## **QPC6713** 50 MHz to 6000 MHz Digital Step Attenuator

### **Product Description**

The QPC6713 is a 7-bit digital step attenuator (DSA) that features high linearity over the entire 31.75 dB gain control range in 0.25 dB steps. The QPC6713 uses a serial control interface and has a low insertion loss of 1.7 dB at 2 GHz. The patented circuit architecture provides overshoot-free transient switching performance using a single +3 V to +5 V power supply. External address pins allow up to eight DSAs to be controlled on a single bus.

The QPC6713 is available in a standard lead-free, RoHScompliant 16 pad  $3 \times 3 \text{ mm}$  QFN package.

## **Functional Block Diagram**

16 Pad 3.0 mm x 3.0 mm x 0.85 mm QFN package

### **Product Features**

- 7-Bit, 31.75 dB Range, 0.25 dB Step
- Patented Circuit Architecture
- Overshoot-free Transient Switching Performance
- Frequency Range 50 MHz to 6000 MHz
- High Linearity, IIP3 > +55 dBm
- Serial Control Interface
- Fast Switching Speed, 50 nsec Typical
- Devices Serial Addressable Up to Eight
- Single Supply +3 V to +5 V Operation
- RF Pins with Zero DC Voltage, No Issue with DC Grounded Externally
- Power-up Default Setting Is Maximum Attenuation

## **Applications**

- 2G through 4G Base Stations
- Point-to-Point
- Wi-Fi
- Test Equipment

## **Absolute Maximum Ratings**

Parameter	Rating
Storage Temperature	−40 to +150 °C
Supply Voltage (VDD)	−0.5 to +6.0 V
All Other DC and Logic Pins (Supply Voltage Must Be Applied Prior to Any Other Pin Voltages)	−0.5 to +6.0 V
Input Power (RFIN Pin, +85°C Case Temp.)	+30 dBm
Input Power (RFOUT Pin, +85°C Case Temp.)	+27 dBm

Exceeding any one or a combination of the Absolute Maximum Rating conditions may cause permanent damage to the device. Extended application of Absolute Maximum Rating conditions to the device may reduce device reliability.

## **Evaluation Board Programming Using USB Interface**

#### Serial Addressable Mode

All programming jumpers on the evaluation board are set to the default values indicated in the table. Refer to the Control Bit Generator (CBG) Software Reference Manual for detailed instructions on how to setup the software for use. Apply the supply voltage to P1. Select 'QPC6713' from the RFMD parts list of the CBG user interface. Set the attenuation value using the CBG user interface. The attenuator is set to the desired state and measurement can be taken. Note that the external address bits must all be set to '0' when using the USB interface as the CGB software does not have the capability to set the external address in the serial data stream at this time.

### **Evaluation Board Programming Using External Bus**

#### Serial Addressable Mode

The configuration allows the user to control the attenuator through the P4 connector using an external harness. Remove the USB interface board if it is currently installed on the evaluation board. Connect a user-supplied harness to the P4 connector. Note that the top row of P4 contains the serial bus signals and the bottom row is ground. Programming jumper S1 is set to '0'. External address jumpers S2 through S4 can be set to any value desired by the user. Apply the supply voltage P1. Send the appropriate signals onto the serial bus lines in accordance with the Serial Mode Timing Diagram. The attenuator is set to the desired state and measurements can be taken.

### **Default Power-up State**

The default attenuation state is maximum (31.75 dB) when supply voltage is applied to the attenuator. The LE signal must be held to logic '0' during power up.

Notes:

1. All Dimensions in millimeters

## **PCB Mounting Pattern**

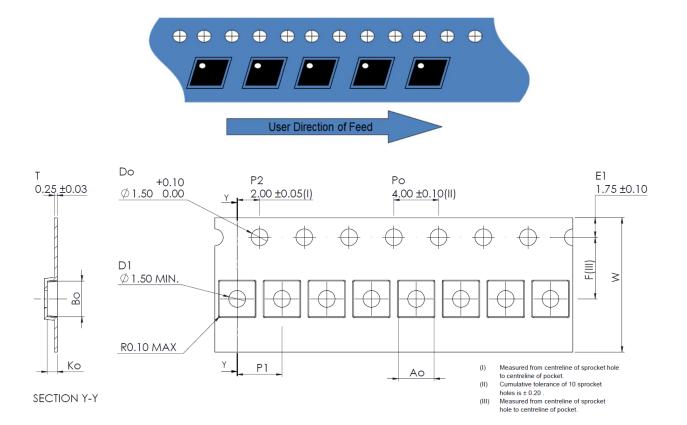

#### Notes:

- 1. All dimensions are in mm. Angles are in degrees.
- 2. A heat sink underneath the area of the PCB for the mounted device is recommended for proper thermal operation.
- 3. Ground / thermal via holes are critical for the proper performance of this device. Via holes should use a .35mm (#80 / .0135") diameter drill and have a final plated through diameter of .25 mm (.010").
- 4. Add as much copper as possible to inner and outer layers near the part to ensure optimal thermal performance.

### Solderability

Compatible with both lead-free (260°C max. reflow temp.) and tin/lead (245°C max. reflow temp.) soldering processes. Solder profiles available upon request.

Contact plating: Matte Tin

### **RoHS Compliance**

This part is compliant with 2011/65/EU RoHS directive (Restrictions on the Use of Certain Hazardous Substances in Electrical and Electronic Equipment) as amended by Directive 2015/863/EU.

This product also has the following attributes:

- Lead Free
- Halogen Free (Chlorine, Bromine)
- Antimony Free
- TBBP-A (C15H12Br402) Free
- PFOS Free
- SVHC Free
