

RFCA8828

High Linearity, Push-Pull Amplifier 50MHz to 1200MHz

The RFCA8828 is a high performance broadband DOCSIS 3.1 MMIC amplifier designed with GaAs pHEMT technology optimized for low noise and high linearity. A Darlington configuration is utilized for broad-band performance with on-chip active bias circuit for consistent bias current and repeatable performance. The RFCA8828 contains two amplifiers used in push-pull configuration for excellent second and third order linearity performance.

Functional Block Diagram

rfmd⋙ RFCA8828

Package: SOIC-8

Features

- 5V or 6V Single Supply
- Excellent Linearity Performance at +34dBmV Output Power per Tone
- Two Amplifiers in SOIC-8 Package Simplify Push-Pull Configuration PC Board Layout
- Available in Lead-free, RoHS Compliant, and Green Packaging
- SOIC-8 Package
- 50MHz to 1200MHz operation supporting DOCSIS 3.1

Applications

- CATV Head End Driver and Pre-Driver Amplifier
- CATV Line Driver Amplifier

Ordering Information

RFCA8828SQ	Sample bag with 25 pieces
RFCA8828SR	7" Reel with 100 pieces
RFCA8828TR13	13" Reel with 2500 pieces
RFCA8828PCK-410	50MHz to 1200MHz PCBA with 5-piece sample bag

Absolute Maximum Ratings

Parameter	Rating	Unit
Max Device Current (I _D)	500	mA
Max Device Voltage (V _D)	7	V
Max RF Input Power	32	dBm
Max Channel Temperature (T _C)	160	°C
Storage Temperature	-40 to +85	°C

<mark>∕</mark> rfmd⋙

RFMD Green: RoHS status based on EU Directive 2011/65/EU (at time of this document revision), halogen free per IEC 61249-2-21, < 1000pm each of antimony trioxide in polymeric materials and red phosphorus as a flame retardant, and <2% antimony in solder.

Caution! ESD sensitive device.

Exceeding any one or a combination of the Absolute Maximum Rating conditions may cause permanent damage to the device. Extended application of Absolute Maximum Rating conditions to the device may reduce device reliability. Specified typical performance or functional operation of the device under Absolute Maximum Rating conditions is not implied.

Recommended Operating Condition

Paramotor	S	Unit		
	Min	Тур	Max	Offic
Operating Temperature Range	-40		+85	°C
Operating Junction Temperature			160	°C
Supply Voltage Range1 ^{1, 2}	5.7	6	6.3	V
Supply Voltage Range2 ^{1, 2}	4.75	5	5.25	V

Notes:

1. Operation of this device beyond any one of these limits may cause permanent damage. For reliable continuous operation, the device voltage and current must not exceed the maximum operating values specified in the Absolute Maximum Ratings Table above.

2. Bias conditions should also satisfy the following expression: $I_DV_D < (T_C - T_L) / R_{TH}$, j-l and $T_L = T_{LEAD}$

Nominal Operating Parameters

Devemeter	Specification			Unit	Condition

Evaluation Board Assembly Drawing 50MHz to 1200MHz Application Circuit

Pin Names and Descriptions

Pin	Name	Description					
1	RFIN1	RF input pin. External DC blocking capacitor is required					
2	VBIAS	Current adjust / NC in the application circuit					
3	GND	Connection to ground. Use via holes for best performance to reduce lead inductance as close to ground leads as possible					
4	RFIN2	RF input pin. External DC blocking capacitor is required					
5	RFOUT2/VCC	RF output and bias pin (open drain)					
6	GND	Connection to ground. Use via holes for best performance to reduce lead inductance as close to ground leads as possible					
7	GND	Connection to ground. Use via holes for best performance to reduce lead inductance as close to ground leads as possible					
8	RFOUT1/VCC	RF output and bias pin (open drain)					
EPAD	GND	Exposed area on the bottom side of the package must be soldered to the ground plane of the board for optimum thermal and RF performance. Several vias should be located under the EPAD as shown in the recommended land pattern.
