

### Features

- Low Noise and High Intercept Point
- Adjustable Bias Current
- Power Down Control
- Low Insertion Loss Bypass Feature
- 1.8V to 4V Operation (See Note: Page 2)
- 800MHz to 3.8GHz Operation
- ESD Class 1B

### Applications

- WiFi LNA with Bypass Feature
- CDMA PCS LNA with Bypass Feature
- GPS LNA with Bypass Feature
- General Purpose Amplification
- WiMAX LNA with Bypass Function
- CDMA 800 LNA
- CMMB LNA
- LTE Bands LNA

Functional Block Diagram

### Product Description

The RF2374 is a switchable low noise amplifier with a high dynamic range designed for digital cellular and WiFi applications. The device functions as an outstanding front end low noise amplifier with  $I_{CC}$  as low as 3mA. The bias current may be set externally. The IC is featured in a 2.2mmx2.2mmx0.6mm module-compatible plastic package.

## Absolute Maximum Ratings

Parameter	Rating	Unit
Supply Voltage	-0.5 to +6.0	V <sub>DC</sub>
Input RF Level at F < 2.3GHz	+5 (see note)	dBm
Input RF Level at F > 2.3GHz	+10 (see note)	dBm
Current Drain, I <sub>CC</sub>	32	mA
Operating Ambient Temperature	-40 to +85	°C
Storage Temperature	-40 to +150	°C

NOTE: Exceeding any one or a combination of the above maximum rating limits may cause permanent damage. Input RF transients to +15 dBm will not harm the device. For sustained operation at inputs  $\geq +5$  dBm, a small dropping resistor is recommended in series with the V<sub>CC</sub> in order to limit the current due to self-biasing to <32mA. Furthermore, while the LNA is in Bypass Mode, and for sustained operation at the input, +10 dBm is the maximum recommended power level for Frequencies above 2300MHz. +5 dBm is the maximum recommended power level for Frequencies <2300MHz.

**Caution** ESD sensitive device.

Exceeding any one or a combination of the Absolute Maximum Rating conditions may cause permanent damage to the device. Extended application of Absolute Maximum Rating conditions to the device may reduce device reliability. Specified typical performance or functional operation of the device under Absolute Maximum Rating conditions is not implied.

RoHS status based on EU Directive 2011/65/EU (at time of this document revision).

<b>Power Supply</b>					
Voltage ( $V_{CC}$ )		3		V	
Gain Select Low Level (High Gain Mode)			0.8	V	High Gain mode. Gain Select < 0.8V, $V_{REF}$ = 3V (typical)
Gain Select High Level (Bypass Mode)	1.6			V	Low Gain mode. Gain Select $\geq$ 1.6V, $V_{REF}$ : see bias note 2
Gain Select On/Off Time			<150	nSec	(C1 values range from 3 to 10pF), Temp = -40 °C to +85 °C, and over process
Power Down	0		5	$\mu$ A	Gain Select < 0.8V, $V_{REF}$ = 0V, $V_{CC}$ = 3.0V

Bias note: Due to the presence of ESD protection circuitry on the RF2374, the maximum allowable collector bias voltage (pin 6) is 4.0V. Higher supply voltages such as 5V are permissible if a series resistor is used to drop  $V_{CC}$  to  $\leq$ 4.0V for a given  $I_{CC}$ .

Bias note 2: In bypass mode,  $V_{REF}$  is essentially a "don't care" condition. Pulling  $V_{REF}$  low when in bypass mode does conserve the small 1mA to 2mA supplied by  $V_{REF}$ .

Pin	Function	Description	Interface Schematic
1	RF IN	RF input pin. This part is designed such that 50Ω is the optimal source impedance for best noise figure. Best noise figure is achieved with only a series capacitor on the input.	
2	GND1	Ground connection. For best performance, keep traces physically short and connect immediately to ground plane.	
3	VREF	For low noise amplifier applications, this pin is used to control the bias current. An external resistor can be used to set the bias current for any $V_{BIAS}$ voltage. This device will have good gain and noise figure with $I_{CC}$ as low as 3mA.	
4	GAIN SELECT	This pin selects high gain and bypass modes. Gain Select $\leq 0.8V$ , high gain. Gain Select $\geq 1.6V$ , low gain.	
5	GND2	See GND1.	
6	RF OUT	Amplifier output pin. This pin is an open-collector output. It must be biased to $V_{CC}$ through a choke or matching inductor.	
7	NC	Not connected.	
8	NC	Not connected.	
Pkg Gnd	GND	This pad should be connected to the ground plane by vias directly under the device.
