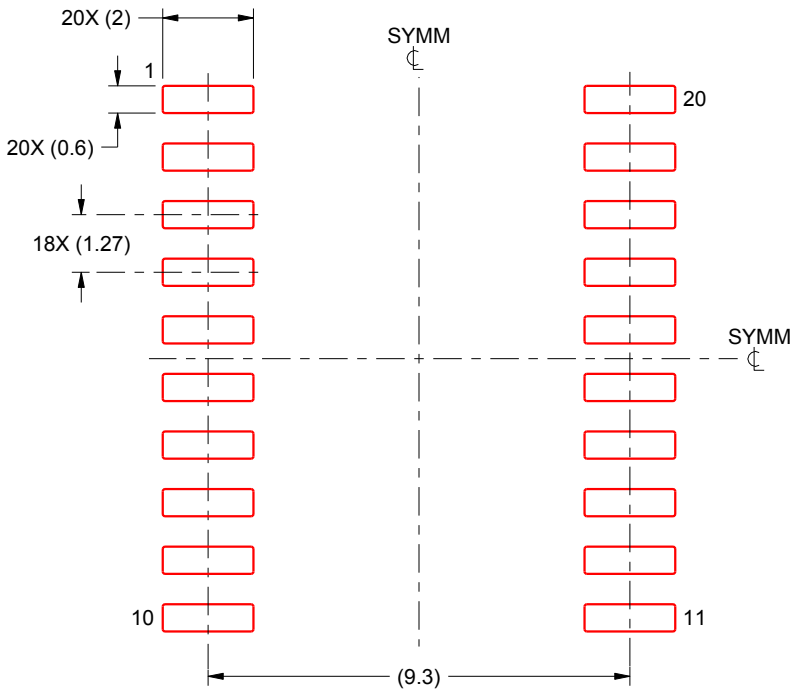
NOTES: (continued)

6. Publication IPC-7351 may have alternate designs.
7. Solder mask tolerances between and around signal pads can vary based on board fabrication site.



SOLDER PASTE EXAMPLE
BASED ON 0.125 mm THICK STENCIL
SCALE:6X

4220724/A 05/2016

NOTES: (continued)

8. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
9. Board assembly site may have different recommendations for stencil design.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as “components”) are sold subject to TI’s terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI’s terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers’ products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers’ products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI’s goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or “enhanced plastic” are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have ***not*** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
