

IQS620AEV02 Overview

Combination sensor with dual channel capacitive proximity/touch, Hall-effect sensor and inductive sensing

The IQS620A ProxFusion® IC is a multifunctional capacitance, Hall-effect & inductance sensor designed for applications where any or all of the technologies may be required. The IQS620A is an ultra-low power solution designed for short or long term activations through any of the sensing channels. The IQS620A is fully I²C compatible and can be configured to output main trigger events on GPIOs.

EV-Kit Overview

- Inductive sensing
- Hall-effect sensing
- Capacitive sensing

Evaluation Modes

- Connect to PC GUI via CT210A USB Dongle¹
- When connected to CT210A use 3.3V (default) only²
 - Raw info displayed in GUI
- Please ensure Shield Board³ is unplugged from Arduino Uno / ST Nucleo when connected to CT210A
- Plug into Arduino Uno¹ or ST Nucleo¹
 - Sensor info displayed on 7-segment
 - Open source code for custom development
- Embed the small module PCB (stamp) into custom design & interface to host MCU
(Additional modules sold separately as IQS620AEV01)

IQS620AEV02 Shield Board

**Detachable
Stamp Module**

IQS620A Shield + Arduino Uno¹

Applications

- Mobile electronics (phones/tablets)
- SAR safety requirements for laptops, tablets and phones
- Wearable devices, on ear detection
- White goods and appliances
- Human Interface Devices
- Proximity activated backlighting
- Applications with long-term activation
- Aftermarket automotive⁴

¹ Sold separately

² 1.8V not supported on Shield Board due to diode protection

³ Shield Board does not support programming

⁴ The part is not automotive qualified

Mouser Electronics
