Note 1: Test three specimens of tubing for low temperature flexibility as follows: Slide the tubing onto a stranded AWG wire (nearest AWG which will fit inside the tube). Condition the specimens and a mandrel, selected from Table 2, in a cold chamber for 4 hours at $-55 \pm 3^{\circ}\text{C}$ ($-67 \pm 5^{\circ}\text{F}$). After completion of the conditioning period and while still in the cold chamber at the specified temperature, bend the specimen around the mandrel through not less than 360 degrees in 10 ± 2 seconds. Visually examine the tubing for cracks.

Note 2: Six specimens, three 6-inch (150-mm) tubing specimens, which shall be weighed prior to immersion and shall be immersed in each of the test fluids listed at the temperature specified. The volume of the fluid shall not be less than 20 times that of the specimens. After conditioning, all the specimens shall be lightly wiped and air dried for 30 to 60 minutes at $23 \pm 3^{\circ}\text{C}$ ($73 \pm 5^{\circ}\text{F}$). The three specimens shall be reweighed after immersion and the weight change calculated as a percentage.
