

RFSA3043 75Ω Voltage Controlled Attenuator (5 – 3000 MHz)

Product Overview

The RFSA3043 is a fully monolithic analog voltage-controlled attenuator (VCA) featuring exceptional linearity over a typical temperature compensated 30 dB gain control range. It incorporates a revolutionary new circuit architecture to solve a long-standing industry problem: high IP3, high attenuation range, low DC current, broad bandwidth and temperature compensated linear in dB control voltage characteristic. This voltage-controlled attenuator is controlled by a single positive control voltage with on-chip DC conditioning circuitry. The slope of the control voltage versus gain is selectable. The RFSA3043 draws a very low 2 mA current and is packaged in a small 3 mm x 3 mm QFN. This attenuator is matched to 75 Ω over its rated control range and frequency with no external matching components required.
