TOSHIBA CMOS Linear Integrated Circuit Silicon Monolithic

TCR8BM series

800 mA CMOS Ultra Low Dropout Regulator

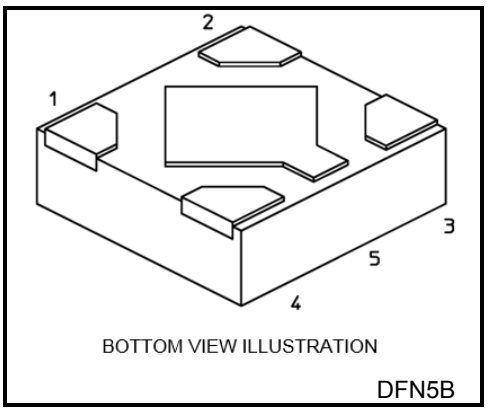
The TCR8BM series are CMOS single-output voltage regulators with an on/off control input, featuring ultra low dropout voltage, high PSRR, low inrush current and fast load transient response.

A differentiating feature is the use of a secondary bias rail as a reference voltage that allows ultra low dropout of 170 mV (Typ.) at I_{OUT} = 800 mA (1.1 V output, V_{BIAS} = 3.3 V).

These voltage regulators are available in fixed output voltages between 0.8 V and 3.6 V, and capable of driving up to 800 mA. Other features include overcurrent protection, thermal shutdown, and Auto-discharge.

The TCR8BM series are offered in the ultra small plastic mold package DFN5B (1.2 mm x 1.2 mm; t 0.38 mm).

As small ceramic input and output capacitors can be used with the TCR8BM series, these devices are ideal for portable applications that require high-density board assembly such as cellular phones.



Weight : 1.4 mg (Typ.)

Features

- Low dropout voltage
  V_{DO} = 170 mV (Typ.) at 1.1 V output, V_{BIAS} = 3.3 V , I_{OUT} = 800 mA
- Low stand-by current ($I_{BIAS(OFF)}$ = 1 μA (Max))
- Low quiescent bias current ($I_{BIAS(ON)}$ = 20 μA (Typ.) at V_{BIAS} = 5.5 V, I_{OUT} = 0 mA)
- Wide range output voltage line up (V_{OUT} = 0.8 to 3.6 V)
- Overcurrent protection
- Thermal shutdown
- Inrush current reduction
- Under voltage lockout (TCR8BMxxA products)
- Auto-discharge
- Pull down connection between CONTROL and GND
- Ultra small package DFN5B (1.2 mm x 1.2 mm ; t 0.38 mm)

Absolute Maximum Ratings (Ta = 25°C)

Characteristics	Symbol	Rating	Unit
Bias voltage	V_{BIAS}	-0.3 to 6.0	V
Input voltage	V_{IN}	-0.3 to 6.0	V
Control voltage	V_{CT}	-0.3 to 6.0	V
Output voltage	V_{OUT}	-0.3 to V_{IN} + 0.3 ≤ 6.0	V
Power dissipation	P_D	600 (Note 1)	mW
Junction temperature	T_j	-40 to 150	°C
Storage temperature range	T_{stg}	−55 to 150	°C

Note: Using continuously under heavy loads (e.g. the application of high temperature/current/voltage and the significant change in temperature, etc.) may cause this product to decrease in the reliability significantly even if the operating conditions (i.e. operating temperature/current/voltage, etc.) are within the absolute maximum ratings and the operating ranges.
Please design the appropriate reliability upon reviewing the Toshiba Semiconductor Reliability Handbook (“Handling Precautions”/“Derating Concept and Methods”) and individual reliability data (i.e. reliability test report and estimated failure rate, etc).

Note 1: Rating at mounting on a board
(Glass epoxy board dimension : 40 mm x 40 mm (4layer), t = 1.8 mm
Metal pattern ratio : approximately 70% each layer)

Operating Ranges

Characteristics	Symbol	Rating	Unit
Bias voltage	V_{BIAS}	(V_{OUT} + 1.4 ≥ 2.5) to 5.5	V
Input voltage	V_{IN}	V_{OUT} + V_{DO} to V_{BIAS}	V
Control voltage	V_{CT}	0 to V_{BIAS}	V
Output voltage	V_{OUT}	0.8 to 3.6	V
Output current	I_{OUT}	0 to 0.8 (Note 2)	A
Operation Temperature	T_{opr}	−40 to 85	°C
COUT	C_{OUT}	≥ 2.2 μF	—
CIN	C_{IN}	≥ 1.0 μF	—
CBIAS	C_{BIAS}	≥ 0.1 μF	—

Note 2: Do not operate at or near the maximum ratings of operating ranges for extended periods of time. Exposure to such conditions may adversely impact product reliability and results in failures not covered by warranty. Maximum operating ranges output current specification defined as lifetime average junction temperature of +45°C where max rated DC current = lifetime average current to avoid electro migration.

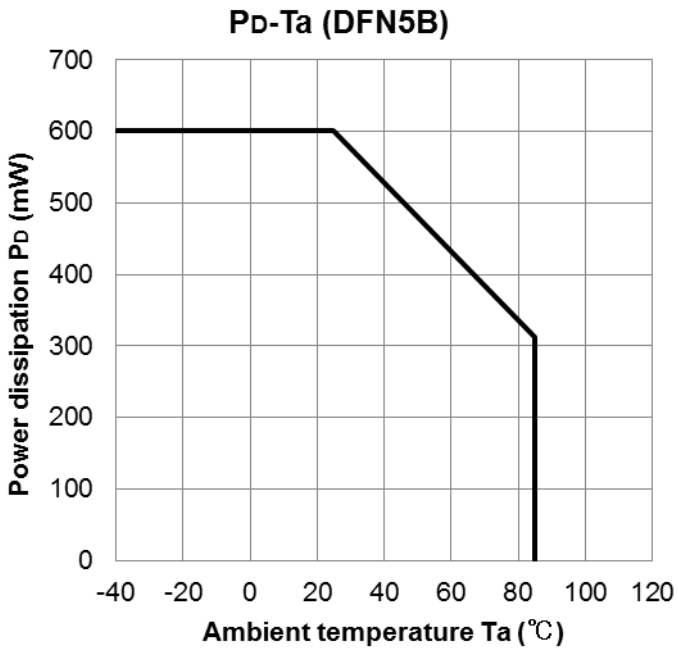
CONTROL voltage	Output voltage
HIGH	ON
LOW	OFF
OPEN	OFF

The figure above shows the Example of configuration for using a Low dropout regulator. Insert a capacitor at V_{IN}, V_{OUT} and V_{BIAS} pins for stable input/output operation. (Ceramic capacitors can be used).

2. Power Dissipation

Board-mounted power dissipation ratings for TCR8BM series are available in the Absolute Maximum Ratings table. Power dissipation is measured on the board condition shown in below.

[The Board Condition]
Board material: Glass epoxy (FR4)
Board dimension: 40 mm x 40 mm (4layer), t = 1.8 mm
Metal pattern ratio: approximately 70% each layer



Attention in Use

- Capacitors(Output, Input, and Bias Capacitor)
  Ceramic capacitors can be used for these devices. However, because of the type of the capacitors, there might be unexpected thermal features. Please consider application condition for selecting capacitors. For stable operation, please use over 1.0 μF input capacitor, 0.1 μF bias capacitor and 2.2 μF output ceramic capacitor.

- Recommending for Control Pin Operation
  This device is optimized to operate the best performance when turn on and off with control pin. Especially the rush current and bias current can be suppressed by using control pin after applying V_{IN} and V_{BIAS}.
  TCR8BMxxA products have V_{IN} under voltage lockout function, bias current is suppressed at low V_{IN} even when V_{BIAS} and V_{CT} are applied.

- Mounting
  The long distance between IC and output capacitor might affect phase compensation by impedance in wire and inductor. For stable power supply, output capacitor need to mount near IC as much as possible. Also V_{IN} and GND pattern need to be large and make the wire impedance small as possible.

- Permissible Loss
  Please have enough design patterns for expected maximum permissible loss. And under consideration of ambient temperature, input voltage, and output current etc, we recommend proper dissipation ratings for maximum permissible loss; in general maximum dissipation rating is 70 to 80 percent.

- Over current Protection and Thermal shut down function
  Over current protection and Thermal shut down function are designed in these products, but these are not designed to constantly ensure the suppression of the device within operation limits. Depending on the condition during actual usage, it could affect the electrical characteristic specification and reliability. Also note that if output pins and GND pins are not completely shorted out, these products might break down.
  When using these products, please read through and understand the concept of dissipation for absolute maximum ratings from the above mention or our ‘Semiconductor Reliability Handbook’. Then use these products under absolute maximum ratings in any condition. Furthermore, Toshiba recommends inserting failsafe system into the design.
